1 Introduction

1.1 Context

This Site Establishment Management Plan (SEMP – the Plan) has been prepared by Great River City Light Rail (GRCLR) for the construction phase of the Supply, Operate and Maintain (SOM) package (Package 5) of the Parramatta Light Rail, which is referred as the 'Project' in this Plan.

Parramatta Light Rail (PLR) is a key element of the future transport network announced by the NSW Government. PLR will deliver a new light rail system for Western Sydney between Westmead and Carlingford via the Parramatta CBD and Camellia.

By providing connections to precincts and with transport hubs along the corridor, PLR will improve accessibility within the greater Parramatta precinct growth area as a key component of an integrated transport network supporting growth.

By 2026 approximately 28,000 people will use PLR every day and an estimated 130,000 people will be living within walking distance of light rail stops.

1.2 Background and project description

1.2.1 Parramatta Light Rail description

PLR will connect Westmead to Carlingford via Parramatta Central Business District (CBD) and Camellia. PLR is expected to be operational in 2023.

PLR will create new communities, connect great places and help both local residents and visitors move around and explore what the region has to offer. The route will link Parramatta's CBD and train station to a number of key locations, including the Westmead Precinct, the Parramatta North Growth Centre, the new Western Sydney Stadium, the Camellia Town Centre, the new Powerhouse Museum and Riverside Theatre arts and cultural precinct, the private and social housing redevelopment at Telopea, the Rosehill Gardens Racecourse and the three Western Sydney University campuses.

In summary, the key features include:

- A new dual track light rail network of approximately twelve (12) kilometres in length, including approximately seven (7) kilometres within the existing road corridor and approximately five (5) kilometres within the existing Carlingford Line and Sandown Line, replacing current heavy rail services
- Sixteen (16) stops that are fully accessible and integrated into the urban environment including a terminus stop at each end of Westmead and Carlingford
- High frequency 'turn-up-and-go' services operating seven days a week from 5am to 1am.
 Weekday services will operate approximately every 7.5 minutes in the peak period between 7am and 7pm
- Modern and comfortable air-conditioned light rail vehicles, nominally 45 metres long and driver-operated, each carrying up to 300 passengers.
- Intermodal interchanges with existing public transport services at Westmead terminus,
 Parramatta CBD and the Carlingford terminus
- Creation of two light rail and pedestrian zones (no general vehicle access) within the Parramatta CBD along Church Street (generally between Market Street and Macquarie Street) and along Macquarie Street (generally between Horwood Place and Smith Street)

- A Stabling and Maintenance Facility (SaMF) located in Camellia for light rail vehicles to be stabled, cleaned and maintained
- New bridge structures along the alignment including over James Ruse Drive and Clay Cliff Creek, Parramatta River (near the Cumberland Hospital), Kissing Point Road and Vineyard Creek, Rydalmere
- Alterations to the existing road network including line marking, additional traffic lanes and turning lanes, new traffic signals, and changes to traffic flows
- · Relocation and protection of existing utilities
- Public domain and urban design work along the corridor and at Stop precincts
- Closure of the heavy rail line between Carlingford and Clyde
- Active transport corridors and additional urban design features along sections of the alignment and within Stop precincts
- Integration with the Opal Electronic Ticketing System (ETS)
- Real time information in light rail vehicles and at Stops via visual displays and audio.

An overview of PLR route is shown in Figure 1-1.

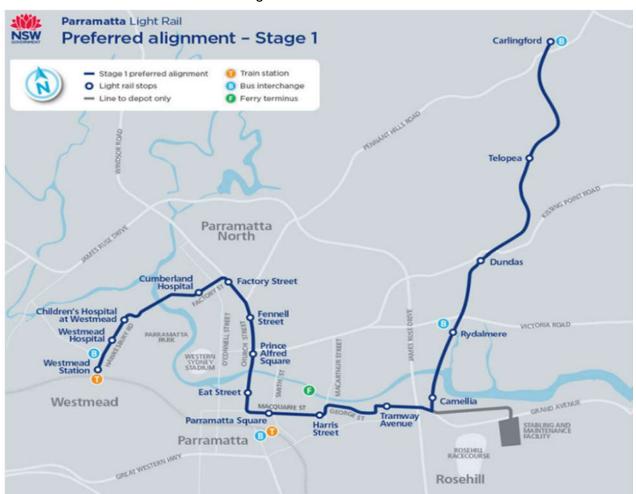

Figure 1-1 PLR Route

1.2.2 Statutory context

The PLR is a Critical State Significant Infrastructure (CSSI) Project, approved by the Minister for Planning on 29 May 2018, under Section 5.19 of the *Environmental Planning and Assessment Act* 1979 (EP&A Act). An Environmental Impact Statement (EIS) was prepared as part of the Infrastructure Application (SSI-8285) as was a Preferred Infrastructure Report (PIR) following public exhibition of the EIS, covering the works identified in section 1.2 of this SEMP.

The Infrastructure Approval has subsequently been modified twice under Section 5.25 of the EP&A Act, with approvals issued on 21 December 2018 and 25 January 2019 respectively. The modifications related to changes to Conditions of Approval (CoAs) not the physical description of the project.

The Infrastructure Approval, modifications and related environmental assessment documents can be found at: http://majorprojects.planning.nsw.gov.au/index.pl?action=view_job&job_id=8285.

1.2.3 Staging of PLR Works

The PLR comprises approximately 12km alignment from Westmead to Carlingford via Camellia and consists of a mix of both on-street and dedicated corridor.

PLR is being delivered under five delivery packages as detailed in the Staging Report:

- Enabling Works (Package 1) Local road network improvements including O'Connell Street and George Street (off-alignment).
- Westmead Precinct Works (**Package 2**) Hawkesbury Road widening and demolition at Cumberland Hospital (east and west Campus).
- Early Works (**Package 3**) Remediation of the SaMF site.
- Infrastructure Works (**Package 4**) Design and construction of civil works, public domain and light rail infrastructure up to road level/top of rail and to the top of the concrete slab at stops, including provision of utility services (excluding high-voltage power supply and cabling for rail systems), and decommissioning of the T6 Carlingford Line.
- Supply Operate and Maintain Works (**Package 5**) The Project (subject of this Plan) Design and construction of the light rail systems, high-voltage power supply and stops above slab level, the supply of light rail vehicles, and the design and construction of the SaMF, including all light rail operations, customer service and asset management.

Each package of work is to be delivered under separate contracts on behalf of the proponent Transport for NSW (TfNSW). While the packages will commence at different times under separate construction approvals, there will be periods during which the packages works will overlap. The interactions between the packages are shown in Figure 1-2.

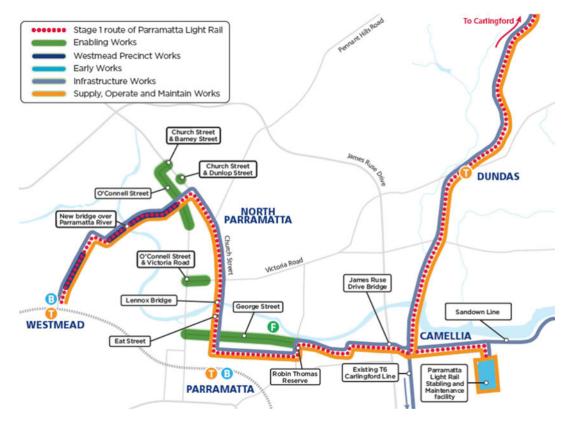

Figure 1-2: Parramatta Light Rail Delivery Package Interface

1.3 Supply, Operate and Maintain Contract (Package 5) Overview

As System Integrator for PLR, the SOM Contractor's Activities include:

- Delivery Activities
- Light Rail Vehicles (LRV) Procurement
- Operation and Maintenance (O&M).

The delivery activities include all investigation, selection, specification, design, approvals, construction, manufacture, installation, testing & commissioning, operational readiness and activities to transition from the Delivery Phase to the Operations Phase.

In summary works include:

- All works above and additional to the platform concrete foundation slab at all Stops
- SaMF
- Central Control System
- Light Rail signalling system
- Elements of the road intersection signalling system
- Communications and passenger information systems
- Power Supply system
- Procurement of LRV
- Maintenance plant and machinery for the LRVs
- Earthing & bonding, electrolysis and electromagnetic compatibility.

An Operational Environment Management Plan (or Environmental Management System) would be prepared for the O&M stage, in accordance with CoAs D1 and D2.

1.3.1 SOM Roles and Responsibilities

GRCLR is responsible for the delivery of the SOM Works for PLR. GRCLR has sub-contracted out the Supply component of these works to Construcciones y Auxiliar de Ferrocarriles (CAF). CAF has engaged Thales, GE and Laing O'Rourke Australia (LORAC) to undertake the design and construction responsibilities associated with the Supply component of the works, which includes design and construction related activities including testing and commissioning, and excludes all operational and maintenance activities.

GRCLR is the owner of this document and is responsible for ensuring implementation of and compliance within this Plan by all subcontractors in accordance with the GRCLR management systems. For the purposes of terminology within this SEMP, GRCLR is responsible for the delivery of the entirety of SOM scope of works.

Figure 1-3 further details these and other contractual arrangements.

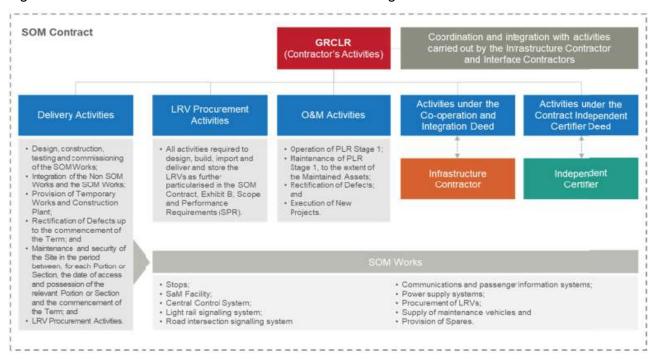

Figure 1-3: SOM contract activities for PLR (the Project)

1.4 Scope of the Plan

This SEMP covers the establishment, operation and decommissioning of the following ancillary facilities required for delivery of the Project:

- 6 Grand Avenue, Camellia (on the Stabling and Maintenance (SAM) Facility site)
- 8 Colquhoun Street, Rosehill.

This Plan has been prepared in accordance with CoA C18 and addresses the Revised Environmental Management and Mitigation Measures (REMMMs) and Environmental Performance Outcomes (EPOs), relevant to the establishment of the ancillary construction facilities contained within.

The Infrastructure Approval defines an ancillary facility as:

"A temporary facility for construction of the project, including an office and amenities compound, construction compound, material crushing and screening plant, materials storage compound, maintenance workshop, testing laboratory, material stockpile area, car parking compound and truck marshalling facility".

The EIS identified and assessed several sites required for the delivery of the PLR, however the sites covered by this SEMP are not included in the EIS as one of the primary construction compounds identified in Section 6, Figures 6.2a to 6.2h. The EIS anticipates at Section 6.12 the number and location of construction compounds may change during detailed design and any such change would be the subject of a Consistency Assessment against the Planning Approval. This SEMP will be updated to include the approved ancillary facilities prior to establishment, as and if required.

Appendix H of this SEMP includes a summary consistency assessment for the sites included in this SEMP, which has addressed how the identified sites address the factors identified in the EIS for selection of viable construction sites. A thorough Consistency Assessment in the TfNSW standard template has been submitted to TfNSW, containing further detail, for review, and approvalby TfNSW separate and apart from this SEMP. If required, it will be appended here at Appendix J.

Sections 3.2, 3.3 and 3.4 provide compliance tables identifying where in this Plan relevant requirements are addressed.

All GRCLR staff and sub-contractors are required to operate fully under the requirements of this Plan and any relevant Construction Environmental Management Plans (CEMPs).

1.5 Relationship with Relevant Works Packages

1.5.1 Infrastructure Contractor – Parramatta Connect (Package 4)

The Infrastructure Works is closely aligned to the SOM Works. A graphical representation of the split in scope between the two packages is depicted in Figure 1-4. The reason for dividing this work into two packages is to ensure that suitably qualified and experienced sub-contractors are in place for each specialised component; civil infrastructure, and operational systems. The Infrastructure Works will deliver the civil infrastructure components and will not trigger the operational conditions, except for those that relate to detailed design.

An interface between the two packages has been established to monitor cumulative impacts and the coordination of environmental complaints management, site management controls, and the delineation of incident reporting and non-compliance management.

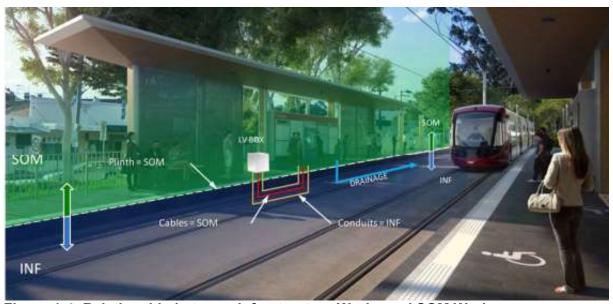

Figure 1-4: Relationship between Infrastructure Works and SOM Works

1.5.2 Remediation Contractor – Ventia (Package 3)

The SOM contract is dependent on the completion of the remediation works at the SaMF site, by the remediation contractor.

The SaMF site is subject to historical contamination and is a listed contaminated site by the Environment Protection Authority (EPA). The works have been split to ensure that appropriately qualified contractor, experienced in remediating heavily contaminated sites, is managing the remediation of the site. The remediation contractor will complete their works and provide GRCLR a remediated site, complete with a site audit statement, and supporting management documentation, fit for purpose for site establishment, construction and operational activities associated with PLR.

The remediation works will deliver the remediated site, including any details of any ongoing management requirements, and will not trigger the construction and operational conditions, except for those that relate to detailed design. The Remediation Contractor will provide GRCLR with a Long Term Environmental Management Plan (LTEMP) for the SaMF, the LTEMP will include all construction, operation, management, maintenance and monitoring requirements for the SaMF. GRCLR will implement the requirements relevant to the construction of the Stabling and Maintenance facility.

Ongoing management for the remedial works on the SaMF site will be implemented through the LTEMP which will be approved by the Site Auditor, as part of the issuing of the Site Audit Statement (SAS) for the site. The LTEMP will be a stand-alone document, and all monitoring and reporting will be managed through the processes and procedures in the LTEMP, and not through the CEMP.

An interface between the two packages has been established to ensure the remediated site meets the design requirements for the construction, operation and maintenance of the site.

1.6 Environmental management systems overview

The ancillary facilities will be managed in accordance with the GRCLR Integrated Management System (IMS) which includes an Environmental Management System (EMS). The EMS will be adopted as the guiding environmental management framework for the Project. The EMS is compliant with AS/NZS ISO 14001:2015. The EMS is integrated with the GRCLR IMS which includes assurance, quality and health and safety, management systems

The EMS will guide the development of the Project's governance documentation, including this SEMP, the CEMP and associated sub-plans, procedures and management tools to achieve the commitments and intentions established by the GRCLR Environment and Sustainability Policy, to ensure environmental performance and sustainability objectives and targets are achieved.

All works carried out on the site will be in accordance with:

- Infrastructure Approval SSI-8285
- REMMMs
- EPOs
- AS/NZ ISO 14001
- All applicable legislation
- Project Deed
- · GRCLR IMS.

1.6.1 Construction Environmental Management Plan

A CEMP will be prepared for the SOM contract (Package 5). This CEMP provides the system to manage and control the environmental aspects of the SOM contract (Package 5) during

construction. It also provides the overall framework for the system and procedures to ensure environmental impacts are minimised and legislative and other requirements are fulfilled.

The CEMP will be endorsed by the ER and provided to the Secretary for approval at least one month prior to the commencement of construction. In accordance with CoA C8 construction will not commence until the CEMP and the sub plans specified in CoA C3 are approved by the Secretary or provided to the Secretary for information (as required by CoA C3).

1.6.2 Environment Management Sub Plans

Subject-specific environmental management sub-plans will be prepared to support the CEMP. These documents are prepared to identify requirements and processes applicable to specific impacts or aspects of the SOM contract (Package 5). They address the relevant requirements of the CoAs, REMMMs and EPOs. A list of construction sub-plans for the SOM contract (Package 5) and their approval requirements are provided in Table 1.1.

The establishment of construction ancillary facilities will be done in accordance with CoA C18 and the Site Establishment Management Plan.

2 Purpose and objectives

2.1 Purpose

The purpose of this Plan is to describe how GRCLR proposes to assess and manage the establishment and decommissioning of the ancillary facilities during construction of the Project.

The operation of each ancillary facility will be undertaken in accordance with the CEMP and associated sub-plans. No construction works (as defined in the CoA and referred to in this SEMP as the 'operation' of the ancillary facility) will be undertaken prior to the approval of the CEMP.

2.2 Objectives

The key objectives of the Plan are to ensure that impacts caused by ancillary facilities are minimised within the scope permitted by the Infrastructure Approval. To achieve this objective, the following will be undertaken:

- Identify the types of ancillary facilities required for the delivery of the Project and the timing associated with the establishment, operation and decommissioning of facilities
- Describe the proposed activities, hours of operation, staging and types of plant, equipment and materials to be stored on site
- Describe the existing environment and potential environmental impacts associated with construction and operation of the facility
- Identify mitigation, monitoring and management procedures specific to the ancillary facilities, and the implementation of these procedures
- Ensure appropriate measures are implemented to address the CoA as well as relevant requirements (REMMMs and EPOs) from the EIS (See section 3 of this SEMP)
- Provide a framework for the assessment and approval of additional ancillary facilities taking into account amenity of neighbouring properties and environmental impacts.

2.3 Targets

The following targets have been established for the management of impacts resulting from the operation of the ancillary facilities during construction of the Project:

Establishment

 Establish all controls as per the environmental control maps (ECM) and set out in this Plan prior to establishment

Decommissioning

Decommission within 6 weeks of completion of the construction works

Ensure full compliance with the CoA and REMMMs

Zero non-conformances against CoA and REMMMs

Minimise any impacts on the surrounding sensitive receivers

- Responding to noise and vibration complaints within 2 hours of complaint being received on the 24-hour phone line
- Zero sediment runoff from stockpiles into watercourses and drains

No unapproved harm to surrounding trees

Minimise impacts and reduce risks to traffic, pedestrian and amenity, including noise impacts to nearby receivers

- Responding to all complaints within 2 hours of complaint being received on the 24 hour phone line
- Closing out complaints within 1 week (where feasible or as agreed with complainant)

Implement the relevant EPOs provided in Table 17.5 of the EIS

 The above targets will be measured during project audits as outlined in Section 8 of this SEMP.

3 Environmental requirements

This Plan has been produced to outline GRCLR's commitment to carrying out the establishment and operation of ancillary facilities for the Project in accordance with the requirements of CoA A2 of the Infrastructure Approval. This chapter describes legislative, regulatory and guidance framework that applies to ancillary facilities.

3.1 Relevant legislation and guidelines

The following legislation, guidelines and standards are relevant to this Plan.

3.1.1 Legislation

Legislation relevant to the management of ancillary facilities includes:

- Biodiversity Conservation Act 2016
- Contaminated Land Management Act 1997
- Environmentally Hazardous Chemicals Act, 1985
- Environmental Planning and Assessment Act 1979 (EP&A Act)
- Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)
- Heritage Act 1977
- National Greenhouse and Energy Report Act 2007
- National Parks and Wildlife Act 1974
- Pesticides Act 1999
- Protection of the Environment Operations Act 1997 (PoEO Act)
- Protection of the Environment Operations (General) Regulation 2009
- Protection of the Environment Operations (Clean Air) Regulation, 2002
- Work Health and Safety Act 2011

3.1.2 Guidelines and standards

Guidelines and standards relevant to ancillary facility management include the following publications:

- Action for Air 2009 (NSW DEC)
- Air Quality Monitoring Criteria for Deposited Dust (DEC Guideline)
- Approved Methods for the Modelling and Assessment of Air Pollutants in New South Wales (DEC 2005)
- Approved Methods for the Sampling and Analysis of Air Pollutants in New South Wales (DEC 2007)
- AS 3580.1.1:2007 Methods for Sampling and Analysis of Ambient Air Guide to Siting Air Quality Monitoring Equipment.
- AS 3580.10.1-2003 Methods of Sampling Analysis of Ambient Air
- Assessing Vibration: A Technical Guideline (DEC 2006)

- British Standard 7385: Part 2 "Evaluation and measurement of vibration in buildings"
- German DIN 4150: Part 3 1999 Effects of Vibration on Structure (DIN 1999)
- Interim Construction Noise Guideline (ICNG) (DECC 2009)
- Managing Urban Stormwater: Soils and Construction (4th Edition) Volume 1 (Landcom 2004) (the "Blue Book")
- Managing Urban Stormwater: Soils and Construction. Volume 2D: Main Road, DECC (2008)
- National Environment Protection Council's (NEPC) NEPM for Ambient Air Quality Guidelines
- NSW Industrial Noise Policy (INP) (EPA 2000)
- NSW Road Noise Policy (RNP) (DECCW 2011)
- EPA's Waste Classification Guidelines (2016)
- Policy and Guidelines for Fish Habitat Conservation and Management (2013 update), DPI Fisheries
- Transport for NSW's Air Quality Management Guidelines (9TP-SD-107/3.0) (TfNSW 2016)
- Transport for NSW's Chemical Storage and Spill Response Guidelines (DMS-SD-066/6.0) (TfNSW 2019)
- Transport for NSW's Construction Noise and Vibration Strategy (DMS-ST-157/4.1) (TfNSW 2019)
- Transport for NSW's Guide to Environmental Control Map (DMS-SD-015/9.0) (TfNSW 2019).

3.2 Minister's Conditions of Approval

The CoAs relevant to this Plan are listed in Table 3-1. A cross reference is also included to indicate where the condition is addressed in this Plan, and a brief summary of how they are addressed is also included. Also included is the definition of "minor" ancillary works as it is relevant to the SEMP.

Table 3-1: Conditions of Approval relevant to the SEMP

CoA No.	Condition Requirements	Reference	How Addressed
Table 1: Definitions	Includes all works required to construct the CSSI as described in the EIS/ Submissions Report (incorporating the Preferred Infrastructure Report), including commissioning trials of equipment and temporary use of part of the CSSI; but excluding the following low impact work: (c) establishment of ancillary facilities in approved locations including constructing ancillary facilities access roads and providing utilities to the facility. (d) operation of ancillary facilities if the ER has determined the operational activities will have minimal (k) other activities determined by the ER to have minimal environmental impact which may include construction of minor access roads, temporary relocation of pedestrian and cycle paths and the provision of property access including access and egress to construction ancillary facilities;	Section 4 Appendix A Appendix D Appendix F Appendix G	This SEMP provides at Section 4 details of the process for approving all forms of ancillary facilities, including minor facilities covered under the definition of 'Construction" in the Infrastructure Approval. Appendices A, D, F and Appendix G provide the relevant checklists for the various forms of ancillary facilities. This SEMP is only relevant to the establishment of ancillary facilities and not construction as defined in Table 1 of the Infrastructure Approval.
A1	The CSSI must be carried out in accordance with the terms of this approval and generally in accordance with the description of the CSSI in the Parramatta Light Rail Westmead to Carlingford via Parramatta CBD and Camellia Environmental Impact Statement (dated August 2017) (the EIS) as amended by:	This SEMP	This SEMP has been prepared in accordance with the Infrastructure Approval, EIS, SPIR and all relevant CoAs, REMMMs and EPOs,

CoA No.	Condition Requirements	Reference	How Addressed
	(a) the Parramatta Light Rail Westmead to Carlingford via Parramatta CBD and Camellia Submissions Report (incorporating Preferred Infrastructure Report) (February 2018) (the SPIR);		
	(b) SSI 8285 Administrative modification (November 2018) (MOD 1); and		
	(c) SSI 8285 Correction to Administrative modification (January 2019) (MOD 2).		
A2	The CSSI must be carried out in accordance with all procedures, commitments, preventative actions, performance criteria and mitigation measures set out in the EIS as amended by the	This SEMP	This SEMP provides detail on how the Project will be carried out in accordance with all procedures, commitments, preventative actions, performance criteria and mitigation
	 a) the Parramatta Light Rail Westmead to Carlingford via Parramatta CBD and Camellia Submissions Report (incorporating Preferred Infrastructure Report) (February 2018) (the SPIR) 		measures set out in the EIS as amended by the SPIR. The CoAs, REMMMs and EPOs relevant to the establishmer and operation of the ancillary facilities are listed in Tables 3-1 3-2 and 3-3, respectively.
	b) SSI 8285 Administrative modification (November 2018) (MOD 1)		
	c) SSI 8285 Correction to Administrative modification (January 2019) (MOD 2)		
	unless otherwise specified in, or required under, this approval.		
A5	Where the terms of this approval require a document or monitoring program to be prepared or a review to be undertaken in consultation with identified parties, evidence of the consultation	Section 6	The terms of this approval require the SEMP to be prepared in consultation with the relevant council(s) and relevant government authorities.
	undertaken must be submitted to the Secretary with the document or monitoring program or review. The evidence must include:		GRCLR issued the SEMP to the following council(s) and government authorities for consultation:
	(a) documentation of the engagement with the party(ies) identified in the relevant condition of approval before submitting the document for approval;		Environmental Protection Authority (EPA) City of Parramatta Council (CoPC)

CoA No.	Condition Requirements	Reference	How Addressed
	 (b) log of the points of engagement or attempted engagement with the identified party(ies) and a summary of the issues raised by the identified party(ies); (c) documentation of any follow-up with the identified party(ies), where feedback has not been provided, to confirm the identified party(ies) has none or has failed to provide feedback after repeated requests; (d) outline of the issues raised by the identified party(ies) and how they have been addressed, including evidence the party(ies) is satisfied the issues have been addressed; and (e) where there are outstanding issues raised by the identified party(ies) that have not been adopted, the reasons why they have not been/could not be adopted must be provided, including evidence of consultation with the relevant party(ies). 		 Roads and Maritime Services (RMS) Emergency Services Sydney Water. A summary of the outcomes of the consultation is presented in Section 6 of this Plan with detailed consultation logs and comments registers presented in a stand-alone A5 Consultation Report to be lodged with DPIE together with this SEMP.
C18	Before establishment of any construction ancillary facility as identified in the EIS and SPIR (and excluding minor construction ancillary facilities), the Proponent must prepare a Site Establishment Management Plan which outlines the environmental management practices and procedures to be implemented for the establishment of the construction ancillary facilities. The Site Establishment Management Plan must be prepared in consultation with the relevant council(s) and relevant government authorities. The Plan must be submitted to the Secretary for approval one (1) month before establishment of any construction ancillary facilities. The Site Establishment Management Plan must detail the management of the construction ancillary facilities and include:	This SEMP Sections 4 and 7 Appendix H	This SEMP covers the following proposed facilities: • 6 Grand Avenue, Camellia • 8 Colquhoun Street, Rosehill. None of the facilities were identified by the EIS/SPIR. A consistency assessment was prepared and approved by TfNSW, a summary of which in accordance with Section 6.12 of the EIS, a summary of which is provided at Appendix H. Environmental management practices and procedures by proposed site are summarised in Section 7. This SEMP is being submitted for approval one month prior to establishment of the construction ancillary facilities. Consultation with CoPC and RMS (now TfNSW) has been undertaken and summarised in Section 6 of this SEMP, with full details provided in a stand-alone consultation report

CoA No.	Condition Requirements	Reference	How Addressed
			submitted to DPIE together with this Plan. Both agencies have indicated they are satisfied the issues they raised have been addressed.
C18 (a)	a description of activities to be undertaken during establishment of the construction ancillary facility (including scheduling and duration of works to be undertaken at the site)	Section 4 Sections 5.2, 5.3 and 5.4 Appendix E Appendix G	Section 4 describes the construction ancillary facilities and activities that would occur there, with additional detail provided in Appendices E and G. The SOM contract construction commencement is dependent on the completion of the remediation works at the SaMF site (6 Grand Avenue) by the remediation contractor. Therefore, the commencement date is unknown at this time.
C18 (b)	figures illustrating the proposed operational site layout(s)	Section 5 Appendix A	Figures illustrating the site layouts are provided in Section 5 and Appendix A.
C18 (c)	a program for ongoing analysis of the key environmental risks arising from the site establishment activities described in subsection (a) of this condition, including an initial risk assessment undertaken before the commencement of site establishment works;	Section 5 Appendix B Appendix E Appendix G	Sections 5 reviews the potential impacts associated with the ancillary facilities. An initial risk assessment has been undertaken and is included in Appendix B. Facility specific impacts are provided in Appendices E and G.

CoA No.	Condition Requirements	Reference	How Addressed
C18 (d)	details of how the site establishment activities described in subsection (a) of this condition will be carried out to: i) meet the performance outcomes stated in the documents listed in the documents identified Condition A1, ii) to address traffic, pedestrian access and amenity around each site, and iii) manage the risks identified in the risk analysis undertaken in subsection (c) of this condition; and	Appendix E Appendix G Appendix B Section 3.4	Environmental control measures and monitoring strategies described in the facility checklists (Appendices E and G) will ensure the impacts of the facilities meet the performance outcomes, address traffic, pedestrian access and amenity, and manage the risks identified in Appendix B.
C18 (e)	a program for monitoring the performance outcomes, including a program for construction noise monitoring consistent with the requirements of Conditions C9 and C11. Nothing in this condition prevents the Proponent from preparing individual Site Establishment Management Plans for each construction ancillary facility.	Section 8.3	A monitoring and inspection program for all facilities is outlined in Section 8.3. Noise monitoring will be undertaken in accordance with the recommendations in the CNVIS' prepared for the sites (Appendix E and G).
C19	Boundary fencing that incorporates screening must be erected around all construction ancillary facilities that are adjacent to sensitive receivers for the duration of site establishment and construction of the CSSI unless otherwise agreed with Relevant Council(s), affected residents, business operators and/or landowners and in accordance with Condition B2(b).	Section 7 Appendix E Appendix G ECM – Appendix A	Environmental control measure SEM2 requires boundary fencing to be established around compound areas, prior to establishment and for the duration of construction unless otherwise agreed with Council, residents or business operators during consultation. Facility checklists (Appendices E and G) assign the requirement to all facilities. Note: 6 Grand Avenue, Camellia fencing has already been established by the Remediation

CoA No.	Condition Requirements	Reference	How Addressed
C20	Boundary screening required under Condition C19 of this approval must reduce visual, noise and air quality impacts on adjacent sensitive receivers	Section 7 Appendix E Appendix G ECM – Appendix A	Environmental control measure SEM2 requires boundary fencing to be established around compound areas, prior to establishment and for the duration of construction unless otherwise agreed with Council, residents or business operators during consultation. Facility checklists (Appendices E and G) assign the requirement to all facilities. Note fencing has already been established by the Remediation Contractor at 6 Grand Avenue.
C21	All construction spoil haulage vehicles and construction plant must be clearly marked as being for the CSSI in such a manner to enable immediate identification within at least 50 metres of the vehicles and plant.	Section 7	SEM21 demonstrates compliance with this CoA.
E23	Notwithstanding Condition E21, works may be undertaken in the Camellia and Rosehill precincts (east of James Ruse Drive) and the Carlingford precinct (from Parramatta River to Victoria Road) 24 hours a day, seven days a week provided that sensitive receivers are not affected by noise levels of greater than 5 dBA above the rating background level at any residence in accordance with the Interim Construction Noise Guideline (DECC, 2009), between 10.00pm and 7.00am.	Appendix E Appendix G	The facility-specific checklists (Appendices E and G) have reviewed the relevance of the condition for each facility and assigned the measures accordingly.
E42	Construction Noise and Vibration Impact Statements must be prepared and implemented for each construction site before construction noise and vibration impacts commence and include specific mitigation measures identified through consultation with affected sensitive receivers. Each Construction Noise and Vibration Impact Statement will supplement the Noise and Vibration Management Sub-Plan and must specifically address	Appendix E Appendix G	The facility-specific checklists (Appendices E and G) have reviewed the relevance of the condition for each facility and assigned the measures accordingly. CNVIS will be prepared for the sites which will detail required mitigation measures to be implemented at each site if required. An Acoustics Advisor (AA) would endorse the Construction

CoA No.	Condition Requirements	Document Reference	How Addressed
	each of the major construction sites and must include but not be limited to:		Noise and Vibration Investigation Study (CNVIS) prior to construction noise and vibration impacts commencing.
	(a) a description of the proposed activities;		
	(b) predicted noise and vibration levels based on background noise levels;		
	(c) examination of alternative methods of construction that would potentially reduce noise and vibration if the potential noise and vibration exceeds the relevant criteria;		
	(d) description and commitment to work practices which limit noise and vibration;		
	(e) description of specific noise and vibration mitigation treatments and time restrictions, including respite periods, duration, and frequency;		
	(f) justification for any activities to be undertaken outside the specified construction hours defined in Conditions E21 and E22;		
	(g) internal noise audit systems including recording of daily hours of construction, progressive impact assessments as work proceeds, conducting informal checks by the AA, providing active and communication links to Council and surrounding residents and sensitive receivers;		
	(h) assessment of potential noise from the proposed construction methods including noise from construction vehicles and noise impacts from required traffic diversions;		
	(i) community consultation and notification;		
	(j) all reasonable and feasible measures including adopting the least noisy available construction methods, systems and equipment;		

CoA No.	Condition Requirements	Reference	How Addressed
	(k) additional noise and vibration mitigation measures as negotiated with affected residents and other sensitive receivers.		
	Note: Existing noise levels, pre-construction noise levels, or the like for the purposes of identifying rating background noise levels, noise management levels and construction noise impacts are noise levels that do not include any other construction related noise.		
E82	Nothing in this approval permits advertising on any element of the CSSI.	Section 7	SEM2 and 52 demonstrate compliance with this CoA.
E83	The Proponent must design and construct the CSSI in a manner that minimises opportunities for graffiti.	Section 7	SEM2 demonstrates compliance with this CoA.
E86	The CSSI must be constructed in a manner that minimises visual impacts resulting from construction sites, including protecting and retaining existing vegetation around the perimeter of compound sites providing temporary landscaping and screening where appropriate to soften views of the construction sites and minimising light spill to adjacent residential areas	Section 7 Appendix E Appendix G ECM – Appendix	Environmental control measure SEM2 requires boundary fencing to be established around compound areas, prior to establishment and for the duration of construction unless otherwise agreed with Council, residents or business operators during consultation.
		A CEMP	Any remnant screening vegetation will be retained at the ancillary facilities (SEM2) where it has not already been removed by a previous contractor.
			Facility checklists (Appendices D and F) assign the requirement to all facilities.
			Toolbox talks and training will include details of ECMs and be tailored to specific environmental issues relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.

CoA No.	Condition Requirements	Reference	How Addressed
E97	All lighting to be implemented as part of the CSSI must have regard to the location of nearby residential dwellings. Lighting impacts must be minimised to the extent possible including the use of shields to reduce light spill and annoyance to adjacent residences.	Section 7 Appendix E Appendix G CEMP	SEM32 demonstrates compliance with this CoA. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. Toolbox talks and training will include details of ECMs and be tailored to specific environmental issues relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
E98	The Proponent must ensure that all external lighting associated with the operation of the CSSI (excluding light rail vehicles) is mounted, screened and directed in such a manner so as not to create nuisance to residences. The lighting must be the minimum level of illumination necessary and shall comply with AS 4282:1997 – Control of the Obtrusive Effects of Outdoor Lighting and relevant Australian Standards in the series AS/NZ 1158 – Lighting for Roads and Public Spaces.	Section 7 Appendix E Appendix G CEMP	SEM32 demonstrates compliance with this CoA. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. Toolbox talks and training will include details of ECMs and be tailored to specific environmental issues relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
E111	Before undertaking any works and during maintenance or construction activities, erosion and sediment controls must be implemented and maintained to prevent water pollution consistent with LandCom's Managing Urban Stormwater series (The Blue Book).	Section 7 Appendix E Appendix G	SEM13 demonstrates compliance with this CoA The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This CoA is not applicable to 8 Colquhoun Street.
E119	Before commencement of any activities that would result in the disturbance of land and/or soil in Areas of Environmental Interest (AEI) identified as having a high risk of contamination, or identified as medium risk subject to further desktop assessment as		This CoA is not triggered for Package 5 scope of works at 6 Grand Avenue. 8 Colquhoun Street is not identified as an AEI in the EIS.

CoA No.	Condition Requirements	Reference	How Addressed
	specified in the documents listed in Condition A1, a Site Contamination Report must be prepared by a suitably qualified person(s) in accordance with the requirements of the Contaminated Land Management Act 1997 and associated guidelines. The Site Contamination Report must outline the potential contamination risks from the AEIs to human health and receiving waterways and detail, where relevant, whether the land is suitable (for the intended land use) or can be made suitable through remediation. For AEIs where there is insufficient information and data available to draw such conclusions, the Site Contamination Report must also detail the outcomes of Phase 2 site contamination investigations within those AEIs.		
E120	For those AEIs where a Site Contamination Report is to be prepared in accordance with Condition E119, where the investigations identify the site is suitable for the intended operations and there is no need for a specific remediation strategy, measures to identify, handle and manage potential contaminated soils, materials and groundwater must be identified in the Site Contamination Report and incorporated into the CEMP or relevant sub-plan.		This CoA is not triggered for Package 5 scope of works at 6 Grand Avenue. 8 Colquhoun Street is not identified as an AEI in the EIS.
E121	For those AEIs where a Site Contamination Report concludes the site can be made suitable for its intended land use subject to remediation, the Site Contamination Report must include a Remediation Action Plan to address disturbed areas, and how the environmental and human health risks will be managed during the disturbance, remediation and/or removal of contaminated soil or groundwater.		This CoA is not triggered for Package 5 scope of works at 6 Grand Avenue. 8 Colquhoun Street is not identified as an AEI in the EIS.
E122	For those AEIs where remediation is required, the Site Contamination Report and Remediation Action Plan must be accompanied by a Site Audit Statement(s), prepared by a NSW		This CoA is not triggered for Package 5 scope of works at 6 Grand Avenue.

CoA No.	Condition Requirements	Reference	How Addressed
	EPA Accredited Site Auditor under the Contaminated Land Management Act 1997, verifying the disturbed area has been or can be remediated to a standard consistent with the intended land use. Where land is remediated, a final Site Audit Statement(s) must be prepared by an accredited Site Auditor, certifying the contaminated and disturbed areas have been remediated to a standard consistent with the intended land use. Note: Terms used in Condition E121 and E122 have the same		8 Colquhoun Street is not identified as an AEI in the EIS.
	meaning as in the Contaminated Land Management Act 1997.		
E123	For those AEIs where remediation is required, the land must not be used for the purpose approved under the terms of this approval until a Site Audit Statement determines the land is suitable for that purpose and any conditions on the Site Audit Statement have been complied with.		Compliance with this CoA will be demonstrated for the Package 5 scope of works at 6 Grand Avenue prior to the commencement of operations. 8 Colquhoun Street is not identified as an AEI in the EIS.
E124	A copy of the final Site Audit Statement must be submitted to the Secretary and relevant Council no later than one month before the commencement of CSSI operations.		Where a SAS is prepared for an AEI, the Final SAS (as required by this CoA) will be issued to DPIE one month prior to commencement of operations.

3.3 Revised Environmental Mitigation and Management Measures

Relevant REMMMs are listed in Table 3-2. This includes reference to required outcomes, the timing of when the commitment applies, relevant documents or sections of the environmental assessment influencing the outcome and implementation.

Table 3-2: Revised Environmental Mitigation and Management Measures relevant to this SEMP

Ref#	Commitment	Timing	SEMP Reference	How Addressed
GEN - 2	A construction compounds Plan would be prepared for the project as part of the overall CEMP. This sub-Plan would set out details for each of the approved construction compounds, including stockpile areas, laydown areas and other ancillary activities required to construct the project.	Pre-establishment	This SEMP. Section 5 ECM - Appendix A	This SEMP was prepared to comply with CoA C18, which relates to and takes precedence over this REMMM (CoA A2 and A3). The SEMP is a standalone document and is not part of or a sub-plan to the CEMP.
				Details on each of the ancillary facilities are provided in Section 5.
				Environmental control maps showing each facility layout are provided in Appendix A.
GEN - 2	Minimise the impact of construction compounds on surrounding land uses and sensitive receivers.	Pre-establishment	Section 7.	Mitigation measures provided in Section 7 are designed to minimise the impact of
			Appendix A Appendix E	the facilities on the environment. The relevance of the measures to each facility
			Appendix G	is shown in the checklists provided in Appendices E and G.
GEN - 2	Locate construction compounds away from sensitive land uses and receivers, wherever practical and feasible, or configure internal compound layouts in a manner that considers noise and light sensitive	Establishment/ construction / decommissioning	Section 7	SEM3/32/33-45 define measures to
			Appendix A	comply with this REMMM. The facility- specific checklists (Appendices E and G)
			Appendix E	have reviewed the relevance of the
	receivers (e.g. use of buildings to shield noisy activities, minimising the requirement for reversing		Appendix G	

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	vehicles, or locating noise intensive activities to maximise the distance to noise sensitive receivers).		ECM – Appendix A	measures for each facility and assigned the measures accordingly.
GEN - 2	Manage stockpile areas to minimise potential pollution of watercourses, groundwater and local air quality.	Construction	Section 7 Appendix A Appendix E Appendix G	SEM4/17/18/26/28 are designed to comply with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly.
GEN - 2	Minimise the clearing of vegetation (e.g. street trees and trees within public open spaces) to the minimum amount necessary to construct the project, particularly where construction compounds are proposed in public open spaces/parkland areas.	Establishment	Section 7	SEM5/6/7 demonstrate compliance with this this REMMM. It only applies to 8 Colquhoun Street where road base may be placed over the lawn in the centre of the site. It is considered the lawn is of limited biodiversity value. All trees would be retained.
GEN - 2	Locate construction compounds away from (or able to be managed in such a way so as to not impact on) heritage items and high retention value trees.	Pre-establishment	Appendix B	None of the facilities would interact with known heritage or involve the removal of trees.
GEN - 2	Flood response measures for compounds that are located on land affected by the 20-year ARI flood level (e.g. bridge support construction compounds).	Construction	Section 5	None of the facilities are located on land affected by the 20-year average recurrence interval (ARI) flood.
GEN - 2	Situate construction compounds and ancillary facilities on relatively level ground and avoid excavation in construction compounds where risk of heritage impacts or disturbance of contaminated material.	Establishment	Section 5	The site at 6 Grand Avenue is an identified contaminated site, and requires remediation (see response to E119 to E124 above).

Ref#	Commitment	Timing	SEMP Reference	How Addressed
GEN - 2	Minimise the visual impact of construction compounds and ancillary facilities through either siting such facilities away from sensitive receivers (where practical and feasible) and/or providing screening.	Establishment	Section 7 Appendix E Appendix G Appendix A	None of the facilities would interact with known heritage or contamination. No excavation would be required for any of the facilities. All are located on level ground. SEM2 demonstrates compliance with this this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measure accordingly.
GEN - 2	Reinstatement strategies for construction compounds. As a minimum, this would include: - At the completion of construction, all plant, temporary buildings or vehicles would be removed. - All land, including roadways, footpaths or other land having been occupied temporarily would be returned to their pre-existing condition or better. - Reinstatement of community spaces, infrastructure and services would occur as soon as possible after completion of construction. - Environmental management measures for construction compounds would be developed as part of the overall CEMP, with the construction compounds sub -Plan identifying where such measures are documented within the CEMP.	Decommissioning	Section 7 Appendix E Appendix G	SEM10 demonstrates compliance with this this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure to all facilities. Reinstatement of the sites at the cessation of construction will be undertaken under the provisions of the CEMP and sub-plans, and not this SEMP.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
BI-3	A requirement to prepare Environmental Control Maps in accordance with Transport for NSW's Guide to Environmental Control Map. The maps would delineate ecologically sensitive areas (such as habitat areas or locations of threatened species, populations or ecological communities), clearing extents, vegetation to be retained, and any other no-go areas.	Pre-establishment	Appendix A	ECMs have been prepared and are provided in Appendix A.
BI-3	Procedures for the clearing of vegetation and the relocation of flora and fauna. Where possible, the removal of native vegetation would be minimised as far as practicable. Measures to minimise the removal of native vegetation would include: Use of high visibility fencing (such as barrier mesh) to delineate vegetation to be retained or limits of clearing.	Establishment	Section 7 Appendix E Appendix G	SEM5/6/7 demonstrate compliance with this this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly. This REMMM is not applicable to 6 Grand Avenue.
BI-3	A trained ecologist would accompany clearing crews to ensure disturbance is minimised and to assist any native animals to relocate to adjacent habitat.	Establishment	Section 7 Appendix E Appendix G	SEM6 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable 6 Grand Avenue
BI-3	Measures to reduce disturbance to sensitive fauna. Rehabilitation requirements, including identification of flora species and sources, and measures for the management and maintenance of rehabilitated areas	Establishment	Section 7 Appendix E Appendix G	SEM5/7 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	(including for example a program of weed removal and monitoring).			relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand
BI-3	Procedure for dealing with unexpected identification	Pre-establishment	Section 7	SEM6 demonstrates compliance with this
	of Endangered Ecological Communities or threatened species during construction.			REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly.
				This REMMM is not applicable to 6 Grand Avenue
BI-3	Auditing and monitoring of the Plan.	Construction	Section 8.4 Section 8.7	Monitoring and auditing are included in Section 8.4 and 8.7, respectively
CM-1	During detailed design, a desktop risk assessment would be carried out for the following Areas of Environmental Interest (AEI) to confirm high or medium risk of contamination:	Pre-establishment	Section 1.5.2 Appendix A2	This REMMM is not triggered for Package 5 scope of works at 6 Grand Avenue. This REMMM is not applicable for 8 Colquhoun Street.
	 435 Church Street, Parramatta (AEI 9). 			Colquilouri Street.
	1A Barrack Lane, Parramatta (AEI 13).			
	 142-154 Macquarie Street, Parramatta (AEI 14). 			
	127 Alfred Street Parramatta (AEI 16).			

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	 Former James Hardie Property at 181 James Ruse Drive, Rosehill and 1 Grand Avenue, Rosehill (AEI 21 and AEI 22). 			
	 6 Grand Avenue, Rosehill (former Akzo Nobel site) (AEI 27). 			
	This would involve a review of available data, collaboration with stakeholders and consideration of the extent of disturbance by the project in the vicinity of the AEI. Based on the results of this assessment:			
	 Mitigation and management measure CM-2 would apply to AEIs classified as high risk 			
	 Mitigation CM-4 would apply to AEIs classified as medium risk. 			
CM-2	Prior to the commencement of construction in the vicinity of these sites, site investigations would be	Pre-establishment		This REMMM is not triggered for Package 5 scope of works at 6 Grand Avenue.
	 carried out at the following high risk AEI: Former gas works at Queens Wharf Reserve (AEI 15) 			This REMMM is not applicable for 8 Colquhoun Street.
	13A Grand Avenue, Camellia (AEI 21).			
	The results from the site investigations would be assessed against criteria contained within the National Environment Protection (Assessment of Site Contamination) Measure 1999 (2013) to determine any need for remediation.			
	Remediation works would be performed in accordance with the hierarchy of preferred strategies in the Guidelines for the NSW Site Auditor Scheme (DECCW 2006). Where practical, remediation works			

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	would be integrated with excavation and development works performed during construction.			
CM-3	For low and medium risk sites, environmental management measures would be applied as detailed in a Construction Contaminated Land Management Plan (CCLMP), as a subplan to the CEMP. The measures would be tailored to address any specific locations where contamination is identified through the current contaminated land investigations. This includes worker health and safety measures.	Establishment		This REMMM is not triggered for Package 5 scope of works at 6 Grand Avenue. This REMMM is not applicable for 8 Colquhoun Street.
CM-4	Visual inspections and monitoring would be performed during excavation activities at medium risk AEIs to identify potential indicators of contamination. If suspected contamination is encountered, the materials would be subject to sampling and analysis to determine management requirements and suitability for reuse, recycling or remediation.	Establishment		This REMMM is not triggered for Package 5 scope of works at 6 Grand Avenue. This REMMM is not applicable for 8 Colquhoun Street.
CM-5	Construction activities within AEI 23 (Sandown Line, including 27 Grand Avenue, Camellia) would be carried out under asbestos control and removal conditions by an appropriately licensed asbestos contractor.	Construction		This REMMM is not applicable for Package 5 scope of works at 6 Grand Avenue. This REMMM is not applicable for 8 Colquhoun Street.
CM-6	An unexpected finds procedure would be developed and implemented as part of the project CCLMP, outlining a set of potential contamination issues which could be encountered, and detailing the corrective actions to be implemented.	Construction		The GRCLR CLMP (as endorsed by the ER) includes an unexpected finds procedure.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
HY-6	Specific measures would be identified in consultation with relevant government agencies and would be consistent with the principles and practices detailed in Landcom's (2004) Managing Urban Stormwater: Soils and Construction.	Pre-establishment	Section 1.5.2 Section 7 Appendix E Appendix G	SEM13 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 8 Colquhoun Street.
HY-6	Minimise the extent and duration of exposed surfaces (particularly those works that have the greatest potential to disturb soils that are contaminated or have a high erosion and runoff hazard).	Construction	Section 7 Appendix E Appendix G	SEMM23 and 28 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly.
HY-6	Minimise and manage impacts on water quality and downstream receiving environments during instream activities.	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as no instream work will be carried out.
HY-6	Flood response measures for activities located on land affected by the 20-year ARI flood level (e.g. bridge support construction compounds) or works within waterways (such as bridge works).	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as none of the facilities are within the 20-year ARI flood zone.
HY-6	Where possible, reuse excavated materials as fill on other parts of the project in preference to disposing off-site in accordance with EPA Waste Classification Guidelines (2016).	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as significant earthworks will not be carried out.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
HY-6	Areas of potential contamination concern would be identified and works in these areas managed to minimise disturbance.	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as significant earthworks will not be carried out. The establishment of 6 Grand Avenue may require shallow cable trenching. The remediation of the site by others prior to establishment would preclude the presence of contamination.
HY-6	Excavate pre-classified contaminated materials and transfer such materials directly into haulage trucks for off-site disposal at a waste facility licensed to accept the contaminated material.	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as significant earthworks will not be carried out. The establishment of 6 Grand Avenue may require shallow cable trenching. The remediation of the site by others prior to establishment would preclude the presence of contamination.
HY-6	Develop procedures for the assessment, handling and stockpiling of potentially contaminated materials, in accordance with EPA Waste Classification Guidelines (2016).	Construction	Section 7 Appendix E Appendix G	SEM14 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 8 Colquhoun Street.
HY-8	Large areas of disturbance such as compound areas and stockpile sites would, where feasible and reasonable, be located away from any surface runoff flow paths and above the 10% AEP flood levels.	Establishment	Section 5	The facilities are located outside the 1% AEP flood extent, but within the probable maximum flood zone. The facilities would

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				not obstruct overland flow, increasing flood risk elsewhere.
AQ-1	Apply wheel-wash or rumble grid facilities as appropriate to remove loose material and prevent the tracking of spoil debris onto local roads.	Construction	Section 5 ECM - Appendix A	Wheel-wash or rumble grid facilities would be located at the exit of 6 Grand Avenue (SEM19). This REMMM is not applicable to the other facilities.
AQ-1	Clean loose materials and debris from the tailgate of vehicles unloading materials to stockpiles prior to departure from site.	Construction	Section 7 The CEMP	Loose material and debris would be removed from the tailgate of vehicles unloading materials to stockpiles prior to departure from site at 6 Grand Avenue (SEM20).
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
				This REMMM is not applicable to the other facilities.
AQ-1	Conduct routine servicing and maintenance, and	Construction	Section 7	SEM21 requires:
	subsequent inspections to ensure that equipment continues to operate efficiently.		The CEMP	All vehicles and equipment will be maintained and serviced to operate efficiently.
				All on-road trucks would comply with the relevant Australian emission standards.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				Compliance checks for noise emissions from vehicles and equipment would be carried out.
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Ensure that all loads are covered when materials are being hauled to and from site.	Construction	Section 7	All loads will be covered when travelling offsite (SEM22).
			The CEMP	Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Ensure that compound area surfaces are well compacted or sealed to limit the potential for dust generation.	Establishment / construction	Section 7 Section 5	Unsealed ground will be treated with a binder to minimise dust emissions (SEM23)
			The CEMP	6 Grand Avenue will be sealed with binder. The grass area will be cleared and bitumen laid at 8 Colquhoun Street to expand the car park capacity.
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Ensure that structures are inspected by a suitably qualified person to confirm they do not contain any hazardous materials (e.g. asbestos) which could be broken and mobilised during demolition. Where such materials are identified, adhere to the requirements for removal and disposal listed in the Work Health and Safety Act 2011, and Work health and Safety Regulation 2011.	N/A	N/A	This REMMM is not applicable to the ancillary facilities as demolition is not required.
AQ-1	Impose low speeds limits around compound sites to limit the generation of dust from vehicle movements.	Construction	Section 7 The CEMP	Speed limits will be imposed to limit the generation of dust from vehicle movements (SEM24). Speed limits will be posted throughout the site. This measure is only relevant to 6 Grand Avenue. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Install dust monitoring devices to quantify dust levels and determine whether control measures are adequate or whether further actions are required.	Construction	Appendix B Section 7	The initial risk assessment review of all facilities identified dust emissions as a low risk, therefore dust emissions would be monitored visually by facility staff. The

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				occurrence of dust emissions would trigger dust suppression strategies (SEM18). Dust monitoring devices would be installed if dust emissions become a significant issue (SEM25). This measure is only relevant to 6 Grand Avenue.
AQ-1	Installation of perimeter screening around areas where there is a potential to generate emissions to air and around long-term compound and stockpile locations.	Establishment	Section 7 Appendix E Appendix G ECM – Appendix A	SEM2 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly.
AQ-1	Plan activities and avoid adversely windy conditions which may result in the generation of off-site dust impacts.	Construction	Section 7 Section 8.4 Appendix E Appendix G The CEMP	SEM26 demonstrates compliance with this REMMM. Weather will be monitored in accordance with Section 8.4 The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measures accordingly. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				continues throughout construction, in accordance with the CEMP.
AQ-1	Position stockpiling areas as far as possible from surrounding receivers.	Establishment / construction	Section 7 Appendix E Appendix G ECM – Appendix A The CEMP	SEM4 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 8 Colquhoun Street. The ECM for 6 Grand Avenue shows the location of the stockpiles. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are
				used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Regularly water exposed and disturbed areas and stockpiles especially during inclement weather conditions.	Construction	Section 7 Appendix E Appendix G The CEMP	SEMM18/23/26/28 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly.
				This REMMM is not applicable to 8 Colquhoun Street.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Water demolition areas as necessary to minimise the generation of dust.	N/A	Section 5	This REMMM is not applicable to the ancillary facilities as demolition is not required.
AQ-1	Wherever possible and practical, limit the amount of materials stockpiled, extent of disturbed and exposed surfaces. Restoration of cleared areas is to occur as soon as possible.	Construction	Section 7 Appendix E Appendix G The CEMP	SEM18/23/26/28 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly.
				This REMMM is not applicable 8 Colquhoun Street
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Apply odour supressing agents to materials as necessary to minimise related impacts should any	N/A	N/A	This REMMM is not applicable to the ancillary facilities as earthworks will not be carried out.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	contaminated or hazardous materials be uncovered during the works.			
AQ-1	Construction plant and equipment would be well maintained and regularly serviced so that vehicular emissions remain within relevant air quality guidelines	Construction	Section 7 The CEMP	All vehicles and equipment will be maintained and serviced to operate efficiently.
	and standards.			All on-road trucks would comply with the relevant Australian emission standards (SEM21).
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	AQ-1 All vehicles used on site, for transporting materials to or from site, or for any other activities associated with the project, shall be maintained to avoid the emission of excessive air impurities in accordance with Part 5.8 of the <i>Protection of the Environment Operations Act</i> 1997 and the <i>Protection of the Environment Operations (Clean Air) Regulation 2010.</i>	Construction	Section 7 The CEMP	All vehicles and equipment will be maintained and serviced to operate efficiently. All on-road trucks would comply with the
				relevant Australian emission standards (SEM21).
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
AQ-1	All on-road trucks would comply with the relevant Australian emission standards.	Construction	Section 7 The CEMP	All vehicles and equipment will be maintained and serviced to operate efficiently.
				All on-road trucks would comply with the relevant Australian emission standards (SEM21).
				Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	All chemicals and fuels would be stored in sealed containers as per appropriate regulations and guidelines.	Construction	Section 7 Appendix E Appendix G Section 5 ECM – Appendix A The CEMP	SEMM27 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measures accordingly. Hazardous materials will be stored in the laydown area in self-bunded shipping
				containers in 6 Grand Avenue. The location of the laydown area is provided in the ECM in Appendix A. This REMMM is not applicable 8
				Colquhoun Street. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	The on-site storage of fuel would be kept to a minimum.	Construction	Section 5	This REMMM is not applicable to 1 8 Colquhoun Street because the site is being used as a project office and carpark, respectively.
				No fuel will be stored at the 6 Grand Avenue. To keep fuel storage to a minimum, fuel will be supplied to site equipment from a mobile fuel tanker. This tanker may park within the laydown area when it is not required.
AQ-1	Unloading of fuels (diesel or liquefied nitrogen gas (LNG)) would be vented via return hoses that recirculate vapours from delivery to receiver.	N/A	N/A	This REMMM is not applicable to the ancillary facilities as no fuel will be stored onsite.
AQ-1	On dry days, unsurfaced haul roads would be watered to aid dust suppression.	Construction	Section 7 Appendix E Appendix G The CEMP	SEM18/23/26/28 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly. This REMMM is not applicable to 8
				Colquhoun Street. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Stockpiles left for extended periods would be grassed or covered with appropriate material.	Construction	Section 7 Appendix E Appendix G ECM in Appendix A The CEMP	SEM28 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly. Stockpiles will be located in the laydown area of 6 Grand Avenue. The location of the laydown area is provided in the ECM in Appendix A. This REMMM is not applicable to 8 Colquhoun Street. Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness continues throughout construction, in accordance with the CEMP.
AQ-1	Chemical/fuel storage tanks would be fitted with a conservation vent (to prevent air inflow and vapour escape until a pre-set vacuum or pressure develops).	Construction	Section 7 Appendix E Appendix G	SEM27/29 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for

Ref#	Commitment	Timing	SEMP Reference	How Addressed
			Section 5	each facility and assigned the measures accordingly. Hazardous materials will be stored in the laydown area in self-bunded shipping containers in 6 Grand Avenue. This REMMM is not applicable to 8 Colquhoun Street.
HR-5	Potential environmental hazards and risks associated with construction activities would be identified prior to construction.	Pre-establishment	Appendix B Appendix E Appendix G	An initial environmental risk review and environmental checklists have been completed.
HR-5	The storage of hazardous materials, and refuelling/maintenance of construction plant and equipment would be carried out in clearly marked and bunded areas within the construction site that are designed to contain spills and leaks in accordance with Australian Standards and DECCW guidelines.	Construction	Section 7 Appendix E Appendix G Section 5 ECM - Appendix A	SEMM27/29/31 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measures accordingly. No maintenance will occur at any of the facilities during establishment works. Hazardous materials will be stored in the laydown area in self-bunded shipping containers in 6 Grand Avenue. This REMMM is not applicable to 8 Colquhoun Street.
HR-5	Hazardous materials would not be stored below the ten per cent AEP flood level flood level.	Construction	Section 7 Appendix E	SEMM30 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have

Ref#	Commitment	Timing	SEMP Reference	How Addressed
			Appendix G	reviewed the relevance of the measure for each facility and assigned the measures accordingly. This REMMM is not applicable to 8 Colquhoun Street.
HR-5	Chemical spill kits would be readily available and accessible to construction workers. Kits would be kept at site compounds and on specific construction vehicles, and all hazardous materials spills and leaks would be reported to site managers and actions would be immediately taken to remedy spills and leaks.	Construction	Section 7 Appendix E Appendix G	SEMM31 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measures accordingly. This REMMM is not applicable to 8 Colquhoun Street.
HR-5	Employees would be trained in the correct use of spill kits.	Construction	Section 8.2	Training would include the correct use of spill kits.
VL-15	Hoardings including graphics, artwork or project information as identified during detailed design would be installed as early as feasible and reasonable in the construction process. Hoardings would be kept in good condition including the prompt removal of graffiti.	Establishment / construction	Section 7 Appendix E Appendix G	SEM2 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly.
VL-16	Where feasible and reasonable, the elements within worksites and construction compounds would: Be located to minimise visual impact, for example materials and machinery would be stored behind fencing/hoarding.	Establishment / construction	Section 7 Appendix E Appendix G ECM - Appendix A	SEM32 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				relevance of the measure for each facility and assigned the measure accordingly. The layout and features of the ancillary facilities are shown in the ECMs, provided in Appendix A.
VL-16	Include temporary lighting that would be orientated to minimise glare and light spill impact on adjacent receivers.	Establishment / construction	Section 7 Appendix E Appendix G	SEM3/32 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measure accordingly.
VL-16	Retain and protect existing vegetation around the perimeters where feasible and reasonable to act as a visual screen.	Establishment	Section 7 Appendix E Appendix G	SEM2 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. The trees outside the perimeter of 6 Grand Avenue, and those inside 8 Colquhoun Street will be retained.
VL-17	The footprint of the construction compounds in open space areas would be minimised where feasible to reduce visual impacts. This includes the following areas: • Westmead compound	Establishment	Section 7 Appendix E Appendix G Appendix A	This REMM is not relevant to the ancillary facilities as none are located in the mentioned areas. SEM3 commits to consider open space when developing the layout of a facility.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	 Parramatta North compound Parramatta River Bridge (north) Dundas Kissing Point Road Carlingford 			
NV-2	For construction concentrated in a single area, such as at the stops, worksites, substation construction sites, bridge sites and the SaMF site, temporary acoustic fencing/barriers around the site perimeter would be considered where feasible and reasonable to mitigate off-site noise levels.	Pre-establishment	Section 7 Appendix E Appendix G	SEM33/34 demonstrate compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Given the potentially high noise levels at residential receivers, adherence to daytime construction hours would be used for excavation, demolition or rock breaking activities, and for activities concentrated in a single area (i.e. activities that do not move along the alignment, and do not require out-of-hours activities for safety reasons or to minimise disruption to road networks).	N/A	Appendix B	This REMM is not relevant to the ancillary facilities as no residential receivers are located nearby.
NV-2	Where possible, noisy works would be scheduled to minimise impacts to adjacent businesses and commercial properties, such as avoiding undertaking	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM36 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	noisy activities on Eat Street during lunch and dinner periods.			relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Out of hours works would be programmed to minimise the number of consecutive out of hour work periods impacting the same receptors.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM35 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Consultation would be carried out with local schools and other educational facilities prior to noise intensive works to ensure impacts are minimised during examination periods and/or other critical periods in the school calendar (where works are predicted to exceed the relevant construction noise management level for this receiver). Consultation with nearby childcare centres would be carried out to potentially avoid noisy works during rest periods at the centres (where possible).	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM36 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Simultaneous operation of noisy plant in close proximity to sensitive receptors would be avoided (where possible).	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM37 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the

Ref#	Commitment	Timing	SEMP Reference	How Addressed
				relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Equipment which is used intermittently would be shut down when not in use.	Establishment / construction / decommissioning	Section 7	SEM38 demonstrates compliance with this REMMM.
NV-2	Where possible, the offset distance between noisy plant items and nearby noise sensitive receptors would be as great as possible.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM39 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Where possible, equipment with directional noise emissions would be oriented away from sensitive receptors.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM40 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Construction compounds would use 2.4-v metre-high hoarding of solid construction where required to	Establishment	Section 7 Appendix E	SEM34 demonstrates compliance with this REMMM.

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	minimise noise on sensitive receivers, where safe to do so.		Appendix G	The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Structures such as site sheds would be positioned to further shield sensitive and residential receivers from works activities.	Establishment	Section 7 Appendix D Appendix F	SEM3 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Regular compliance checks for noise emissions from all plant and machinery used for the project would be carried out to indicate whether noise emissions from plant items are higher than predicted. This would also identify defective silencing equipment on the items of plant.	Construction	Section 7 Section 8.4	Noise emission monitoring of vehicles and equipment will be carried out (SEM21).
NV-2	Ongoing noise monitoring would be carried out during construction at sensitive receptors during critical periods to identify and assist in managing high risk noise events.	Construction	Section 7 Section 8.4 Appendix E Appendix G	SEM41 demonstrates compliance with this REMMM. The monitoring requirement is included in Section 8.4 The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly.

Ref #	Commitment	Commitment Timing SEMP Reference		How Addressed
				This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Where possible heavy vehicle movements should be limited to daytime hours.	Establishment / construction / decommissioning	Section 7	Where possible heavy vehicle movements would be limited to daytime hours (SEM42).
NV-2	Reversing of equipment should be minimised so as to prevent nuisance caused by reversing alarms, which would be limited to the use of non-tonal reversing alarms.	Establishment / construction / decommissioning	Section 7 ECM in Appendix A	Reversing of equipment would be minimised so as to prevent nuisance caused by reversing alarms, which would be limited to the use of non-tonal reversing alarms (SEM43).
				This measure is most relevant for 6 Grand Avenue. The road system is designed to minimise the amount of reversing required. The ECM shows the vehicle movement routes through the facility.
NV-2	Loading and unloading should be carried out away from sensitive receptors, where practicable.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM44 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street.
NV-2	Work should be scheduled to provide respite periods from the noisiest activities, and impacted residents should be communicated with to clearly explain the duration and noise levels for the works.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM45 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the

Ref#	Commitment	Timing	SEMP Reference	How Addressed
TR-9	As far as practical, the construction compounds would	Establishment	Section 7	relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 6 Grand Avenue or 8 Colquhoun Street. SEM3/5/7 demonstrate compliance with
	be configured so as to not directly impact on trees that would not already be directly impacted by the project. Where trees which can be retained are located within construction boundaries, exclusion fencing would be erected to protect these trees from construction activities. Similarly, for road network modifications away from the main alignment, these works would be carried out, as far as practical, so as to minimise any further impact on trees as a result of the project.		Appendix E Appendix G Section 4.2	this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly. This REMMM is not applicable to 6 Grand Avenue. The expansion of parking capacity at 8 Colquhoun Street will avoid impacting the trees present within the site.
TT-25	To maintain safe motorist, pedestrian and cyclist access where construction works would occur, mitigation and management measures would be detailed in the Construction Traffic Management Plan and implemented during construction. This would include:	Construction	Section 7 The CEMP	SEM24 and Section 8.4 demonstrate compliance with the use of speed awareness signs. SEM49 and SEM50 undertakes appropriate controls for movement of vehicles in residential areas
	 Use of speed awareness signs in conjunction with variable message signs near construction sites to provide alerts to drivers Appropriate controls where vehicles are required to cross footpaths to access construction areas, 			Toolbox talks and training will include details of ECMs and be tailored to management of air quality relevant to upcoming works. The toolbox talks are used to ensure environmental awareness

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	including manual supervision, physical barriers or temporary traffic signals.			continues throughout construction, in accordance with the CEMP.
	Consideration of shared experience educational events that allow pedestrians, cyclists or motorists to sit in trucks and understand the visibility restrictions of truck drivers, and for truck drivers to understand the visibility from a bicycle.			A Traffic, Transport and Access Management Plan will be prepared to support the CEMP and will be used to inform the SEMP.
	 Consideration of pedestrian access needs for elderly people, children and people with disability, where reasonably practicable. 			
	 Specific construction driver training to understand route constraints, expectations, safety issues and to limit the use of compression braking. 			
	 Safety devices on construction vehicles that warn drivers of the presence of a vulnerable road user located in the vehicles' blind spots and warn the vulnerable road user that a vehicle is about to turn 			
	Site specific construction traffic management plans and site specific traffic control plans would be prepared and implemented, including mitigation and management responses associated with the temporary closures (including weekend closures) of:			
	Church Street and Pennant Hills Road.			
	Church Street and Barney Street.			
	Church Street and Board Street.			
	Church Street and Victoria Road.			
	Smith Street and Macquarie Street.			

Ref#	Commitment	Timing	SEMP Reference	How Addressed
	 Church Street and George Street. James Ruse Drive. Grand Avenue. These site-specific traffic management plans would detail: Site access and associated route and turning movements. Potential activities that could result in the disruption to traffic and transport networks, including pedestrian, cyclist and public transport networks and during special events. The timing to limit disruptions to the road and transport networks. The maintenance of access and safety of transport networks, parking and property. Details responses to the management of an event that directly involves or impacts on traffic and transport networks. 			
WM-2	Construction waste would be managed through the waste hierarchy established under the Waste Avoidance and Resource Recovery Act 2001 management hierarchy	Pre-establishment	Section 7 Appendix E Appendix G	SEM 14 demonstrates compliance with this REMMM as far as is relevant for the scope of this Plan. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly.

Ref#	Commitment		SEMP Reference	How Addressed	
				This REMMM is not applicable to 8 Colquhoun Street.	
WM-2	Classification of waste during construction in accordance with the current guidelines	Construction	Section 7 Appendix E Appendix G	SEM14 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 8 Colquhoun Street.	
WM-2	Segregation of waste into stockpiles of spoil, concrete, steel, timber, paper and carboard and vegetation to make it easier to recycle components and prevent cross contamination.	Establishment / construction / decommissioning	Section 5	Segregation of waste will be carried out by a licenced waste contractor.	
PR-5	The design and placement of construction hoardings would consider opportunities to minimise privacy impacts on adjacent residents or other adjacent land uses sensitive to privacy concerns.	Establishment	Section 7 Appendix E¶ Appendix G ECM in Appendix A	SEM2 demonstrates compliance with this REMMM. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. Both 6 Grand Avenue and 8 Colquhoun Street will have boundary hoarding installed. The ECM in Appendix A shows the placement of the hoarding.	

3.4 Environmental Performance Outcomes

Relevant EPOs are listed in Table 3-3 below. This includes reference to required outcomes, the timing of when the commitment applies relevant documents or sections of the environmental assessment influencing the outcome and implementation.

Table 3-3: Environmental Performance Outcomes relevant to this SEMP

ID Ref#	Environmental Performance Outcome	Timing	SEMP reference	How Addressed
EPO- TT-1	The project would implement measures to minimise impacts on the road network, including staging.	Establishment / construction / decommissioning	Section 7	The scheduling of road deliveries would be managed to make sure that road congestion is minimised (SEM48). This measure is not relevant to 8 Colquhoun Street.
EPO- TT-2	Pedestrian and cyclist safety would be maintained.	Establishment / construction / decommissioning	Section 7 ECM/TCP in Appendix A	Gate keepers will meet arriving deliveries and make sure pedestrians and cyclists are kept clear of turning vehicles (SEM49). A TCP has been developed for 6 Grand Avenue, which is provided in Appendix A. This measure is not relevant to 8 Colquhoun Street.
EPO- TT-3	Effective coordination would be carried out to minimise cumulative network impacts.	Establishment / construction / decommissioning	Section 7	The scheduling of road deliveries would be managed to make sure that road congestion is minimised (SEM48). This measure is not relevant to 8 Colquhoun Street.
EPO- TT-4	Access to property would be maintained.	Establishment / construction / decommissioning	Section 7 Appendix B Appendix E	Vehicles would be prevented from waiting in public areas where they block access to adjacent properties (SEM50).

ID Ref#	Environmental Performance Outcome	Timing	SEMP reference	How Addressed
			Appendix G	This measure is not relevant to 6 Grand Avenue and 8 Colquhoun Street.
EPO- NV-1	Noise levels would be minimised with the aim of achieving the noise management levels where feasible and reasonable.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM 33-45 are designed to minimise noise levels. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measures for each facility and assigned the measures accordingly.
EPO- NV-2	The project would avoid any damage to buildings or heritage items from vibrations.	Establishment / construction / decommissioning	Section 7 Appendix E Appendix G	SEM33 demonstrates compliance with this EPO. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. The measure is not relevant to 6 Grand Avenue or 8 Colquhoun Street.
EPO- HE-2	The project would be sympathetic to heritage items and, where feasible and reasonable, avoid and minimise impacts to non-Aboriginal heritage items and archaeology.	Establishment	Appendix E Appendix G	The location of the proposed facilities would preclude an impact to heritage (Section 4.1).
EPO- AB-1	The project would be sympathetic to heritage items and, where feasible and reasonable, avoid and minimise impacts to Aboriginal heritage items and archaeology.	Establishment	Appendix E Appendix G	The location of the proposed facilities would preclude an impact to heritage (Section 4.1).

ID Ref#	Environmental Performance Outcome	Timing	SEMP reference	How Addressed
EPO-F-	No aspect of the project would materially adversely affect existing flood behaviour in the vicinity of the project.	Establishment	Section 5	The facilities are located outside the 1% AEP flood extent, but within the probable maximum flood zone. The facilities would not obstruct overland flow, increasing flood risk elsewhere.
EPO- SG-1	Erosion and sediment controls during construction would be implemented in accordance with Managing Urban Stormwater: Soils and Construction Volume 1 (Landcom, 2004) and Managing Urban Stormwater: Soils and Construction Volume 2 (Department of Environment and Climate Change, 2008a).	Establishment	Section 7 Appendix E Appendix G ECM in Appendix A	SEM13 demonstrates compliance with this EPO. The facility-specific checklists (Appendices E and G) have reviewed the relevance of the measure for each facility and assigned the measure accordingly. This REMMM is not applicable to 8 Colquhoun Street. The location of the erosion sediment controls is shown in the ECM, provided in Appendix A.
EPO- SU-1	The project would be carried out in accordance with the Parramatta Light Rail Sustainability Strategy.	Establishment / construction / decommissioning	Section 7	The project would be carried out in accordance with the Parramatta Light Rail Sustainability Strategy (SEM46).
EPO- SU-2	The project would comply with the relevant requirements of the NSW Government Resource Efficiency Policy.	Establishment / construction / decommissioning	Section 7	The project would comply with the relevant requirements of the NSW Government Resource Efficiency Policy (SEM47).

4 Ancillary Facilities Approval Process

An overview of the approvals proposed for all ancillary facilities included in the EIS and potential new/changed ancillary facilities for the Project is set out in Table 4-1. These are based on the Infrastructure Approval outlined in Section 1.2 of this Plan.

Table 4-1: Ancillary facilities approval opportunities

	Approved Facility included in EIS / SPIR	CoA C18^ Compliant	EIS Section 6.12 Compliant	Additional Actions	Actions for this SEMP
Approved Facilities	~	√	N/A	N/A	Include in SEMP for Secretary's Approval
				Prepare New/Amended Ancillary Facilities Application Form and Minor Ancillary Facilities Checklist.	
Proposed Facility	×	N/A	√	Consistency Assessment for Environment Manager's review and TfNSW Approval.	Include in SEMP
				Prepare Construction Ancillary Facilities Checklist (Appendices C and G).	
Proposed Minor* Facility	×	N/A	✓	Prepare New/Amended Ancillary Facilities Application Form and Minor Ancillary Facilities Checklist for Environment Manager's review.	Refer to the ER's approval of the minor facility as being minor

[^] Refer to CoA C18 in Section 1.4 of this Plan for criteria

The possible approvals pathways for proposed ancillary facilities are summarised in Figure 4-1. None of the ancillary facilities currently proposed for the Project fall under ancillary facilities assessed in the EIS or SPIR. The process for these compounds is shown in darker grey. A detailed flow chart of approvals for new or amended facilities is provided at Appendix C.

^{*} Minor as defined by Definition of Construction – Part (K) and Minor Ancillary Facilities Checklist (Appendix C)

^{*}Minor facility must be endorsed and approved by the ER and AA in accordance with A23 and A29

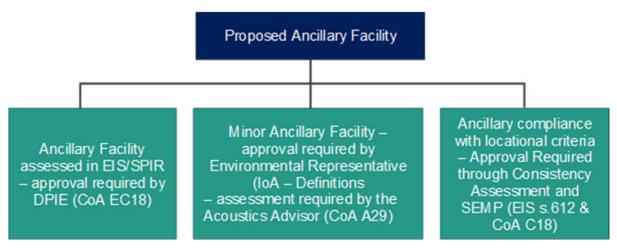

Figure 4-1: Ancillary facility approvals pathway

The EIS and SPIR identify key construction ancillary facilities, for which a SEMP is required to be prepared. CoA C18 provides that a SEMP is required for ancillary sites that are not considered "minor" under the definition of "non-construction works" under the Infrastructure Approval. Minor construction ancillary facilities can be approved by the ER.

C18 - Before establishment of any construction ancillary facility as identified in the EIS and SPIR (and excluding minor construction ancillary facilities), the Proponent must prepare a Site Establishment Management Plan which outlines the environmental management practices and procedures to be implemented for the establishment of the construction ancillary facilities.

The Site Establishment Management Plan must be prepared in consultation with the relevant council(s) and relevant government authorities. The Plan must be submitted to the Secretary for approval one (1) month before establishment of any construction ancillary facilities. The Site Establishment Management Plan must detail the management of the construction ancillary facilities and include:

- (a) a description of activities to be undertaken during establishment of the construction ancillary facility (including scheduling and duration of works to be undertaken at the site);
- (b) figures illustrating the proposed operational site layout(s):
- (c) a program for ongoing analysis of the key environmental risks arising from the site establishment activities described in subsection (a) of this condition, including an initial risk assessment undertaken before the commencement of site establishment works:
- (d) details of how the site establishment activities described in subsection (a) of this condition will be carried out to:
- *i)* meet the performance outcomes stated in the documents listed in the documents identified Condition A1,
- ii) to address traffic, pedestrian access and amenity around each site, and
- iii) manage the risks identified in the risk analysis undertaken in subsection (c) of this condition; and
- (e) a program for monitoring the performance outcomes, including a program for construction noise monitoring consistent with the requirements of Conditions C9 and C11.

Nothing in this condition prevents the Proponent from preparing individual Site Establishment Management Plans for each construction ancillary facility.

Where a new site is proposed a consistency assessment will need to be prepared against the EIS, as provided in Section 6.12 of the EIS, to demonstrate consistency of the anticipated impacts and

proposed management and mitigation measures against the EIS and SPIR. The consistency assessment will be provided to TfNSW and the Environmental Representative (ER) or Secretary (as required).

Changes that are not consistent with the Infrastructure Approval will require modification under Section 5.25 of the EP&A Act and determination by the Minister for Planning and Public Spaces. The ER will be informed, and a modification application prepared and be lodged by TfNSW to the Secretary for determination.

4.1 Minor Construction Ancillary Facilities

Minor ancillary facilities are required to service the construction activities along the project alignment. Minor facilities will generally consist of minor site sheds, lunch/crib sheds and portable toilets. These compounds may be co-located near construction activities and generally located within the construction footprint to support the construction workforce. Due to the minor nature and impact of these facilities they are not required to comply with CoA C18 and will be assessed against the following criteria using the Minor Ancillary Facilities template provided in Appendix D and the process in Appendix C. The criteria for minor facilities include that facilities:

- Be located within an active construction zone within the approved project boundary
- Have minimal amenity impacts to surrounding residences, with consideration to matters such as noise and vibration impacts, traffic and access impacts, dust and odour impacts, and visual (including light spill) impacts
- Have minimal impact in respect to waste management, and no impacts on flora and fauna, soil and water, and heritage beyond those approved for the project
- Have environmental and amenity impacts that can be managed through the implementation of environmental measures detailed in the CEMP for the project.

A minor ancillary facility checklist will be prepared by the Contractor to determine whether a new or amended site is considered minor or not. If determined to be minor the checklist then requires approval by the ER. Once approved these sites will be included on the register contained in (Table A, Appendix A).

A minor ancillary facility must be assessed by the AA in accordance with condition A29.

4.2 Approved Construction Ancillary Facilities under the EIS/SPIR

Key construction compounds and ancillary facilities sites have been previously assessed for the project in the EIS and SPIR. All sites identified in the EIS and SPIR, if used, will be the subject of a SEMP. As provided in CoA C18 a separate SEMP may be prepared for each of the sites.

Approved Ancillary Facilities, as identified in the EIS, include:

- Westmead Station;
- Hawkesbury Road;
- Cumberland Hospital;
- Parramatta North;
- Factory Street;
- Fennel Street;
- Ross Street:
- O'Connell Street;

- Barrack Lane;
- Alfred Street;
- Parramatta River Bridge South;
- Parramatta River Bridge North;
- Vineyard Creek;
- Rydalmere Station (west);
- Rydalmere Station (east);
- Dundas Station;
- Kissing Point Road;
- Adderton Road Compound;
- Telopea Station; and
- Carlingford Station.

GRCLR may require all of the sites listed above. If required, this SEMP will be updated prior to establishment of any of the approved sites listed above.

4.3 New / Amended Construction Ancillary Facilities

The EIS anticipates at Section 6.12 the number and location of construction compounds may change during detailed design. Any new facility would be the subject of a Consistency Assessment against the Infrastructure Approval and an assessment conducted by the AA, while amended ones may require an consistency assessment or may be able to be approved by the ER if the change is deemed to be minor.

For all newly identified construction ancillary sites, a Consistency Assessment will need to be prepared to demonstrate how the new site(s) meet and address the factors identified in Section 6.12 of the EIS for selection of viable construction sites, which includes:

- Location on relatively level ground of sufficient size to accommodate the required facilities;
- Accessible for construction traffic and deliveries:
- Close to key construction activities to minimise transport of materials and equipment:
- On public land to avoid impacts on private land uses/property;
- On sites where acquisition of private property is required for the project alignment;
- Located away from (or able to be managed in such as way so as to not significantly impact on) heritage items, native vegetation, waterways and areas prone to flooding;
- Ability to manage public safety and access around the construction compound;
- Undeveloped nature of the site (i.e. parks) to minimise impacts on existing structures, services, and utilities.

The EIS also provides at Section 9.3 that as a minimum, the construction management plans would incorporate measures, where feasible, to manage cumulative construction impacts, including the SEMP (referred to in the EIS as *Construction compounds and ancillary facilities management Plan*) should identify:

"opportunities to collate compounds with those from other developments to minimise widespread impact and considers the location of the compound in the context of the surrounding areas and access roads required for operation of the compound".

New ancillary facilities are also to be assessed against the following performance criteria, in accordance with Section 6.12.4 of the EIS:

- Works comply with all relevant mitigation measures as outlined in the CEMP as required under the conditions of the approval.
- Does not increase daytime or night time maximum noise levels or average noise predictions identified within the EIS.
- Not require native vegetation clearing beyond that already required for the project.
- Not have any more than a minor impact on heritage items beyond those already required for the project.
- Not unreasonably affect the land use of adjacent properties.

Appendix C contains a flow chart that outlines the approvals pathways for new and amended ancillary facilities.

4.4 Construction Noise and Vibration Impact Statement

Construction Noise and Vibration Impact Statements (CNVISs) would be prepared and implemented for each ancillary facility. The CNVIS would be prepared and implemented before activities that could potentially generate noise and vibration impacts commence and will include specific mitigation measures to address the predicted impacts. Each CNVIS will be provided to the AA for review and endorsement in accordance with Condition A23(d) and Condition A29(e), respectively. The content of each CNVIS will be prepared by an appropriately qualified acoustic consultant, and will include but not be limited to:

- A description of the proposed activities (construction scenarios), duration and associated plant proposed to be used;
- Predicted noise and vibration levels based on background noise levels;
- Examination of alternative methods of construction or innovative technologies that would
 potentially reduce noise and vibration if the potential noise and vibration exceeds the
 relevant criteria;
- Description and commitment to work practices which limit noise and vibration
- Description of site-specific noise and vibration mitigation measures, including such things as respite periods;
- Justification for any activities to be undertaken outside the specified construction hours defined in CoA E21, E22 and E23.

Additionally, these three sites are located in the Rosehill and Camellia precinct, east of James Ruse Drive, where under E23, the sites are permitted to operate 24 hours a day, 7 days a week. CNVIS are being prepared for the sites and where recommended in the CNVIS mitigation measures will be implemented.

5 Ancillary facilities

Ancillary facilities are a temporary facility, normally in an enclosed area used to support construction works in nearby areas. As defined in Table 1 of the Infrastructure Approval, an ancillary facility can include one or more of the following:

- Office and amenities
- Construction compound
- Material crushing and screening plant
- Materials storage compound
- Maintenance workshop
- Testing laboratory
- Material stockpile area
- Car parking
- Truck marshalling.

5.1 Environmental setting

The proposed ancillary facilities are all located in the Rosehill and Camellia precinct (Figure 5-1). Chapter 14 of the EIS details the existing character and environment of the precinct. A summary is provided here.

The Rosehill and Camellia precinct can be separated into two distinct areas divided by James Ruse Drive, with a residential and retail area to the west and a predominantly industrial and large-scale logistical area to the east. All of the proposed ancillary facilities are located to the east of James Ruse Drive.

The historic heavy industrial uses of the land along Grand Avenue have resulted in the contamination of soils and groundwater. The Rosehill and Camellia precinct is also prone to flooding. The facilities are located outside the 1% AEP flood extent, but within the probable maximum flood zone (PMF). Existing ground levels mean the facilities sit above the 0.5% AEP flood level. The facilities would not obstruct overland flow, and would not increase flood risk elsewhere.

Key roads located within the Rosehill and Camellia precinct include Alfred Street, Tramway Avenue and Grand Avenue. There are no key intersections located within the Rosehill and Camellia precinct. Key freight and access routes (B-double routes that allow for vehicles up to 26 metres long) located within the Rosehill and Camellia precinct include James Ruse Drive and Grand Avenue. Modelling of the traffic during construction of PLR concluded traffic congestion in the Rosehill and Camellia precinct would not be impacted by vehicles associated with the PLR works.

The existing ambient noise environment is dominated by road noise, particularly from James Ruse Drive. Industrial and rail noises are also significant in the east of the precinct, where the ancillary facilities are located. An assessment of noise sensitive receivers that would be highly noise affected shows there are none to the east of James Ruse Drive (where the facilities are located). The closest sensitive receivers to 6 Grand Avenue and 8 Colquhoun Street are over 500m away on the other side of James Ruse Drive, precluding potential for an impact.

Site specific features are described in the following sections.

Figure 5-1: Location of the facilities in the Rosehill and Camellia precinct

5.2 6 Grand Avenue, Camellia

The site of the future SaMF. The site has undergone subsurface remediation works subject to render the site suitable for its proposed land use as a SaMF. This has removed all vegetation from the site. GRCLR will receive the site cleared of vegetation and with an unsealed capping layer.

The Local heritage listed tram alignment (I6) passes adjacent to the northern end of the site. Grand Avenue lies within the curtilage of the heritage tram alignment.

This site is to be used as the main SOM project compound. The facility will be established following completion of ground remediation works and capping of the site, which will be completed by others. GRCLR will receive the site along with appropriate handover documentation from the Remediation Contractor and the EPA Accredited Site Auditor. Prior to establishment, the ground will be sealed using a sediment binder to minimise dust emissions. Reapplication of the binder will continue throughout the construction operation life of the facility, as required.

The site will be established with the following:

- Site security fence with hoarding around the site perimeter.
- Cattle grid and wheel wash facilities at the exit point on Grand Avenue.
- The boundary of the site will be enclosed by an erosion sediment control fence to prevent any offsite flow, ensuring all surface flows are directed to the site's stormwater basin through gravity flow.
- Low-lying stormwater basin in the south-eastern corner to capture stormwater runoff. The basin will be connected to a groundwater treatment plant (GPT) already installed and operating on site for the treatment of the existing contaminated groundwater. The GPT will

discharge to the local sewer system in accordance with the existing trade waste agreement, otherwise the treated water would be used for dust suppression.

- Site sheds and facilities (offices, lunch rooms and amenities).
- Laydown area, including concrete washout area and hazardous material storage.
- Concrete washout area will be a lined and bunded area where washout will be allowed to solidify before it is disposed of offsite.
- Hazardous materials will be stored in the laydown area in self-bunded shipping containers in accordance with the relevant Australian Standards.
- No fuel will be stored at the site. Fuel will be supplied to site equipment from a mobile fuel tanker. This tanker may park within the laydown area when it is not required.
- Light vehicle car park.
- Breezeways and emergency muster/meeting points.
- Site-wide lighting (faced into site and down to avoid light spill). Lighting will initially be
 provided by generator powered tower lights. These will be replaced by grid-powered
 lighting after establishment of the facility.
- General construction waste bins will be located in the laydown area. General construction
 waste will be removed offsite by a licenced contractor. No general waste segregation will
 occur onsite.
- Hazardous waste bins will be located in the laydown area. Hazardous waste will be removed offsite by a licenced contractor.
- Power, water and sewer connection to the local grid. Temporary power may be required until the site is connected to the grid.

Ancillary facilities are temporary and only established to assist with construction.

The facility will be used for the following:

- Storage of equipment, materials (hazardous and non-hazardous) and plant prior to mobilisation to the construction sites.
- Refuelling of plant and equipment.
- Site facilities (offices, lunch rooms and amenities).
- Staff car parking.

The facility will operate 24 hours each day, seven days a week, in accordance with the EIS and CoA E23 of the Infrastructure Approval.

The layout of 6 Grand Avenue is shown in the ECM provided in Appendix A.

The SOM contract construction commencement is dependent on the completion of the remediation works at the SaMF site (6 Grand Avenue) by the remediation contractor. The commencement date is still unknown however is anticipated to be approximately July 2021.

5.3 8 Colquhoun Street, Rosehill

8 Colquhoun Street (Figure 5-2) is an existing private carpark adjacent to the southern boundary of 6 Grand Avenue. A commercial agreement has been established to allow this site to be used for the project. The site is tarmac-sealed with scattered landscaping, including trees. An area of unsealed grassed land is located in the south western corner. The facility is surrounded by industrial land uses, with Rosehill Gardens racetrack to the west. There are no environmental sensitivities near the facility.

Figure 5-2: 8 Colquhoun Street

This facility will be used for light vehicle parking associated with the use of 6 Grand Avenue, Camelia, and will be accessed 24/7 by the workforce and staff at the SaMF site. The facility is already fenced and has existing drainage and lighting. The capacity of the facility may be increased by placing of hard stand over the existing the grassed area if necessary. The existing trees on the site will be retained.

An off-road pedestrian access path running adjacent to Colquhoun Street will be installed to allow workers to walk between the car park and the main compound. This access path will not be accessible to the public.

The layout of 8 Colquhoun Street, and its interface with 6 Grand Avenue, is shown in the ECM provided in Appendix A.

The SOM contract construction commencement is dependent on the completion of the remediation works at the SaMF site (6 Grand Avenue) by the remediation contractor. However, the site at 8 Colquhoun Street is proposed to start site establishment in advance of completion of remediation works, in May of 2021.

5.4 Site establishment and decommissioning and rehabilitation

Key activities during establishment of ancillary facility sites that could result in impacts to the environment include:

- Use of public roads, including workforce transit, transportation and delivery of equipment, sheds, materials and wastes
- Civil works including but not limited to, installation/removal of fences, access and egress points, internal access roads, sheds and facilities
- Connection to utilities (e.g. water, power)
- Installation of environmental site controls, including sediment fences, basins, cattle grids, etc
- Storing and stockpiling of construction materials, including hazardous substances, and wastes
- Use of temporary lighting towers during night-time activities
- Unmanaged vegetation clearance.

A pre-condition assessment will be conducted prior to establishment of each site and will include a survey of any buildings and infrastructure (footpaths etc). This assessment will be undertaken to thoroughly inspect the condition of the facility prior to establishment. This report will be reviewed during decommissioning to ensure the property and surrounding areas are returned to the same or better condition.

5.5 Impacts

Likely and/or potential impacts associated with the establishment, operation and decommissioning of the ancillary facility sites include:

- Impacts to local traffic, pedestrian movements in the public domain and access to properties
- Impacts to visual and landscape character
- Impacts to the local noise environment
- Impacts to biodiversity
- Impacts to air quality
- Impacts to offsite water quality
- · Social impacts.

5.5.1 Heritage and Flooding Impacts

Heritage (non-Aboriginal and Aboriginal) impacts will not be considered further because the facilities would not interact with heritage features.

Similarly, the location and elevation of the facilities precludes any flooding impacts and therefore won't be further considered in this SEMP.

5.6 Management of ancillary facilities

Section 7 of this SEMP provides a suite of control measures that meet the requirements of the CoAs, REMMMs and EPOs, designed to avoid or minimise impacts and maximise the environmental performance of the facilities.

An initial environmental risk register is provided in Appendix B, which reviews the key activities for each facility (Section 5) and related environmental aspects to identify the potential for impact associated with each facility.

The risk assessment was undertaken in accordance with the *Transport for New South Wales* (*TfNSW*) Environment Risk Assessment Procedure (3TP-PR-206/3.0) which reviews the risk consequence and likelihood (as defined by TfNSW Project Risk Management - 3TP-PR-086), considering standard controls and assumptions, to calculate a risk rating. All environmental impacts were assessed to have a low or nil environmental risk owing to the location of the facilities, their environmental setting and the activities that would take place.

Ancillary checklists are provided in Appendices E and G, which review the environmental impacts for each facility and identify relevant mitigation measures that would be implemented to achieve the performance standards set by the CoAs, REMMMs and EPOs. The relevance of control measures provided in Section 7 to each facility is identified in Table 7-1.

The risk assessment and facility checklists will be live documents throughout the project, which will be reviewed and updated monthly, or following community complaints or incidents which are related to the establishment, operation or decommissioning of the ancillary facilities.

6 Consultation

Consultation on this SEMP was undertaken with the following stakeholders which have been selected based on the two sites identified in this SEMP:

- TfNSW Roads and Maritime;
- · City of Parramatta Council;
- Environmental Protection Authority (EPA).

Stakeholders were provided a hard copy and electronic of this SEMP, and supporting documentation, and asked to provide comments and feedback.

This consultation was undertaken between 29 October 2020 and 10 March 2021, during which time the following stakeholders provided feedback:

TfNSW Roads and Maritime.

Feedback from stakeholders was considered in the final revision of this SEMP as appropriate.

Full details of consultation undertaken, feedback received, and the GRCLR response is contained in a stand-alone A5 Consultation Report, submitted together with this SEMP to DPIE.

7 Environmental control measures

Environmental control measures and requirements to meet the objectives of this SEMP (in accordance with the requirements of the CoAs, REMMMs and EPOs) and to address impacts identified in the risk assessment (Appendix B) are outlined in Table 7-1: . The control measures would be implemented at each facility where found to be relevant following review as part of the ancillary facility checklist Appendix E, Appendix G and Table 7-1.

Table 7-1: Construction compounds and ancillary facilities management and mitigation measures

						Relevance to Yes/N-No)	facility: (Y

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference	8 Colquhoun St	Φ
SEM42	Where possible heavy vehicle movements would be limited to daytime hours.		Construction	Facility Manager	NV-2	N	Υ
SEM43	Reversing of equipment would be minimised so as to prevent nuisance caused by reversing alarms, which would be limited to the use of non-tonal reversing alarms.		Construction	Facility Manager	NV-2	N	Υ
SEM44	Loading and unloading would be carried out away from sensitive receptors, where practicable.		Construction	Facility Manager	NV-2	N	N
SEM45	Where relevant, activities would be scheduled to provide respite periods from the noisiest activities, and impacted residents should be communicated with to clearly explain the duration and noise levels for the works.		Construction	Facility Manager	NV-2	N	N
SEM46	The project would be carried out in accordance with the Parramatta Light Rail Sustainability Strategy.		Construction	Project Environment and Sustainability Manager	EPO-SU-1	Y	Υ
SEM47	The project would comply with the relevant requirements of the NSW Government Resource Efficiency Policy.		Construction	Project Environment and Sustainability Manager	EPO-SU-2	Y	Υ
SEM48	The scheduling of road deliveries across the Project would be managed to make sure that road congestion is minimised. Scheduling would consider special events and other factors that could influence the volume of traffic on the road.		Pre-establishment / construction / decommissioning	Facility Manager	EPO-TT-1/3	N	Υ
SEM49	Gate keepers will meet arriving deliveries and make sure pedestrians and cyclists are kept clear of turning vehicles.	Gate keeper	Pre-establishment / construction / decommissioning	Facility Manager	EPO-TT-2	N	Υ
SEM50	Vehicles would be prevented from waiting in public areas where they block access to adjacent properties	Gate keeper	Pre-establishment / construction / decommissioning	Facility Manager	EPO-TT-4	N	N
SEM51	All construction spoil haulage vehicles and construction plant must be clearly marked as being for the CSSI in such a manner to enable immediate identification within at least 50 metres of the vehicles and plant.		Construction	Senior Construction and Staging Manager	C21	Y	Υ
SEM52	GRCLR would not use the ancillary facilities for advertising purposes		Construction	Senior Construction and Staging Manager	E83	Y	Υ

8 Compliance management

8.1 Roles and responsibilities

Roles and responsibilities for ancillary facilities and compound management are provided in Table 8-1. Specific responsibilities for the implementation of environmental controls are detailed in Section 7 of this Plan.

Table 8-1: GRCLR Roles and Responsibilities

Title	Roles, responsibilities and authorities relevant to this Plan
GRCLR Project Director	 Provide environmental leadership across the entire SOM package of works and ensure all SOM obligations under the CoA, legislation and contract to appropriately implement this SEMP are fulfilled.
GRCLR Communications Manager	 Ensure environmental complaints and enquiries regarding the establishment of ancillary facilities are recorded and responded to appropriately Identify residential and/or commercial stakeholders who are adjacent to or adjoin the ancillary facilities and consult them prior to ancillary facilities establishment.
GRCLR Environment, Planning and Sustainability Manager	Provide environmental oversight, direction and leadership regarding the environmental management of the Project Ensure this SEMP satisfies legal and Project requirements
	 Act as the primary contact for TfNSW, the ER and the AA Oversee the development, implementation, assessment and verification of sustainability measures for all works
	Oversee environmental monitoring, inspections and audits
	Oversee investigation and close out of any environmental complaints
	Attend all EPS meetings, inspections undertaken by the ER and monthly Environment Reference Group meetings
	Interface and co-ordinate with INFRA and other PLR contractors to achieve environmental alignment and management of cumulative impacts (including, but not limited to: OOHW, heritage, tree impacts)
	Meet all requirements and data collection required to achieve an ISCA score of 70 (as built)
	•
Design and Construct Project Director	Provide environmental leadership and ensure adequate resources are provided to effectively implement this SEMP.
Senior Construction and Staging Manager	Manage the delivery of the construction process including establishment of ancillary facilities
	Ensure work is planned and executed to maintain compliance with environmental requirements.
	Ensure work is planned and executed to maintain compliance with environmental requirements.

Title	Roles, responsibilities and authorities relevant to this Plan
Civil Construction Team	Ensure appropriate mitigation and management measures are implemented and maintained on site
	Implement corrective or preventative actions as required to fulfil the requirements of this Plan.
	Ensure appropriate mitigation and management measures are implemented and maintained on site
	Ensure regular inspections and monitoring requirements are undertaken to check effectiveness of environmental controls
	Report environmental incidents and complaints immediately.
	Attend Project inductions and environmental awareness training relevant to the ancillary facility
	Understand and comply with environmental responsibilities
	Be aware of surrounding sensitive environmental and social constraints and act in a manner that minimises impacts to those sensitive areas
	Notify their supervisor immediately of any environmental incidents, near misses and hazards.
Project Environment and Sustainability Manager	Is responsible for the on site environmental management and reports to the GRCLR Environment, Planning and Sustainability Manager
	Ensure this SEMP is implemented and that appropriate training is provided regarding the requirements of this Plan
	Obtain all necessary environmental approvals prior to commencing ancillary facilities establishment
	Ensure inspections, observations, monitoring and audits are performed so that compliance is maintained
	Ensure all non-compliances are reported
	Ensure environmental risks and controls are regularly reviewed
	Act as the main point of contact for the GRCLR Environment, Planning and Sustainability Manager
	Notify TfNSW, the ER and agencies as required in response to environmental incidents
	Ensure corrective and preventative actions are taken after incidents and lessons are shared with other projects or parent companies.
	Assist in the development and delivery of environmental training and awareness related to the establishment and operation of ancillary facilities
	Undertake inspections, observations, monitoring and audits as required.
TfNSW Representative	Receive a copy of this SEMP
	Review documentation provided by GRCLR, where required.
Environmental	Review and endorse this SEMP prior to submission to DPIE
Representative (ER)	Monitor the implementation of the SEMP and advise TfNSW on the achievement of this Plan

Title	Roles, responsibilities and authorities relevant to this Plan
	Consider and advise TFNSW, and be the principal point of advice for the Project in relation to the environmental performance of the ancillary facilities
	Ensure that environmental auditing is undertaken in accordance with TFNSW's environmental management system
	Recommend additional or site-specific environmental controls for proposed ancillary facilities or existing ones in response to observations, inspections and/or complaints
	Approve/reject additional ancillary facilities and minor amendments to this SEMP
	Be given the authority and independence to require reasonable steps be taken to avoid or minimise unintended or adverse environmental impacts
	Conduct inspections and audits to monitor the implementation of this SEMP
	Be consulted in responding to the community concerning the environmental performance of the ancillary facilities where the resolution of points of conflict between TFNSW and the community is required.
Acoustics Advisor (AA)	CoA A26 requires a suitably qualified and experienced AA to be engaged for the duration of construction and for no less than six months following completion of construction in accordance with the Planning Approval. The nomin The CoA A29 requires the AA to fulfil the following requirements:
	Receive and respond to communication from the Secretary about the performance of the CSSI in relation to noise and vibration
	Consider and inform the Secretary on matters specified in the terms of this approval relating to noise and vibration
	Consider and recommend, to the Proponent, improvements that may be made to work practices to avoid or minimise adverse noise and vibration impacts
	 Consider consultation outcomes with affected receivers to determine the adequacy of noise mitigation and management measures including work hours and respite periods
	 Review all noise and vibration documents required to be prepared under the terms of this approval and, should they be consistent with the terms of this approval, endorse them before submission to the Secretary (if required to be submitted to the Secretary) or before implementation (if not required to be submitted to the Secretary)
	Regularly monitor the implementation of all noise and vibration documents required to be prepared under the terms of this approval to ensure implementation is in accordance with what is stated in the document and the terms of this approval
	In conjunction with the ER, the AA must:
	 as may be requested by the Secretary, help plan, attend or undertake audits of noise and vibration management of the CSSI including briefings, and site visits;
	 if conflict arises between the Proponent and the community in relation to the noise and vibration performance during construction of the CSSI, follow the procedure in the Community Communication Strategy approved under Condition B3 of this approval to attempt to resolve the conflict, and if it cannot be resolved, notify the Secretary;
	 consider relevant minor amendments made to the CEMP, relevant sub-plans and noise and vibration monitoring programs that require updating or are of

Title	Roles, responsibilities and authorities relevant to this Plan
	an administrative nature, and are consistent with the terms of this approval and the management plans and monitoring programs approved by the Secretary and, if satisfied such amendment is necessary, endorse the amendment. This does not include any modifications to the terms of this approval;
	assess the noise impacts of minor construction ancillary facilities; and
	o prepare and submit to the Secretary and other relevant regulatory agencies, for information, a monthly Noise and Vibration Report detailing the AAs actions and decisions on matters for which the AA was responsible in the preceding month (or another timeframe agreed with the Secretary). The Noise and Vibration Report must be submitted within seven days following the end of each month for the duration of construction of the CSSI, or as otherwise agreed with the Secretary.
	Additionally, the AA is to:
	 Be consulted and involved in the preparation and implementation of the Out of Hours Works Protocol in accordance with CoA E28, and Report to the Secretary on outcomes of the community consultation, the identified works and respite periods and the scheduling of the likely out-of-hour works in accordance with CoA E37.

8.2 Training

All employees, contractors and utility staff working at a facility will undergo site induction training relating to the development and operation of the ancillary facility. Environmental requirements will be explained to attendees during site induction and on-going training via tool box meetings, prestart briefings and notifications. All employees (including subcontractors) will receive induction/training in the following:

- GRCLR Environment and Sustainability Policy
- Facility environmental objectives and targets
- Understanding individual authorities and responsibilities
- Site environmental rules
- Potential consequences of departure from rules
- Emergency procedure and response (e.g. spill clean-up)
- Basic understanding of their legal obligations.

A record of all environment inductions will be maintained on-site. The GRCLR Environment, Planning and Sustainability Manager may authorise amendments to the induction at any time. Possible reasons for changes to the induction may be modifications to the Infrastructure Works, legislative changes or amendments to this SEMP.

An Induction Register is maintained within the Project Safety Records.

Personnel performing tasks which can cause significant environmental impacts will be competent on the basis of appropriate education, training and / or experience. Specific training for high risk aspects would include the following, as relevant according to the sensitivities of the ancillary facility:

Erosion and sediment control

- Heritage awareness
- Contamination awareness
- Environmental legal obligations
- Energy and resource usage
- Community and stakeholder awareness
- Biodiversity.

8.3 Environmental incident and emergency response

8.3.1 Environmental incident classification

TfNSW Environmental Incident Classification and Reporting 9TP-PR-105 defines an incident as 'an occurrence or set of circumstances, as a consequence of which pollution (air, water, noise and land) or an adverse environmental impact has occurred, is occurring, or is likely to occur. Table 8.2 provides incident definitions and Table 8.3 displays the five levels of environmental incident, as defined by the GRCLR Incident Management Plan.

Table 8-2 Environmental Incident Definitions

Туре	Definition	Source
Environmental Incident	An occurrence or set of circumstances that causes, or threatens to cause, material harm.	Infrastructure Approval
Material harm	Is harm that:	Infrastructure Approval
	a) Involves actual or potential harm to the health or safety of human beings or to ecosystems that is not trivial, or	
	b) Results in actual or potential loss or property damage of an amount, or amounts in aggregate, exceeding \$10,000 (such loss includes the reasonable costs and expenses that would be incurred in taking all reasonable and practicable measures to prevent, mitigate or make good harm to the environment)	
Notifiable event	Any environmental incident or non-compliance that triggers a specific statutory requirement to notify a regulatory authority.	TfNSW Environmental Incident Classification and Reporting 9TP- PR-105
Non-compliance	An occurrence, set of circumstances or development that is a breach of the planning approval but is not an environmental incident.	TfNSW Environmental Incident Classification and Reporting 9TP- PR-105

Table 8-3 Incident Classification

GRCLR Incident Level	Incident Level Description	Example Events
Level 1	Managed at the site level but may need external resourcing over and above that which is usually used by local work teams to manage incidents.	Minor spills.
Level 2	 Requires off-site co-ordination with moderate levels of external resourcing and support; and/or Causes or has the potential to cause a moderate impact on the environment. 	Minor fire.
Level 3	Major incident/event that impacts the community beyond the scope of a Level 2 incident.	Emergency evacuation of all or part of the work site; or LRV serious collision, fire or derailment.
Level 4	Major incident which requires the activation of the IMT for operational and strategic direction.	 Any emergency that significantly impacts on Delivery Activities; Any incident that requires the deployment of EMLOs to external agencies; and Incident involves multiple emergency agencies i.e. Police Forward Command Post.
Level 5	Requires or has incurred Combat Agency support/ input. State-wide emergency protocols have been triggered for this level of incident.	Major disaster.

8.3.2 Incident response

In accordance with CoA E26, on becoming aware of the need for emergency construction works, GRCLR will notify the ER of the need for those activities or works. GRCLR will also use best endeavours to notify all affected sensitive receivers of the likely impact and duration of those works.

The immediate response to all incidents is to make the area safe and then undertake any reasonable actions to prevent further environmental harm without posing additional risk to staff, workforce or the public. The following steps will be taken.

All incidents will be immediately reported to the Project Environment and Sustainability Manager or Facility Manager who will assess the situation and manage the following steps according to the scope of incident:

- Stop works
- Immediately take all reasonable steps to contain further damage or danger to personnel, public, property and the environment

- Inform Facility Environmental Manager or Facility Manager
- Contact emergency service personnel as necessary (e.g. fire dept., spill clean-up services, etc). Site emergency response team will also be contacted
- Verbally report incident to TfNSW and the ER
- TfNSW will inform relevant authorities in accordance with the regulatory requirements (EPA immediately and DPIE within 24 hours in accordance with CoA A47)
- Provide notification to the HSE General Manager and Head of Legal immediately via phone and email
- Inform the Client's Representative as necessary and in accordance with contractual requirement
- Complete a detailed report of the incident
- Liaise with the Client's Representative regarding corrective and preventive actions required and the timeframes within which these actions must occur
- The designated personnel will undertake the corrective and preventive actions.

The incident response process is to be periodically tested via an environmental emergency drill at intervals not exceeding 12 months.

8.3.3 Notification and Reporting of Incidents

TfNSW and the ER will be notified verbally immediately in the event of an environmental incident, and in writing within 4 hours, in accordance with the *TfNSW Environmental Incident Classification* and Reporting Procedure (9TP-PR-105). Additional details of the incident would be provided within 48hrs.

Initial notifications will include the following information as a minimum:

- Time, date, nature, duration and location of the incident
- · Location of the place where incident has occurred
- Nature, the estimated quantity or volume and the concentration of any pollutants involved
- Circumstances in which the incident occurred and cause of the incident, if known
- Action taken or proposed to be taken to deal with the incident.

A report of the incident, including the results of the incident investigation will be provided to TfNSW within a week of the incident in accordance with the *TfNSW Guide to Environmental Incident and Non-compliance Reporting using the INX System 9TP-SD-005 and CoA A45*, unless otherwise agreed. The report would include the time and date of the incident, details of the incident and would identify any consequent non-compliance with the environmental requirements of the Project.

TfNSW hold the primary responsibility for notifying and reporting incidents to DPIE (CoA A44) in writing (compliance@planning.nsw.gov.au). The notification must identify the Project (including the CSSI application number) and set out the location and nature of the environmental incident. If an incident requires EPA notification under the POEO Act, TfNSW will also notify DPIE within 24 hours after the notification was given to the EPA. GRCLR will assist and cooperate with TfNSW to fulfil these obligations. TfNSW and GRCLR will implement all written requirements of the Secretary, which may be given at any point in time, to address the cause or impact of an incident within any timeframe specified by the Secretary or relevant public authority in accordance with CoA A46.

Notification and reporting of an incident as defined in Table 8.2, to the relevant authorities, ER and other stakeholders will also be undertaken as required. This will generally be undertaken by TfNSW with the support of the GRCLR Environment, Planning and Sustainability Manager.

Subcontractors on the Project will be required to notify GRCLR of all environmental incidents, with verbal notification to be provided immediately. Failure to complete the required notifications will be considered a system non-compliance.

8.3.4 Incident Investigation

Incident investigation will consider the following:

- Sequence of events that led to the incident.
- The key findings of the investigation (i.e. what are the main causes of the incident).
- The management methods to be changed and/or implemented to avoid the incident reoccurring
- What can we learn from this investigation into the incident?

Section 2.8 of the *TfNSW Standard Requirements* specifies the following incident investigation protocols:

- GRCLR will undertake a preliminary investigation of all Class 3 incidents within five business days of the incident, unless otherwise agreed by TfNSW. Major investigations must be completed within 20 business days of the incident. Terms of reference for major investigations will be issued by TfNSW. If TfNSW requires the appointment of an external independent investigator, GRCLR will bear the cost of that appointment
- TfNSW may participate in any investigation being undertaken by GRCLR or initiate its own investigations. If TfNSW instigates its own investigation GRCLR will provide TfNSW with all assistance reasonably required for the purposes of the investigation, this includes the waiver of legal professional privilege over any investigation report prepared by, or on behalf of, GRCLR. The parties may agree that any investigation report that is subject to legal professional privilege may, between GRCLR and TfNSW, be subject to a common interest privilege
- In the event of an incident or issue, GRCLR will not contact or provide information to any
 person (other than that which is required to directly manage the Incident or to comply with
 law), including any stakeholder, the media or the public, without the prior approval of the
 TfNSW. GRCLR will make available senior personnel to respond to the community, the
 media and other stakeholders when required by TFNSW.

8.4 Monitoring and inspection

Key characteristics of the facility operations and activities which have a potential to impact the environment will be regularly monitored and measured with the goal to achieve the targets set out in Section 2.3 of this Plan. Table 8-3 sets out the monitoring strategy for each of the facilities. The results of the monitoring will be recorded by the Project Environment and Sustainability Manager to track performance.

Table 8-4: Monitoring requirements

					Releva	ant to:
Subject of monitoring method of monitoring	Location of monitoring	Frequency of monitoring	Responsibility	Target/exceedance level	6 Grand Ave	8 Colquhoun St
Condition of boundary fence and hoarding - visual	Site perimeter	Weekly	Facility Manager	No tears/graffiti with a clean appearance	Y	Υ
Efficacy of erosion and sediment control - visual	Site perimeter	Weekly	Facility Manager	Control measures are in good condition and functioning as designed	Υ	Υ
Site housekeeping, including contamination and escape of wastes and materials - visual	Site wide	Weekly	Project Environment and Sustainability Manager	No litter, wastes or materials outside of their designated storage area	Y	Υ
Sensitive area barriers/fencing - visual	Site wide	Weekly	Project Environment and Sustainability Manager	Barriers are in good condition and the sensitive area has not been compromised	N	N
Dust emissions - visual	Site wide	Daily	Project Environment and Sustainability Manager	Observation of dust emissions would trigger dust suppression strategies to prevent dust becoming airborne.	Y	Y

					Relevant to:	
Subject of monitoring method of monitoring	Location of monitoring	Frequency of monitoring	Responsibility	Target/exceedance level	6 Grand Ave	8 Colquhoun St
Dust emissions - equipment	Specific locations	Dust monitoring devices would be installed if dust emissions become a significant issue at offsite properties	Project Environment and Sustainability Manager	No dust impacts to offsite properties.	Υ	N
Clean public roads - visual	Exit of facility	Daily	Facility Manager	Clean road free of debris and soil	Υ	N
Noise emissions from vehicles and equipment - equipment	All site vehicles and equipment	Monthly	Facility Manager	Noise emissions would meet the manufacturers' specifications.	Υ	N
Site speed limit - equipment	Site wide	Periodically	Facility Manager	Speed limit set to minimise dust emission. Vehicles adherence to the speed limit to be monitored	Y	N

					Relev	Relevant to:	
Subject of monitoring method of monitoring	Location of monitoring	Frequency of monitoring	Responsibility	Target/exceedance level	6 Grand Ave	8 Colquhoun St	
Weather – online forecast	Site wide	Daily	Project Environment and Sustainability Manager	Dust generating activities to be restricted or suitably mitigated on dry windy days	Y	N	
Glare/light spill - visual	Site wide	Monthly	Facility Manager	No light spill into adjacent properties	YY		
Idling equipment - visual	Site wide	Weekly	Project Environment and Sustainability Manager	No plant to be left idling	Y	N	
Noise emissions at sensitive receivers - equipment	Noise- sensitive receivers	During high noise activities where a CNVIS has identified a potential impact	Project Environment and Sustainability Manager	No noise affected sensitive receivers.	N	N	
Waste tracking – tracking register	Site wide	Monthly	Project Environment and Sustainability Manager	No waste non-conformances	Y	N	

8.4.1 Environmental performance management and reporting

Environmental Inspection Report

An Environmental Inspection Report will be used to monitor environmental issues and performance at each facility. The report will be completed on a weekly basis and submitted to the Facility Manager.

Non-conformances

Non-conformance to the requirements of this Plan that cannot be rectified immediately will be recorded and addressed by raising a Non-conformance and Corrective Action Report. The Corrective Action Report will document the agreed actions and timeframes for addressing the environmental non-conformance. If required, works in the affected area are to cease until corrective actions are made and the non-conformance is closed out. Environmental non-conformances of a serious nature are to be closed out immediately.

Non-conformances shall be managed and recorded in accordance with:

- TfNSW Guide to Environmental Incident and Non-compliance Reporting using the INX System 9TP-SD-005
- TfNSW Environmental Incident Classification and Reporting 9TP-PR-105.

Subsequent corrective and preventive actions may include:

- Undertaken an environmental investigation or monitoring program to determine risk or impact to identified receptors
- Site remediation and rehabilitation
- Increased site inspections and monitoring requirements
- Increase environmental awareness (re-training, tool-box meetings)
- Review and improve existing environmental controls job safety analyses/ work method statements and management plans.

The Project Environment and Sustainability Manager (or delegate) will monitor non-conformances closely and track their close out. Re-inspection of the work or item is to be conducted before close out.

Environmental Monitoring Report

A monthly Environmental Monitoring Report will be produced and submitted to TfNSW, which will report on the following:

- Result on the monitoring strategy presented in Table 8-4
- Environmental improvements and initiatives or corrective measures
- Environmental incident management, including the outcomes from incident investigations and corrective actions.

8.5 Compliance reporting

A Project-wide Compliance Tracking Program (CTP) has been developed and is maintained by TfNSW in accordance with CoA A30. GRCLR provides updates to TfNSW to incorporate into the CTP. The CTP contains all the CoAs (Table 3-1), REMMMs (Table 3-2) and EPOs (Table 3-3) in this Plan and satisfy the requirements of CoA A30 to A34. The compliance reporting required under the CTP will record the progress and status of compliance.

The CTR will be reviewed and endorsed by the ER every six months, and will be maintained by TfNSW for the duration of the Project, and for a minimum of one (1) year following the commencement of operations.

8.6 Licences and permits

To undertake the establishment of the ancillary facilities, the following licenses and permits may be required:

- Road Occupancy License these will be sought directly from Sydney Co-Ordination Office
- Sydney Water permit to connect services (sewer / water)
- Electrical permit to connect site power (Endeavour Energy / Ausgrid).

Based on Clause 33(4)(d) of Schedule 1 of the POEO Act the Project is only required to have an Environment Protection Licence (EPL) for the construction of rail infrastructure, however it is not required for establishment of the ancillary sites. Once construction commences, reporting under the EPL will include activities at ancillary sites identified in the premise maps as being subject to the provisions of the EPL.

8.7 Auditing

Audits (both internal and external) will be undertaken to assess the effectiveness of environmental controls, compliance with this Plan, CoAs/REMMMs/EPOs and other relevant approvals, licenses and guidelines.

8.7.1 Internal audits

Internal auditing will be undertaken generally on a six-monthly basis throughout the Project. The purpose of internal auditing is to verify compliance with:

- The CEMP and sub-plans (including this Plan)
- Planning Approval requirements (CoAs, REMMMs and EPOs)
- Any relevant legal and other requirements (e.g. licenses, permits, regulations, TfNSW contract documentation).

The internal audit scope will focus on activities of high environmental risk as identified in the Project environmental risk assessment. The findings of the internal audits will be used to update the CTP and this Plan.

An audit report will be issued to management for action. Actions will be followed up for close-out of actions within 1 month of the issue of the audit report.

8.7.2 Independent audits

An Independent Environmental Audit will be conducted every year (alternate six months to the internal audit) for the duration of the construction program against the relevant terms of the Infrastructure Approval, the CEMP and management sub plans, including this Plan.

Internal and external environmental audits would be undertaken in accordance with AS/NZS ISO 19011:2014 Guidelines for Auditing Management Systems and follow an environmental audit programme submitted to the Secretary for information no later than one month before commencement of construction. The environmental audit programme, as submitted to the Secretary, will implemented for the duration of construction. An indicative audit programme is

provided in the CEMP, which will be updated following approval of TfNSW and the Secretary. TfNSW has submitted the audit program to DPIE as part of the CTP.

The Independent Environmental Audits will be undertaken by a suitably qualified, experienced and independent auditor.

In accordance with CoA A43, the Independent Environmental Audit Report will be submitted to the Secretary for information, with a response to any recommendations contained in the audit report within six weeks of completing the audit.

8.7.3 Sub-contractor audits

Where they are required by the Project risk assessment, sub-contractors will be audited as determined by the Project Environment and Sustainability Manager using a risk-based approach and/or in response to repeat incidents.

9 Review and improvement

9.1 Continuous improvement

Continuous improvement of this Plan will be achieved by the ongoing evaluation of environmental management performance against environmental policies, objectives and targets for the purpose of identifying opportunities for improvement.

The continuous improvement process will be designed to:

- Identify areas of opportunity for improvement of environmental management and performance
- Determine the cause or causes of non-conformances and deficiencies
- Develop and implement a Plan of corrective and preventative action to address any nonconformances and deficiencies
- Verify the effectiveness of the corrective and preventative actions
- Document any changes in procedures resulting from process improvement
- Make comparisons with objectives and targets.

9.2 SEMP update and amendment

Periodic assessments and reviews of this SEMP will be conducted by project management personnel as required or at least every six months from the establishment of the ancillary facilities, or in response to an incident or non-conformance.

The review will generate actions for the continual improvement of the SEMP. The responsible environmental manager will record the outcomes of the review, including subsequent changes, how the site/project team will be informed of the changes and when the reviewed SEMP will be submitted to the ER for review and approval.

Only the GRCLR Environment, Planning and Sustainability Manager, or delegate, has the authority to change any of the environmental management documentation.

A copy of the updated Plan and changes will be distributed to all relevant stakeholders in accordance with the approved document control procedure.

Appendix A – Approved and proposed ancillary facilities and associated ECMs and TCPs

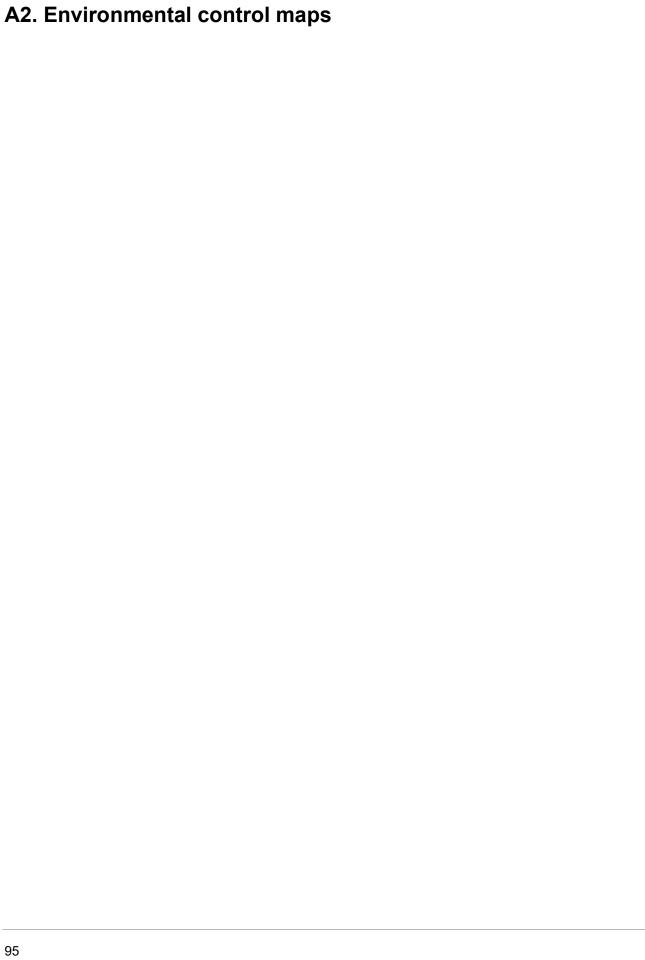

A1. Approved facilities

Table A provides details of ancillary facilities that are approved for use by the Project. The table will be updated when new facilities are approved.

Table A: Identified locations of the ancillary facilities for this Project, approved in accordance with EIS / SPIR

Facility ID	Lot ID	Facility Name	Chainage	Identified and assessed in the SPIR (C18)	Proposed boundary changes from SPIR?	SPIR Proposed Use (including hours of use)	[Contractor] Proposed Use	Form of Approval EIS/SPIR/CoA or ER (Minor of pre construction)

Stop Work Requirements Contact Information	Requirements			
Unexpected heritage find	Stop all work in vicinity immediately. Contact Project Environmental Manager. Project Environmental Manager to contact TRISW Environmental Manager and implement Unexpected finds protocol			
Water discharge	No water is to be discharged without prior approval from TfNSW. Refer to TfNSW Water Discharge and Reuse Guideline			
Contamination /Hazardous Materials—Suspected contamination material discovered	Stop all work in vicinity immediately. Contact Project Environmental Manager. Contact TRNSW Environmental Manager. Follow TfNSW Environment Incident and Classification Reporting Guidelines.			
Hydrocarbon / Chemical Spill, Contaminated Material Release or Turbid Run-off to Surface Water	Contact the Project Environmental Manager immediately and without delay and follow instruction. A fully stocked spill kit is to be present in the work area			
Dust emissions	Stop dust generating work immediately. Contact Project Environmental Manager. Recommence work only when controls are implemented and effective.			
Native fauna found within work site	Stop potentially impacting work. Do not approach and contact Wires.			

Incident Response

In the event of an environmental incident (for example hydrocarbon spill, turbid water run off, unexpected heritage find, contamination or tree damaged) the Project Environmental Manager must be contacted immediately. The Project Environmental Manager is to contact the TfNSW Environmental Manager and Project Manager without delay. Act on

The incident is to be reported through INX in accordance with the Environment Incident and Classification Reporting

until after public consultation

Hours of Work

Approved hours of work at the compound:

24hrs 7 day per week

Where possible, deliveries will be scheduled outside of peak traffic hours.

Where feasible limiting heavy vehicle movements to daytime hours

General

Vehicles will idle on the side of Colguhoun Street while contacting the gatekeepers prior to entering the facility.

Noise and Vibration

No unnecessary shouting or use of load radios is to be permitted.

Where possible heavy vehicle movements would be limited to daytime hours.

Reversing of equipment would be minimised so as to prevent nuisance caused by reversing alarms, which would be limited to the use of non-tonal reversing alarms.

The Early Works remediation contractor will manage remediation of the site. The remediation works will deliver the remediated site, including any details of any ongoing management requirements. Control measures put forth by the remediation contractor must be implemented to effectively manage site contamination.

Chemical Fuel Storage and Use

General Site Environmental Control Measures

Any chemicals brought onto site must be accompanied by a materials safety data sheet (MSDS).

All chemicals or hazardous materials are to be stored within the worksite boundary

No fuel will be stored at the site.

Plant is to be checked daily for leaks.

All spills and leaks would be reported to site managers

All chemicals and fuels would be stored in sealed containers as per appropriate regulations and guidelines.

Hazardous materials and wastes would be stored in appropriately designed storage facilities, in accordance with Australian Standards and DECCW guidelines

Chemical spill kits would be readily available and accessible to facility workers. Kits would be kept across the facility and on specific construction vehicles, and all hazardous materials spills and leaks would be reported to site managers and actions would be immediately taken to remedy spills and leaks.

Employees would be trained in the correct use of spill kits.

Flora and Fauna

No trees are located within the compound area. No overhanging branches are to be trimmed.

If wildlife is encountered on site. Do not approach and contact WIRES

Air Quality

Manage stockpile areas to minimise potential pollution of local air

Stockpiles would be covered with an appropriate material if left undisturbed for a long period

Vehicles and machinery are to be switched off when not in use. Equipment, machinery and vehicles used on-site are to be maintained to manufacturer's specs to minimise emissions.

Dust emissions would be monitored visually by facility staff. The occurrence of dust emissions would trigger dust suppression strategies.

Plan activities during unfavourable wind conditions accordingly to avoid dust emissions.

Dust suppression techniques to be applied to stockpiles to prevent dust emission

All loads will be covered when travelling offsite

Unsealed ground will be treated with a binder to minimise dust

Speed limits will be imposed to limit the generation of dust from

Dust monitoring devices would be installed if dust emissions become a significant issue to offsite receivers

Waste and Recycling

Waste would be managed through the waste hierarchy established under the Waste Avoidance and Resource Recovery Act 2001 management hierarchy

Waste would be classified according to OEH's Waste Classification Guidelines (2016) and appropriately managed in accordance with its classification.

Waste is to be disposed at an appropriately licensed facility. Waste volumes are to be tracked and recorded for reporting purposes as per the Waste Data Collection Booklet.

The compound will be maintained litter free at all times.

TfNSW branded shade cloth will be installed on existing boundary fencing and maintained in good condition.

Good housekeeping practices are to be implemented at all times during works.

Stockpile heights will be minimised where possible to be not visible above the fence line (line of sight), or if not possible, covered.

The road outside the site will be kept clean and free from

Deposition of soil on to public roads will be prevented through the use of controls measures e.g. rumble grids/wheel washes/cleaning of loose material off tailgates.

The facility lighting strategy would be designed to minimise glare and light spill on adjacent properties

Manage stockpile areas to minimise potential pollution of watercourses, groundwater.

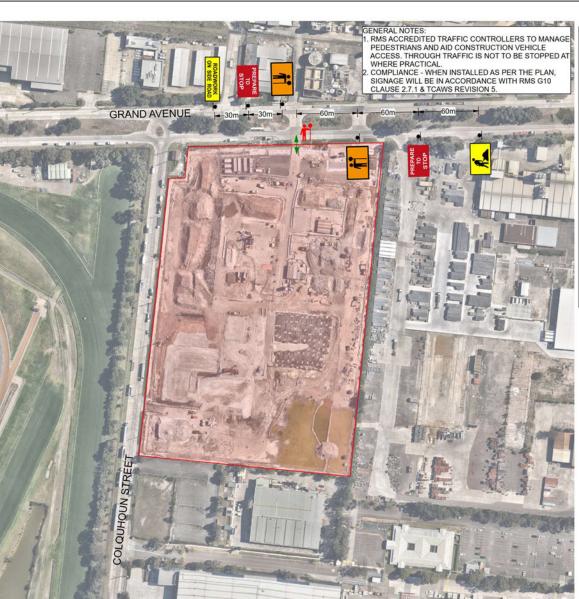

Erosion sediment control measures would be implemented in accordance with Landcom's (2004) Managing Urban Stormwater: Soils and Construction and Construction Volume 2 (DECC, 2008)

Sediment control fence to be regularly inspected and maintained Stockpile sites would, where feasible and reasonable, be located away from any surface runoff flow paths and above the 10% AEP flood levels.

Stockpile materials will be separated according to class/nature to avoid detrimental mixing and/ or cross contamination.

www.invarion.com

TRAFFIC MANAGEMENT NOTES-

I, NOT ALL DIMENSIONS SHOWN ARE TO SCALE.

2. LOCATION OF SIGNS ARE TO BE CONFIRMED ON-SITE TO ENSURE APPROPRIATE VISIBILITY. 3. ALL SIGNS TO BE MINIMUM SIZE A.
4. ALL SIGNS TO BE CLASS 1 RETROREFLECTIVE.

4. ALL SIGNOS TO GE CLASS I RETROREPTECTIVE;
S. ALL IRARFIC CONTROL PLANS ARE TO BE IMPLEMENTED IN ACCORDANCE WITH THE RMS
"TRAFFIC CONTROL I WORK SITES" MANUAL, VER 5 (RMS 2018) AND AUSTRALIAN
STANDARDS AST 74.2-3:2009 MANUAL OF UNFORM TRAFFIC CONTROL DEVICES, PART 3: 6. THIS TRAFFIC CONTROL PLAN MUST BE SETUP BY A PERSON HOLDING AN TIMPLEMENT

TRAFFIC MANAGEMENT PLANT TICKET AND THE RMS TRAFFIC CONTROL AT WORK SITES CHECKLIS SHALL BE COMPLETED PRIOR TO INPLEMENTATION.

7. THE ACCREDITED PERSONNEL SHALL IMPLEMENT THE APPROVED TCP BEFORE ANY

PHYSICAL WORK COMMENCES AND ENSURE A COPY OF THE TCP IS KEPT ON-SITE. THE ACCREDITIED PERSONNEL SHALL ALSO DRIVE THROUGH THE SITE BEFORE WORKS BEGIN TO ENSURE THAT THE TCP HAS BEEN IMPLEMENTED CORRECTLY AND THAT IT WILL WARN, INSTRUCT AND GUIDE ROAD USERS AS DESIGNED. ANY VARIATIONS MADE TO THE PLAN MUST BE MARKED ON THE PLAN AND INITIALLED BY THE ACCREDITED PERSONNEL. 8. IT IS THE RESPONSIBILITY OF AN ACCREDITED PERSONNEL WITH A "PREPARE A WORK ZONE TRAFFIC MANAGEMENT PLAN" TICKET TO ENSURE THE FOLLOWING:

THE INTEGRITY OF ALL TRAFFIC CONTROL MEASURES THROUGH TO THE FINAL REMOVAL. THIS INCLUDES DAILY CHECKS OF ALL SIGNS AND DEVICES, THE CORRESPONDING RECORDS OF CHECKS SHALL BE KEPT ON FILE FOR AUDITING PURPOSES.

VEHICULAR ACCESS AND SERVICING REQUIREMENTS ARE TO BE MAINTAINED AT ALL TIMES TO ADJACENT PROPERTIES AFFECTED BY TRAFFIC CONTROL MEASURES.

AT ALL TIMES AN UP-10-DATE COPY OF TRAFFIC CONTROL AT WORK SIES" SHOULD BE AVAILABLE FOR REFERENCE AND IMPLEMENTATION AS REQUIRED ON-SITE.

9. ALL WORKERS WILL BE CONFINED TO THE DEDICATED WORKS AREA SHOWN ON THE

10. IF THE WORKSITE IS LEFT UNATTENDED IT IS THE CONTRACTOR'S DUTY TO ENSURE THAT THE APPROPRIATE MEASURES ARE TAKEN TO PROVIDE A SAFE ENVIRONMENT FOR VEHICLES

THE APPROPRIATE MEASURES ARE TAKEN TO PROVIDE A SAFE ENVIRONMENT FOR VI AND PEDESTRUMS TO RELEVANT AUSTRALIAN STANDARDS.

11. TRAFFIC CONTROLLERS (TI-34) AND PREPARE TO STOP (TI-18) SIGHS ARE TO BE COVERED OR REMOVED WHEN TRAFFIC CONTROLLER/S ARE NOT ON SITE.

12. ALL SIGHAGE IS TO BE CLEAN, CLEARLY VISIBLE AND NOT OBSCURED.

13. ROADWORK SIGNS TO BE COVERED OR REMOVED WHEN WORKERS ARE NOT ON SITE. 14. ALL WORKERS MUST ADHERE TO THE APPLICABLE SAFE WORK DISTANCE AS DESCRIBED IN AS1742.3:2009.

15. ALL DISTANCES BETWEEN SIGNS ARE TO BE IN ACCORDANCE WITH SECTION 2.5.2 OF AS 1742.3:2009. HOWEVER, MODIFICATIONS CAN BE MADE TO SUIT SITE CONDITIONS.

Appendix B – Initial Environmental Risk Assessment

Risk Ref#	Environmental Aspect*	Impact **	Environmental Impact Category	Site Specific Risk Description ***	Risk category	Project specific Location(s)	Existing Standard Controls and Assumptions			
1.1	Project vehicle movements in the public domain	Congestion of public roads	Traffic, Transport and Access	Vehicle movements to and from the facilities will include both light (workers) and heavy vehicles (equipment and materials), including some long slow-moving vehicles (up to 19m). The additional volume of traffic and the type of vehicles could cause congestion to the public roads, although the facilities are all accessible from high-capacity roads.	Reputation - Community	All facilities	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Likely	Low
1.2	Project vehicle movements in the public domain	Noise impacts to sensitive receivers	Noise and Vibration	The project vehicles will use established busy roads; therefore, it is unlikely the project vehicles will contribute significantly to the existing noise environment, which is already dominated by road noise.	Reputation - Community	All facilities	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industrystandard control measures	Negligible	Likely	Low
1.3a	Project vehicle movements in the public domain	Preventing access to adjacent properties and free movement of pedestrians	Traffic, Transport and Access	N/A - both facilities have no pedestrian pathways or adjacent properties that could be affected by vehicles accessing the facilities	Reputation - Community	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industrystandard control measures	Negligible	Likely	Low
1.4	Project vehicle movements in the public domain	Reducing the number of available public car parking spaces	Traffic, Transport and Access	All facilities have staff parking, therefore there should not be a significant impact to public parking. Note the purpose of the site at 8 Colquhoun Street is to provide additional off street parking for the 6 Grand Avenue site.	Reputation - Community	All facilities	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Unlikely	Low
1.5a	Facility establishment	Reduction in visual and landscape character	Community	Both facilities would be obvious to visual receptors in the existing environment. The industrial nature of the area precludes any significant impact.	Reputation - Community	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industrystandard control measures	Minor	Likely	Low
1.6a	Civil works and facility activities (establishment/operation/decommissioning)	Dust emissions reducing nearby air quality	Air and Dust	Vehicle movements and laydown activities in 6, Grand Avenue could result in the emission of dust due to the unsealed nature of the site. If required, the grassed area of 8 Colquhoun Street will be covered with hard-stand to increase its capacity. The change to hard stand will ensure the potential for dust emissions will be reduced. There are no sensitive receivers near to either facility that could be impacted.	Reputation - Community	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Likely	Low

Risk Ref#	Environmental Aspect*	Impact **	Environmental Impact Category	Site Specific Risk Description ***	Risk category	Project specific Location(s)	Existing Standard Controls and Assumptions			
1.7a	Civil works and facility activities (establishment/)	Heritage impacts	Heritage	N/a –Remediation Works already underway have involved heavy earthworks, and have resulted in the discovery, and salvage of disturbed the heritage, prior to the Stage 2 Remedial Works commencing, precluding its relevance here.		6 Grand Avenue	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Negligible	Likely	Low
1.7c	Civil works and facility activities (establishment/)	Heritage impacts	Heritage	N/a - no ground intrusive works would be required at this facility. There are no known heritage features nearby.		8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Negligible	Likely	Low
1.8a	Civil works and facility activities (establishment)	Noise impacts to sensitive receivers	Noise and Vibration	Noise emissions would be limited to vehicle movements and minor civil works. No high level noise emissions would occur from either facility. There are no sensitive receivers within 0.5km of either facility	Environment - Environment Effects / Cultural Heritage	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Likely	Low
1.9a	Accidental release of hazardous and non-hazardous materials/wastes	Contamination of the physical environment (water quality and land)	Land and Water Contamination	Hazardous materials and waste will be stored within appropriately designed storage systems. The unsealed nature of the facility could result in localised land contamination. The erosion sediment control fence and water treatment system would prevent a spill from impacting local water quality.	Environment - Environment Effects / Cultural Heritage	6 Grand Avenue	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Unlikely	Low
1.9b	Accidental release of hazardous and non- hazardous materials/wastes	Contamination of the physical environment (water quality and land)	Land and Water Contamination	N/a - no materials or wastes would be stored in this facility	Environment - Environment Effects / Cultural Heritage	8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Negligible	Likely	Low
1.10a	Light emissions during night-time activities	Social impacts - disturbance of nearby receivers	Community	Both facilities will be operational 24hrs a day, therefore will require lighting. The absence of sensitive receivers near to the facilities would preclude an impact.	Reputation - Community	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Likely	Low
1.11a	Vegetation clearance	Loss of biodiversity of value	Flora and Fauna	The grass located in this site, will be covered with hardstand material, if required to increase the capacity of the facility. This would be limited to species-poor grass/lawn that is considered of limited biodiversity value. The trees would be retained.	Environment - Environment Effects / Cultural Heritage	8 Colquhoun Street	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Minor	Likely	Low

Environmen	tal Diel	r Idontifica	tion

Risk analysis and evaluation**** using existing standard controls and assumptions

Risk Ref#	Environmental Aspect*	Impact **	Environmental Impact Category	Site Specific Risk Description ***	Risk category	Project specific Location(s)	Existing Standard Controls and Assumptions			
1.11b	Vegetation clearance	Loss of biodiversity of value	Flora and Fauna	N/a - the facility site will be provided to GRCLR cleared of vegetation by the remediation contractor.	Environment - Environment Effects / Cultural Heritage	6 Grand Avenue	Relevant control measures provided in Section 7 of this Plan and ECMs/TCPs in Appendix A and industry- standard control measures	Negligible	Likely	Low
1.12	Damage to capping layer (at either site)	Exposure to contaminated material	Workforce	This risk is applicable to both sites, as both have containment cells and capping layers. No excavation works are proposed as part of the site establishment, operation of the compounds or demobilisation of the sites.	Environment – Impact to workers	6 Grand Avenue & 8 Colquhoun Street	Relevant control measures in the case of interaction with contamination are included in the respective LTEMP for each site.	Major	Unlikely	Low

^{*} An Environmental Aspect is an element of the organisations activities or products or services that can interact with the environment. (AS/NZS ISO14001:2004)

** An Environmental Impact is defined as any change to the environment or a component of the environment, whether adverse or beneficial, wholly or partially resulting from an organisations environmental aspects.(AS/NZS ISO14001:2004)

*** Risk description. This is the articulation of the resultant risk given the aspect and impact at the site.

**** Risk consequence and likelihood as defined by TfNSW Project Risk Management – 3TP-PR-086 (provided below)

Risk consequence as defined by TfNSW Project Risk Management – 3TP-PR-086

	Potential Consequence									
Rating	Safety & Health	Environment & Heritage	Financial Impact*	Human Resources / Industrial Relations	Reputation, Community and Media	Legal & Regulatory	Business Interruption			
Substantial 5	Fatal Incident (Class 1)	Permanent widespread damage (Class 1)	Impact greater than 7% annual profit / EBITDA	Consequences of an event materially affect Ventia Group.	Sustained national negative media coverage. Loss of long term key client	Major litigation by regulatory body. Possibility of custodial sentence.	Delay / Business interruption > 5 days or as relevant**			
Major 4	Permanent Injury (Class 1) Damage, which permanently alters a person's future (e.g. quadriplegia, paraplegia, amputation of a limb)	Major but recoverable damage (Class 1)	Impact between 4% and 7% annual profit / EBITDA	Consequences of an event affect more than one division / business unit within the Ventia Group	Regional/short negative media coverage. Loss of Client/Project	Major breach of regulation with punitive fine, significant litigation involving many weeks of senior management time	Delay / Business interruption between, 3-5 days or as relevant**			
Moderate 3	Lost Time Injury or Restricted Work Case (Class 2) Damage, which temporarily alters a person's future	Moderate, medium term but recoverable damage (Class 2)	Impact between 2% and 4% annual profit / EBITDA	Consequences of an event affect more than 1 line of business within a business unit / division	Local negative media coverage. Site or project problem.	Breach of regulation with investigation or report to authority with prosecution and/or moderate fine possible	Delay / Business interruption between, 1-3 days or as relevant**			
Minor 2	Medical Treatment (Class 2) Damage, which temporarily inconveniences a person	Minor, short term and onsite damage (Class 3	Impact between 0.5% and 2% annual profit / EBITDA	Consequences of an event are restricted within a single line of business within a business unit / division	Public concern restricted to local complaints	Minor legal issues, non- compliances and breaches of regulation.	Delay / Business interruption up to 1 day or as relevant**			
Negligible 1	First Aid Treatment (Class 3) Actual injury which requires no treatment or simple first aid	Negligible damage (Class 3)	Impact less than 0.5% annual profit / EBITDA	Consequences of an event are restricted to the project where the concern arose	Single stakeholder concern.	Minor technical breach of regulation	Negligible business interruption			

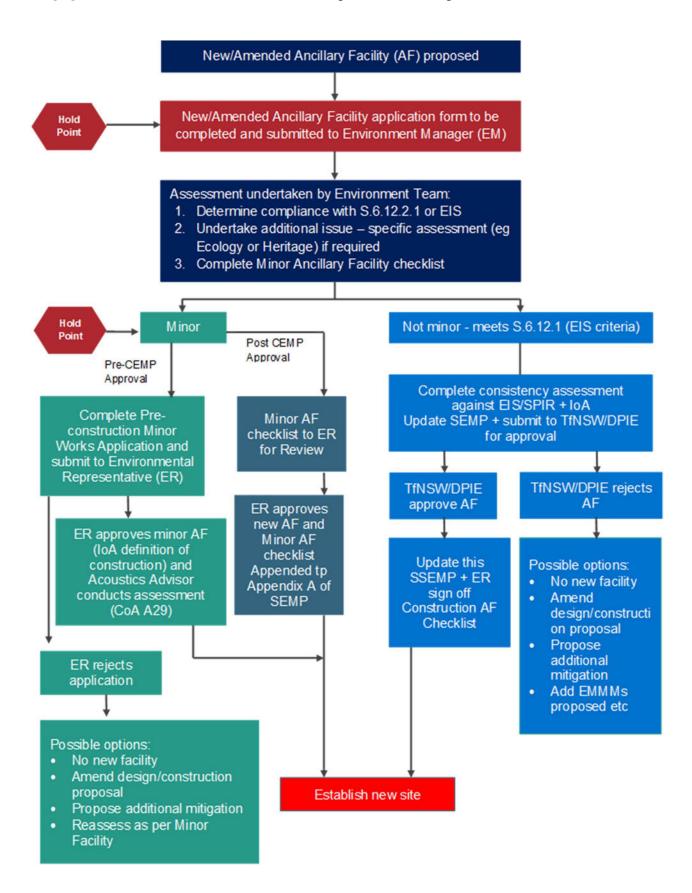

Risk likelihood as defined by TfNSW Project Risk Management – 3TP-PR-086

	Likelihood Criteria									
Rating	Probability or chance of occurring in the next year	For safety, health and environment purposes								
Almost Certain 5	≥75%	Very confident the risk or opportunity will materialise. A small but significant chance it may not however. Not yet 100% certain.	Common / Frequent occurrence when performing this task							
Likely 4	50% to 75%	Better than even chance of occurring. Current perception is that it is more likely than not to occur	Is known to occur or "it has happened regularly" when performing this task							
Possible 3	25% to 50%	Becoming an almost even chance of occurring. Too much uncertainty at present however to judge the risk as being likely to occur	Could occur when performing this task							
Unlikely 2	5% t0 25%	Not yet confident the risk or opportunity will materialise. Much more confident it won't occur	Unlikely to occur when performing this task							

	CONSEQUENCE CRITERIA								
4	RATING	1 - Negligible	2 - Minor	3 - Moderate	4 - Major	5 - Substantial			
ITERI	Almost Certain	Low 5	Moderate 10	Very High 18	Extreme 23	Extreme 25			
D CR	Likely	Low 4	Moderate 9	Very High 17	Very High 20	Extreme 24			
IHO0	Possible	Low 3	Moderate 8	High 13	Very High 19	Very High 22			
LIKE	Unlikely Low 2	Low 7	High 12	High 15	Very High 21				
	Rare	Low 1	Low 6	Moderate 11	High 14	High 16			

Risk Ranking	Response Obligations
EXTREME (Risk Level 23-25)	A major control weakness or issue that exposes the organisation to a Extreme level of risk. The issue is raised with management (general manager or above) upon interim recommendations and immediate mitigation is required, even if shutdown of operations are the only remedies. This compulsory immediate mitigation can only be lifted by the Executive General Manager when fully briefed on the risks associated with continuing with the existing operations. ESCALATION TO GENERAL MANAGER LEVEL FOR SIGN OFF ON THIS RISK.
VERY HIGH (Risk Level 17-22)	A control weakness or an issue that exposes the organisation to a major level of risk. Mitigation measures for this risk are required to be implemented, even if disruption to the normal operational process is the only remedy. This mitigation can only be lifted by Project Manager level or above and sign off on acceptance of this risk. ESCALATION TO PROJECT MANAGER/DIRECTOR OR DELGATE FOR SIGN OFF ON THIS RISK.
HIGH (Risk Level 12-16)	A control weakness or an issue that exposes the organisation to a moderate level of risk. Mitigation measures for this risk are required to be implemented. This mitigation can only be lifted by Line Manager level or above and sign off on acceptance of this risk. ESCALATION TO LINE MANAGER FOR SIGN OFF ON THIS RISK.
MODERATE (Risk Level 8-11)	A control weakness or an issue that exposes the organisation to a minor risk. Requires mitigation measures and supervisor resolution. ESCALATION TO SUPERVISOR FOR SIGN OFF ON THIS RISK.
LOW (Risk Level 1-7)	An issue that represents a negligible risk resolution of which will improve the organisation's control. Expected improvement within local monitoring framework at area or location level. SUPERVISOR TO SIGN OFF ON ALL RISK MANAGEMENT TOOLS EXCEPTING EXCEPT PERSONAL RISK ASSESSMENT TOOLS.

Appendix C – Ancillary Facility Flow Chart

Appendix D – Minor Ancillary Facility Checklist Template

Minor ancillary facility checklist

[site name]

1. Criteria for minor ancillary facilities

Chapter 6 of the Site Establishment Management Plan (SEMP) outlines the procedure for the approval of construction compound and ancillary facilities.

As outlined in the procedure, this minor ancillary facility checklist is to be used for minor construction related ancillary facilities including minor site sheds, lunch sheds and portable toilets or other ancillary facilities determined by the ER to have a minor environmental impact. These facilities will be located in accordance with the criteria listed in Table 1 and submitted to the [Transport for NSW/ ER/AA] Environment Manager for approval prior to installation. Once approved they will be included on the register contained in Attachment A.

Table 1: Criteria for n	ninor ancillary	facilities
-------------------------	-----------------	------------

Site Name	
Precinct	
Chainage / Address	

Criteria	Compliant (Yes / No)	Comments
Located within an active construction zone within the approved project boundary.		
Have minimal amenity impacts to surrounding residences, with consideration to matters such as noise and vibration impacts, traffic and access impacts, dust and odour impacts, and visual (including light spill) impacts.		
Have minimal impact in respect to waste management, and no impacts on flora and fauna, soil and water, and heritage beyond those approved for the project.		
Have environmental and amenity impacts that can be managed through the implementation of environmental measures been detailed in the construction environmental management Plan for the project.		

A locational map including site layout and environmental constraints is attached in Attachment A.

[site name]

2. Mitigation measures

Table 2: Site specific mitigation measures additional to the CEMP

	Measure/ Requirement	Responsibility	Timing / frequency	Reference
INSERT	TOPIC			
	Insert mitigation measure			

3. Certification

This minor ancillary facility checklist provides a true and fair review of the proposed activity for Parramatta Light Rail project.

The noise and vibration impacts for this Project has been assessed by the AA in accordance with A29.

Appendix E – Completed Minor Ancillary Facility Checklists

Minor ancillary facility checklist – 8 Colquhoun Street

[8 Colquhoun Street]

1. Criteria for minor ancillary facilities

Chapter 6 of the Site Establishment Management Plan (SEMP) outlines the procedure for the approval of construction compound and ancillary facilities.

As outlined in the procedure, this minor ancillary facility checklist is to be used for minor construction related ancillary facilities including minor site sheds, lunch sheds and portable toilets or other ancillary facilities determined by the ER to have a minor environmental impact. These facilities will be located in accordance with the criteria listed in Table 1 and submitted to the Transport for NSW/ ER/AA Environment Manager for approval prior to installation. Once approved they will be included on the register contained in Attachment A.

Table 1: Criteria for minor ancillary facilities

8 Colquhoun Street
Rosehill
8 Colquhoun Street

Criteria	Compliant (Yes / No)	Comments
Located within an active construction zone within the approved project boundary.	N	The facility is located adjacent to the construction zone.
Have minimal amenity impacts to surrounding residences, with consideration to matters	Y	The purpose of this facility is for use as a light vehicle carpark to support the works and compound at the SaMF site at 6 Grand Avenue.
such as noise and vibration impacts, traffic and access impacts, dust and odour impacts, and visual (including light spill) impacts.		It will continue to be used as a light vehicle car park for staff and workforce throughout the construction of the Project.
		Noise and vibration – Noise emissions would be limited to vehicle movements and minor civil works. No high-level noise emissions would occur. There are no sensitive receivers within 0.5km of this facility.
		Traffic and access – The facility will be used for parking of up to 300 light vehicles. The inclusion of this site will remove those 300 light vehicles (used by staff and workforce during construction) from the street parking in the area. The facility will be access via high-volume roads, therefore congestion is not expected. There are no pedestrian pathways or adjacent properties that could be affected by vehicles accessing the facility.

Criteria	Compliant (Yes / No)	Comments
		Dust and odour – Clearance of the grassed area of 8 Colquhoun Street to increase its capacity could result in dust emissions. Once sealed with bitumen, the potential for dust emissions will be reduced. There are no sensitive receivers near to the facility that could be impacted.
		The facility would only be used as a carpark and therefore would not involve any activities that generate odours.
		Visual – The facility would be obvious to visual receptors in the existing environment. The industrial nature of the area precludes any significant impact.
		The site is currently a disused carpark owned by an adjoining neighbour. The proposed use of this site as an ancillary facility is purely for use as a carpark, and therefore the anticipated impacts are no different to those of the existing use of the site.
Have minimal impact in respect to waste management, and no	Υ	Waste – The facility will not generate waste as its sole purpose is to be used as a carpark for staff and workforce during construction.
impacts on flora and fauna, soil and water, and heritage beyond those approved for the project.		Flora and fauna – Any existing trees and shrubs will be retained. There is some species-poor lawn in the centre of the site that may be covered with road base, should additional parking be required. The lawn is of no ecological significance.
		Soil and water – The facility will have no unsealed land or involve the storage of hazardous substances. The site already drains to the existing stormwater and drainage network in the area and the proposed use of the site will not result in any change to the interaction of the site with the drainage network. The placement of road base over the lawn in the centre of the site will ensure the permeability of the site and runoff generated during rain events remains unchanged
		Heritage – No ground intrusive works would be required at this facility. There are no known heritage features nearby.
		The site is currently a disused carpark owned by an adjoining neighbour. The proposed use of this site as an ancillary facility is purely for use as a carpark, and therefore the anticipated impacts are no different to those of the existing use of the site.
		Note that no works undertaken by GRCLR in establishing the site would require excavation

Criteria	Compliant (Yes / No)	Comments
		works that could expose contaminated materials.
Have environmental and amenity impacts that can be managed through the implementation of environmental measures been detailed in the construction environmental management Plan for the project.	N	The CEMP is not relevant to the establishment of this site. The CEMP is being developed and will be approved prior to commencement of construction and operation of this site. This SEMP is for the site establishment activities for this site only, and the mitigation measures relevant to the facility are included in section 2.

A locational map including site layout and environmental constraints is attached in Attachment A.

2. Mitigation measures

Table 2: Site specific mitigation measures additional to the CEMP

	Measure/ Requirement	Timing / frequency	Responsibility	Reference
General				
SEM10	Decommissioning of facilities would return the site to their pre-establishment condition, or better	Decommissioning	Facility Manager	GEN-2
SEM16	General site housekeeping will form part of compulsory site inductions for all personnel.	Establishment / construction / decommissioning	Facility Manager	WM-2
Visual				
SEM2	Boundary fencing with screening is to be established around ancillary facilities prior to establishment and for the duration of construction unless otherwise agreed with councils, affected residents or business operators/landowners during consultation. Fencing and screens will be regularly inspected during site inspections and repaired/cleaned when required.	Pre-establishment	Facility Manager	C19/C20 AQ-1 VL-16

	Measure/ Requirement	Timing / frequency	Responsibility	Reference
SEM32	The facility lighting strategy would be designed to minimise glare and light spill on adjacent properties	Construction	Facility Manager	VL-16
Flora a	nd fauna			
SEM5	Minimise the clearing of vegetation, particularly high retention trees.	Pre-establishment	Facility Manager	GEN-2 TR-9
Air quali	ty			
	Dust emissions would be monitored visually by facility staff. The occurrence of dust emissions would trigger dust suppression strategies.	Establishment / construction / decommissioning	Facility Manager	HY-6 WM-2
SEM26	Activities which may result in the generation of off-site dust impacts would avoid adversely windy conditions	Construction	Facility Manager	
Soil and	Water			
	There will no digging or excavation at this facility therefore no risk in exposure of potential contaminated soil and groundwater.	Establishment / construction / decommissioning	Facility Manager	
	Environmental Control Map for the site will be prepared including erosion and sediment controls.	Establishment / construction / decommissioning	Facility Manager	BI-3

3. Certification

This minor ancillary facility checklist provides a true and fair review of the proposed activity for Parramatta Light Rail project.

Appendix F – Construction Ancillary Facility Checklist Template

Construction ancillary facility checklist template

[facility name]

1. Introduction

Chapter 4 of the Site Establishment Management Plan (SEMP) outlines the process for the approval of construction compounds and ancillary facilities.

As outlined in the process, this ancillary facility checklist is to be used for construction compounds and ancillary facilities that were identified in the Submission/ Preferred Infrastructure Report (SPIR) and/or Environmental Impact Statement and comply with the approved usage, boundary layout and all applicable safeguards.

2. Conditions of approval

The CoAs relevant to this checklist are listed in Table 1. A cross reference is also included to indicate where the condition is addressed in this checklist.

Table 1: Conditions of approval relevant to the ancillary facility checklist memo

CoA No	Condition Requirements	Document Reference
C18	Before establishment of any construction ancillary facility as identified in the EIS and SPIR (and excluding minor construction ancillary facilities), the Proponent must prepare a Site Establishment Management Plan which outlines the environmental management practices and procedures to be implemented for the establishment of the construction ancillary facilities. The Site Establishment Management Plan must be prepared in consultation with the relevant council(s) and relevant government authorities. The Plan must be submitted to the Secretary for approval one (1) month before establishment of any construction ancillary facilities. The Site Establishment Management Plan must detail the management of the construction ancillary facilities and include:	
	(a) A description of activities to be undertaken during establishment of the construction ancillary facility (including scheduling and duration of works to be undertaken at the site)	
	(b) Figures illustrating the proposed operational site layout(s)	
	(c) A program for ongoing analysis of the key environmental risks arising from the site establishment activities described in subsection (a) of this condition, including an initial risk assessment undertaken before the commencement of site establishment works	

CoA No	Condition Requirements	Document Reference
	(d) Details of how the site establishment activities described in subsection (a) of this condition will be carried out to: i) meet the performance outcomes stated in the documents listed in the documents identified Condition A1, ii) to address traffic, pedestrian access and amenity around each site, and iii) manage the risks identified in the risk analysis undertaken in subsection (c) of this condition; and	
	(e) A program for monitoring the performance outcomes, including a program for construction noise monitoring consistent with the requirements of Conditions C9 and C11 .	
	Nothing in this condition prevents the Proponent from preparing individual Site Establishment Management Plans for each construction ancillary facility.	

3. Site description

(a) A description of activities to be undertaken during establishment of the construction ancillary facility (including scheduling and duration of works to be undertaken at the site).

Table 2: Site description

Item	Description
Facility number / precinct	
Chainage or address	
Location	
Lot ID	
Size	
Activities at site	Include details of the activities to be carried out at the facility, including the hours of operation, staging of operation and predicted date of commissioning.

(b) Figures illustrating the proposed operational site layout(s)

A locational map with layout and environmental constraints has been included in Appendix A of the SEMP.

4. Program for key environmental risks

(c) A program for ongoing analysis of the key environmental risks arising from the site establishment activities described in subsection (a) of this condition, including an initial risk assessment undertaken before the commencement of site establishment works

An initial environmental risk assessment has been included in Appendix A of the SEMP.

5. Environmental impacts and performance outcomes

- d) Details of how the site establishment activities described in subsection (a) of this condition will be carried out to:
- i) meet the performance outcomes stated in the documents listed in the documents identified Condition A1,
- ii) to address traffic, pedestrian access and amenity around each site, and
- iii) manage the risks identified in the risk analysis undertaken in subsection (c) of this condition

3: Potential environmental impacts

Issue	Impact

6. Monitoring

A program for monitoring the performance outcomes, including a program for construction noise monitoring consistent with the requirements of **Conditions C9** and **C11**.

7. Mitigation measures

[Add addition site specific mitigation measures to the below table]

Table 4: Site specific mitigation measures additional to the CEMP

6 Grand Avenue, Camellia

1. Introduction

Chapter 6 of the Site Establishment Management Plan (SEMP) outlines the process for the approval of construction compounds and ancillary facilities.

As outlined in the process, this ancillary facility checklist is to be used for construction compounds and ancillary facilities that were identified in the Submission/ Preferred Infrastructure Report (SPIR) and/or Environmental Impact Statement and comply with the approved usage, boundary layout and all applicable safeguards.

2. Conditions of approval

The CoAs relevant to this checklist are listed in Table 1. A cross reference is also included to indicate where the condition is addressed in this checklist.

Table 1: Conditions of approval relevant to the ancillary facility checklist memo

CoA No	Condition Requirements	Document Reference
C18	Before establishment of any construction ancillary facility as identified in the EIS and SPIR (and excluding minor construction ancillary facilities), the Proponent must prepare a Site Establishment Management Plan which outlines the environmental management practices and procedures to be implemented for the establishment of the construction ancillary facilities. The Site Establishment Management Plan must be prepared in consultation with the relevant council(s) and relevant government authorities. The Plan must be submitted to the Secretary for approval one (1) month before establishment of any construction ancillary facilities. The Site Establishment Management Plan must detail the management of the construction ancillary facilities and include:	SEMP.
	(a) A description of activities to be undertaken during establishment of the construction ancillary facility (including scheduling and duration of works to be undertaken at the site)	Section 5 of the SEMP.
	(b) Figures illustrating the proposed operational site layout(s)	Appendix A of SEMP.
	(c) A program for ongoing analysis of the key environmental risks arising from the site establishment activities described in subsection (a) of this condition, including an initial risk assessment undertaken before the commencement of site establishment works	Appendix B of SEMP. Section 7 of this checklist.

CoA No	Condition Requirements	Document Reference
	(d) Details of how the site establishment activities described in subsection (a) of this condition will be carried out to: i) meet the performance outcomes stated in the documents listed in the documents identified Condition A1, ii) to address traffic, pedestrian access and amenity around each site, and iii) manage the risks identified in the risk analysis undertaken in subsection (c) of this condition; and	Section 7 of this checklist.
	(e) A program for monitoring the performance outcomes, including a program for construction noise monitoring consistent with the requirements of Conditions C9 and C11 .	Section 6 of this checklist.
	Nothing in this condition prevents the Proponent from preparing individual Site Establishment Management Plans for each construction ancillary facility.	N/A

3. Site description

Table 2: Site description

Item	Description		
Facility number / precinct	Camellia		
Chainage or address	6 Grand Avenue		
Location	Camellia		
Lot ID	DP843591		
Size	580m ²		
Activities at site	The facility will be used for the following:		
	 Storage of equipment and materials (hazardous and non- hazardous) and plant prior to mobilisation to the construction sites. 		
	Refuelling of plant and equipment.		
	 Site facilities (offices, lunchrooms and amenities). 		
	Staff car parking.		
	The facility will operate 24 hours each day, seven days a week.		
	The facility will be established commencing when the remediation contractor has completed the required works.		

A map with layout and environmental constraints has been included in Appendix A of the SEMP. Below is a schedule of facility establishment activities:

- Install TfNSW branded shade cloth on existing perimeter chain wire fencing
- Install access/ egress gates
- Apply soil binder to the entire site

- Install erosion and sediment controls
- Install site offices and other facilities (ablutions/ lunchrooms/ storage sheds/ etc)
- Connect to services (water / power / sewer)
- Install site-wide signage, waste bins and lighting
- Set out laydown area(s) and install concrete washout area
- Install spill kits where required.

4. Program for key environmental risks

An initial environmental risk assessment has been included in Appendix B of the SEMP. All environmental impacts are considered to have a low or nil environmental risk owing to the location of the facility, its environmental setting and the activities that would take place. Monitoring of environmental performance will continue throughout the lifetime of the facility, as described in Section 6 (Table 4).

5. Environmental impacts and performance outcomes

Table 3 reviews the potential environmental impacts of the establishment and activity of the facility. Section 6 sets out the monitoring strategy that will review the facility's environmental performance. Section 7 provides a list of mitigation measures designed to minimise the environmental impact of the facility.

Table 3: Potential environmental impacts

Issue	Impact
Project vehicle movements in the public domain	Traffic, Transport and Access - Vehicle movements to and from the facilities will include both light (workers) and heavy vehicles (equipment and materials), including some long slow-moving vehicles (up to 19m). The additional volume of traffic and the type of vehicles could cause congestion to the public roads, although the facilities are all accessible from high-capacity roads.
	The facility has no pedestrian pathways or adjacent properties that could be affected by vehicles accessing the facility
	The facility has staff parking, therefore there should not be a significant impact to public parking
Project vehicle movements in the public domain	Noise and Vibration - The project vehicles will use established busy roads; therefore, it is unlikely the project vehicles will contribute significantly to the existing noise environment, which is already dominated by road noise.
Facility establishment	Visual and landscape character – The facility would be obvious to visual receptors in the existing environment. The industrial nature of the area precludes a significant impact.
Facility establishment	Air quality - Vehicle movements and laydown activities in 6 Grand Avenue could result in the emission of dust due to the unsealed nature of the site.
Civil works	Heritage - Ground remediation works would have disturbed the heritage, precluding its relevance here.

Issue	Impact
Facility establishment	Noise and vibration - Noise emissions would be limited to vehicle movements and minor civil works. No high-level noise emissions would occur.
	There are no sensitive receivers within 0.5km of the facility
Accidental release of hazardous and non-hazardous materials/wastes	Land Contamination - Hazardous materials and waste will be stored within appropriately designed storage systems, which meet the required Australian Standards. All refuelling will be undertaken in designated areas, which are appropriately bunded, and which will be supplied with spill kits. The site will be on top of a capping layer which forms part of the Stage 2 Remediation Works for the site, which are currently being completed by the remediation contractor and which will be complete prior to the handover of the site to GRCLR. The capping layer will prevent penetration of any spilled contaminants. The erosion sediment control fence and water treatment system would prevent a spill from impacting local water quality.
Accidental damage to capping layer.	The facility will be established on top of the 400mm clean fill layer, which is to be installed on top of the remediation capping layer.
	No excavation works will be undertaken as part of the establishment, operation, or demobilisation of the facility.
Light emissions during night- time activities	Community – The facility will be operational 24hrs a day, therefore will require lighting. The location of the site within an industrial precinct, which has other occupants operating 24hrs a day, means the establishment of the site will be in keeping with the surrounding land uses.
	There are no sensitive receivers near to the facility, with the closest being over 0.5kms away.
Vegetation clearance	Flora and Fauna - The facility site will be provided to GRCLR cleared of vegetation. All vegetation clearing will be undertaken by the remediation contractor prior to GRCLR taking possession.

6. Monitoring

Table 4 provides a list of monitoring activities that will be undertaken to analyse the environmental performance of the facility.

Table 4: Monitoring requirements

Subject of monitoring method of monitoring	Location of monitoring	Frequency of monitoring	Responsibility
Condition of boundary fence and hoarding - visual	Site perimeter	Weekly	Facility Manager
Efficacy of erosion sediment control - visual	Site perimeter	Weekly	Facility Manager
Site housekeeping, including contamination and escape of wastes and materials - visual	Site wide	Weekly	Project Environment and Sustainability Manager

Subject of monitoring method of monitoring	Location of monitoring	Frequency of monitoring	Responsibility
Dust emissions - visual	Site wide	Daily	Project Environment and Sustainability Manager
Clean public roads - visual	Exit of facility	Daily	Facility Manager
Noise emissions from vehicles and equipment - equipment	All site vehicles and equipment	Monthly	Facility Manager
Site speed limit - equipment	Site wide	Periodically	Facility Manager
Weather – online forecast	Site wide	Daily	Project Environment and Sustainability Manager
Glare/light spill - visual	Site wide	Monthly	Facility Manager
Idling equipment - visual	Site wide	Weekly	Project Environment and Sustainability Manager

7. Mitigation measures

Table 5 sets out the mitigation measures that will be applied at the facility.

Table 5: Site specific mitigation measures

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference
SEM2	Boundary fencing with screening is to be established around ancillary facilities prior to establishment and for the duration of construction unless otherwise agreed with councils, affected residents or business operators/landowners during consultation. Fencing and screens will be regularly inspected during site inspections and repaired/cleaned when required.	Boundary fencing and screens	Pre-establishment	Facility Manager	C19/C20 AQ-1 VL-16
	Natural screens created by vegetation would be retained where possible.				
SEM4	Manage stockpile areas to minimise potential pollution of watercourses, groundwater and local air quality.	Appropriately designed stockpile areas and dust suppression systems	Construction	Facility Manager	GEN-2 AQ-1
SEM10	Decommissioning of facilities would return the site to their pre-establishment condition, or better		Decommissioning	Facility Manager	GEN-2
SEM11	Environmental control maps would be prepared for each facility in accordance with TfNSW's Guide to Environmental Control Maps.	Environmental control map	Pre-establishment	Project Environment and Sustainability Manager	GEN-2 BI-3 AQ-1

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference
					HR-5 PR-5 NV-2
SEM13	Erosion sediment control measures would be implemented in accordance with Landcom's (2004) Managing Urban Stormwater: Soils and Construction and Construction Volume 2 (DECC, 2008)	Erosion sediment control measures	Establishment	Facility Manager	HY-6 EPO-SG-1
SEM14	Waste would be classified according to EPA's Waste Classification Guidelines (2016) and appropriately managed in accordance with its classification.		Establishment / construction / decommissioning	Facility Manager	HY-6 WM-2
SEM15	Waste would be managed through the waste hierarchy established under the <i>Waste Avoidance and Resource</i> Recovery Act 2001 management hierarchy		Establishment / construction / decommissioning	Facility Manager	WM-2
SEM16	General site housekeeping will form part of compulsory site inductions for all personnel.		Establishment / construction / decommissioning	Facility Manager	WM-2
SEM17	Stockpile sites would, where feasible and reasonable, be located away from any surface runoff flow paths and above the 10% AEP flood levels.		Construction	Facility Manager	HY-8
SEM18	Dust emissions would be monitored visually by facility staff. The occurrence of dust emissions would trigger dust suppression strategies.	Water cart/other dust suppression methods	Establishment / construction / decommissioning	Project Environment and Sustainability Manager	AQ-1

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference
SEM19	Wheel-wash or rumble grid facilities would be located at the exit of each facility where the vehicles traverse unsealed ground prior to exiting	Wheel-wash or rumble grid facilities	Construction	Project Environment and Sustainability Manager	AQ-1
SEM20	Loose material and debris would be removed from the tailgate of vehicles unloading materials to stockpiles prior to departure from site.	Brushes	Construction	Facility Manager	AQ-1
SEM21	All vehicles and equipment will be maintained and serviced to operate efficiently. All on-road trucks would comply with the relevant Australian emission standards Compliance checks for noise emissions from vehicles and equipment would be carried out		Establishment / construction / decommissioning	Facility Manager	AQ-1 NV-2
SEM22	All loads will be covered when travelling offsite		Establishment / construction / decommissioning	Facility Manager	AQ-1
SEM23	Unsealed ground will be treated with a binder to minimise dust emissions		Establishment / construction /	Facility Manager	AQ-1
SEM24	Speed limits will be imposed to limit the generation of dust from vehicle movements	Speed limit signs	Establishment / construction /	Facility Manager	AQ-1
SEM25	Dust monitoring devices would be installed if dust emissions become a significant issue	Dust monitoring devices	Construction	Facility Manager	AQ-1
SEM26	Activities which may result in the generation of off-site dust impacts would avoid adversely windy conditions		Construction	Facility Manager	AQ-1

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference
SEM27	All chemicals and fuels would be stored in sealed containers as per appropriate regulations and guidelines.	Storage systems	Construction	Facility Manager	AQ-1
SEM28	Stockpiles would be covered with an appropriate material if left undisturbed for a long period		Construction	Facility Manager	AQ-1
SEM29	Hazardous materials and wastes would be stored in appropriately designed storage facilities, in accordance with Australian Standards and DECCW guidelines	Storage systems	Pre-establishment / construction	Facility Manager	HR-5
SEM31	Chemical spill kits would be readily available and accessible to facility workers. Kits would be kept across the facility and on specific construction vehicles, and all hazardous materials spills and leaks would be reported to site managers and actions would be immediately taken to remedy spills and leaks. Employees would be trained in the correct use of spill kits.	Spill kits	Construction	Facility Manager	HR-5
SEM32	The facility lighting strategy would be designed to minimise glare and light spill on adjacent properties	Lighting	Construction	Facility Manager	VL-16
SEM37	When relevant and possible, simultaneous operation of noisy plant in close proximity to sensitive receptors would be avoided (where possible).		Construction	Facility Manager	NV-2
SEM38	Equipment which is used intermittently would be shut down when not in use.		Construction	Facility Manager	NV-2
SEM42	Where possible heavy vehicle movements would be limited to daytime hours.		Construction	Facility Manager	NV-2

ID	Measure/Requirement	Resources needed	When to implement	Responsibility	Reference
SEM43	Reversing of equipment would be minimised so as to prevent nuisance caused by reversing alarms, which would be limited to the use of non-tonal reversing alarms.		Construction	Facility Manager	NV-2
SEM46	The project would be carried out in accordance with the Parramatta Light Rail Sustainability Strategy.		Pre-establishment / construction / decommissioning	Project Environment and Sustainability Manager	EPO-SU-1
SEM47	The project would comply with the relevant requirements of the NSW Government Resource Efficiency Policy.		Pre-establishment / construction / decommissioning	Project Environment and Sustainability Manager	EPO-SU-2
SEM48	The scheduling of road deliveries across the Project would be managed to make sure that road congestion is minimised. Scheduling would consider special events and other factors that could influence the volume of traffic on the road.		Pre-establishment / construction / decommissioning	Facility Manager	EPO-TT- 1/3
SEM49	Gate keepers will meet arriving deliveries and make sure pedestrians and cyclists are kept clear of turning vehicles.	Gate keeper	Pre-establishment / construction / decommissioning	Facility Manager	EPO-TT-2

8. Certification

This construction ancillary facility checklist provides a true and fair review of the proposed activity for Parramatta Light Rail project.

The noise and vibration impacts for this Project has been assessed by the AA in accordance with A29.

Appendix H – Consistency with EIS, SPIR and Infrastructure Approval

The EIS for Parramatta Light Rail did not identify the ancillary facilities the subject of this SEMP, being:

- 6 Grand Avenue, Camellia
- 8 Colquhoun Street, Rosehill.

Tables provide a summary discussion of the assessment of the proposed facilities against the criteria for consistency, and the criteria set out in the EIS for new sites.

A Consistency Assessment in the TfNSW standard template will be submitted to TfNSW, containing further detail, for review and approval separate and apart from this SEMP..

Table G-1: Assessment of the new proposed ancillary facilities - 6 Grand Avenue, Camellia

Assessment criteria	roposed ancillary facilities – 6 Grand Avenue, Camellia Assessment
Works comply with all relevant mitigation measures as outlined in the CEMP as required under the conditions of the approval.	The CEMP for the SaMF area of the PLR Project has been approved by DPIE. All relevant mitigation measures both from the CoA/REMMMs/EPOs and considering best industry practises will be applied. Section 7 displays the measures that will be implemented across the ancillary facilities. Site specific measures are displayed in the respective facility checklists.
Does not increase daytime or night time maximum noise levels or average noise predictions identified within the Environmental Impact Statement.	Although 6 Grand Avenue was not considered in the EIS, the noise and vibration impact assessment assessed piling, concrete works and steel erection at the SaMF site. The assessment concluded there would be only 2 receivers that would experience a minor impact from piling works as a result of exceedance of the NML (Table 40 –Technical Paper 13). The activities of the facilities (vehicle and equipment movements) would be unlikely to emit noise levels as high as the assessed activities, further reducing the potential for an exceedance of the NML and an impact to receivers.
Not require native vegetation clearing beyond that already required for the project.	The facility is located within the future SaMF site. The clearance of all vegetation within the site was considered in the EIS. All clearing has already been undertaken by the Remediation Contractor prior to commencement of SOM site establishment works.
Not have any more than a minor impact on heritage items beyond those already required for the project.	Ground remediation works has already disturbed the heritage, and salvaged items found. Therefore this is not relevant for the establishment and operation of the facility
Not unreasonably affect the land use of adjacent properties.	The facilities are located within a commercial/industrial area. The facilities' activities are synonymous with activities of adjacent properties (i.e. truck movements, equipment noise) therefore the land use of adjacent properties would not be unreasonably affected by the facilities.

Table G-2: Assessment of the new proposed ancillary facilities – 8 Colquhoun Street, Rosehill

Assessment criteria	Assessment
Works comply with all relevant mitigation measures as outlined in the CEMP as required under the conditions of the approval.	The CEMP for the SaMF area of the PLR Project has been approved by DPIE. All relevant mitigation measures both from the CoA/REMMMs/EPOs and considering best industry practises will be applied. Section 7 displays the measures that will be implemented across the ancillary facilities. Site specific measures are displayed in the respective facility checklists.
Does not increase daytime or night time maximum noise levels or average noise predictions identified within the Environmental Impact Statement.	Although 8 Colquhoun was not considered in the EIS, the noise and vibration impact assessment assessed piling, concrete works and steel erection at the SaMF site. The assessment concluded there would be only 2 receivers that would experience a minor impact from piling works as a result of exceedance of the NML (Table 40 –Technical Paper 13). The activities of the facilities (vehicle and equipment movements) would be unlikely to emits noise levels as high as the assessed activities, further reducing the potential for an exceedance of the NML and an impact to receivers.
Not require native vegetation clearing beyond that already required for the project.	The use of the facility would require the clearance of approximately 0.2ha of grassland within an otherwise developed area of land. This was not considered in the EIS
Not have any more than a minor impact on heritage items beyond those already required for the project.	No ground intrusive works would be required at this facility. There are no known heritage features nearby.
Not unreasonably affect the land use of adjacent properties.	The facilities are located within a commercial/industrial area. The facilities' activities are synonymous with activities of adjacent properties (i.e. truck movements, equipment noise) therefore the land use of adjacent properties would not be unreasonably affected by the facilities.

Acronyms and Abbreviations

Name	Description	
AMMM	Additional Mitigation Measures Matrix	
BOM	Bureau of Meteorology	
dBA	dBA denotes a single number sound pressure level that includes a frequency weighting ("A-weighting") to reflect the subjective loudness of the sound level. The frequency of a sound affects its perceived loudness. Human hearing is less sensitive at low and very high frequencies, and so the A-weighting is used to account for this effect. An A-weighted decibel level is written as dBA.	
CNVMP	Construction Noise and Vibration Management Plan

EPA	Environment Protection Authority	
ICNG	Interim Construction Noise Guideline	
IP	Transport for NSW's Infrastructure & Place Division	
L ₁₀	The noise level exceeded for 10 per cent of the time and is approximately the average of the maximum noise levels.	
L ₉₀	The noise level exceeded for 90 per cent of the time and is approximately the average of the minimum noise levels. The L ₉₀ level is often referred to as the "background" noise level and is commonly used as a basis for determining noise criteria for assessment purposes.	
L _{eq}	The 'equivalent continuous sound level', L _{eq} , is used to describe the level of a time-varying sound or vibration measurement. L _{eq} is often used as the "average" level for a measurement where the level is fluctuating over time. Mathematically, it is the energy-average level over a period of time (i.e. the constant sound level that contains the equivalent sound energy as the measured level). When the dBA weighting is applied, the level is denoted dB L _{Aeq} .

12 March 2021

EXECUTIVE SUMMARY

Environmental Resources Management Australia Pty Ltd (ERM) was engaged by Laing O'Rourke Australia Construction Pty Ltd (LORAC) to conduct a Construction Noise and Vibration Impact Statement (CNVIS) for Parramatta Light Rail (PLR) works associated with the establishment of the Stabling and Maintenance (SAM) Facility (the Project) located in Camellia, New South Wales (NSW).

This report has been prepared to document the methodology, results, findings and recommendations of the Project's CNVIS. This CNVIS document is a requirement of:

- The Minister's Conditions of Approval (CoA), specifically CoA E42.
- The 'Revised Environmental Mitigation and Management Measures' (REMMM) listed in the Parramatta Light Rail (Stage 1) – Westmead to Carlingford via Parramatta CBD and Camellia Environmental Impact Statement, dated August 2017 (the EIS).
- The Submissions Report submitted subsequent to the EIS exhibition, incorporating the Preferred Infrastructure Report (TfNSW, 2018) and all applicable legislation.

Assessment Overview

The CNVIS has been conducted with due regard to and in accordance with the following NSW policy and guidelines relevant to noise:

- NSW Department of Environment and Climate Change NSW Interim Construction Noise Guideline (ICNG), July 2009.
- NSW Government Transport for NSW (TfNSW) Construction Noise and Vibration Strategy (ST-157/4.1) (CNVS), April 2019.
- NSW Environment Protection Authority NSW Noise Policy for Industry (NPI), October 2017 and relevant application notes.
- NSW Department of Environment, Climate Change and Water NSW Road Noise Policy (RNP), March 2011.

This CNVIS considers the following acoustical factors: air-borne construction noise; road traffic noise during construction; and ground-borne construction vibration. Due to the large intervening distances between the Project and the nearest residences, ground-borne noise impacts are deemed to be negligible and are therefore not assessed in this CNVIS. Blasting activities are not required for the Project and are therefore also not addressed in this CNVIS.

The CNVIS report is technical in nature, a glossary of relevant acoustical concepts and terminology is provided in **Appendix A** of this report.

Summary of Results

Six hundred and fifty (650) representative receptors locations have been identified to be the closest and/or potentially most affected locations situated within the potential area of influence of SAM Facility works. These locations do not represent all receptors located in the vicinity of the Project works but have been selected for the purposes of this CNVIS; they are considered to be representative of locations that will experience the highest impacts associated with the Project.

Following the qualitative assessment of less significant acoustical factors e.g. ground-borne noise or blasting, LAeq, 15 minute construction noise levels were predicted and compared to criteria to establish compliance, evaluate potential impacts and develop potential mitigation and management measures where necessary to reduce levels and minimise impacts.

The assessment of construction noise (incl. road traffic) is presented in **Chapter 5** of this report. The assessment of construction vibration is presented in **Chapter 6** of this report. The full set of noise modelling results and findings are presented in **Appendix C**.

Page vii

Assessment Outcomes

The CNVIS identified that construction noise and vibration levels have the potential to exceed the applicable criteria, limits and thresholds. Therefore, noise and vibration reducing mitigation, management measures, safeguards and/or provisions for monitoring were established for the proposed construction as outlined in **Chapter 7** of this report.

Although noise levels exceeding criteria have been identified, these are associated with predicted 15 minute values calculated via modelling for the purposes of this assessment, in accordance with the ICNG and the CNVS requirements. They do not represent a constant noise emission that would be experienced by the community on a daily basis throughout the duration of the Project. The predicted levels are however as expected for the works proposed and are comparable to other similar projects already under construction in NSW.

Where the predicted construction noise levels are above the ICNG noise management levels, the Additional Mitigation Measures Matrix (AMMM) identified in Section 8 of the CNVS are to be implemented. The approach, guided by the AMMM, is primarily aimed at pro-active engagement with affected sensitive receptors rather than additional noise reducing mitigation. The types of additional mitigation measures include alternative accommodation, monitoring, individual briefings, letterbox drops, project-specific respite offers, phone calls and specific notifications. These vary depending on the level by which predicted noise values exceed the noise management levels, and the time of day as summarised in **Chapter 4.5** of this report.

The vibration assessment concluded that best-practice construction management and control techniques should be implemented to reduce vibration levels as far as practicable. Recommendations for mitigation and management measures in relation to ground-borne vibration were then outlined in **Chapter 7** of this report. To minimise impacts to human comfort, additional mitigation and management measures will also be warranted. These will need to be implemented in conjunction with community and stakeholder consultation and notification processes outlined in the AMMM for Ground-borne Vibration in **Section 4.5**. For vibration generating works outside the recommended standard hours for construction, letterbox drops, monitoring and a range of other additional mitigation measures from the AMMM will be required at the most affected locations during select construction activities associated with the Project.

Construction noise and vibration levels will be reduced and impacts minimised with the successful implementation of the recommendations provided in **Chapter 7** of this report. Impacts may not be reduced to negligible or fully compliant levels for all receptors during all construction activities but the recommendations presented here will ensure that any residual impacts are minimised as far as is practically achievable. These recommendations will need to be implemented in conjunction with community and stakeholder consultation and notification processes.

Prior to the commencement of works, a Construction Noise and Vibration Management Plan (CNVMP) should be prepared and implemented in accordance with the requirements of the CNVS and this CNVIS. The CNVMP should take into consideration measures for reducing the source noise levels of construction equipment by construction planning and equipment selection where reasonable and feasible. The CNVMP should outline the commitments LORAC will make on the implementation of the mitigations and management measure recommended in this CNVIS. The CNVMP may be prepared for this area of works i.e. specific to the SAM facility establishment of prepared as part of a broader PLR plan capturing all precincts and areas.

1. INTRODUCTION

Environmental Resources Management Australia Pty Ltd (ERM) was engaged by Laing O'Rourke Australia Construction Pty Ltd (LORAC) to conduct a Construction Noise and Vibration Impact Statement (CNVIS) for Parramatta Light Rail (PLR) works associated with the establishment of the Stabling and Maintenance (SAM) Facility (the Project) located in Camellia, New South Wales (NSW).

This report has been prepared to document the methodology, results, findings and recommendations of the Project's CNVIS. This CNVIS document is a requirement of:

- The Minister's Conditions of Approval (CoA), specifically CoA E42.
- The 'Revised Environmental Mitigation and Management Measures' (REMMM) listed in the Parramatta Light Rail (Stage 1) – Westmead to Carlingford via Parramatta CBD and Camellia Environmental Impact Statement, dated August 2017 (the EIS).
- The Submissions Report submitted subsequent to the EIS exhibition, incorporating the Preferred Infrastructure Report (TfNSW, 2018) and all applicable legislation.

1.1 Project Description

Parramatta Light Rail is one of the NSW Government's major public transport projects, part of a record \$89.7 billion infrastructure investment across the state. Stage 1 of Parramatta Light Rail will connect Westmead to Carlingford via the Parramatta CBD to Camellia.

As part of the Parramatta Light Rail project, LORAC will be establishing the SAM Facility including the main workshop and administration buildings (the Project) at 6 Grand Avenue, Camellia. LORAC has been engaged by Transport for NSW (TfNSW) to undertake this work.

The proposed construction activities for LORAC works at the SAM Facility involve the following:

- **General Works:** establishment/operation of site facilities, clearing and grubbing, survey and inspections, landscaping, deliveries, installation of services / fencing and internal fit-out of buildings.
- Civil Works: Excavation, structures, pads and footings construction, water plant / pipework, storm water / drainage, sewer and water mains, concrete works, structural steel erection, fill and compaction, and external building finishing (e.g. roofing, painting, sealing etc.).
- Road Works: road works (trimming, compacting), road paving and surfacing, kerbs, guttering and footpaths.
- Electrical Works: LV/Comms CSR routes and cabling, install power and lighting, earthing, bonding and switch rooms, internal electrical fit-out, and install lighting poles and pits.
- Rail System Works: install CSR routes and cabling, OHW footings construction, OHW wiring
 installation, signal installation and cabling, install points (interlocks, stops and buffers, detection
 devices etc.), track slab construction, construct turnouts and crossovers, and sleeper and rail
 installation.

1.2 Local Environment to the Project Site

Project No.: 0549455

The Project site is located at 6 Grand Avenue, Camellia in NSW. The area immediately surrounding the site consists of mostly industrial premises to the north, east and south and the Rosehill Gardens Racecourse to the west.

The nearest non-residential sensitive receptor has been identified to be the James Hardie Research & Product Development Centre (James Hardie Research Centre) which adjoins the sites southem boundary. The James Hardie Research Centre has been classified as an industrial receptor for this assessment. It is understood that it currently has scientific equipment inside the centre which could be sensitive to vibration including that generated by Project construction activities within the site.

Page 1

The nearest residential (dwelling) receptors are located to the west of the site, along James Ruse Drive. A substantial distance offset is provided with these receptors being approximately 870 to 1,000 metres from the site.

The Project site, the surrounding area and other items of importance to this assessment are presented in Figure 1-1 to Figure 1-3 below.

Minister for Planning's Condition of Approval E42 1.3

Table 1-1 provides a reference as to where in the CNVIS the requirements of the CoA – E42 have been addressed. These CoA have guided the preparation of this CNVIS as well at the EIS REMMM and TfNSW, 2018 submission report.

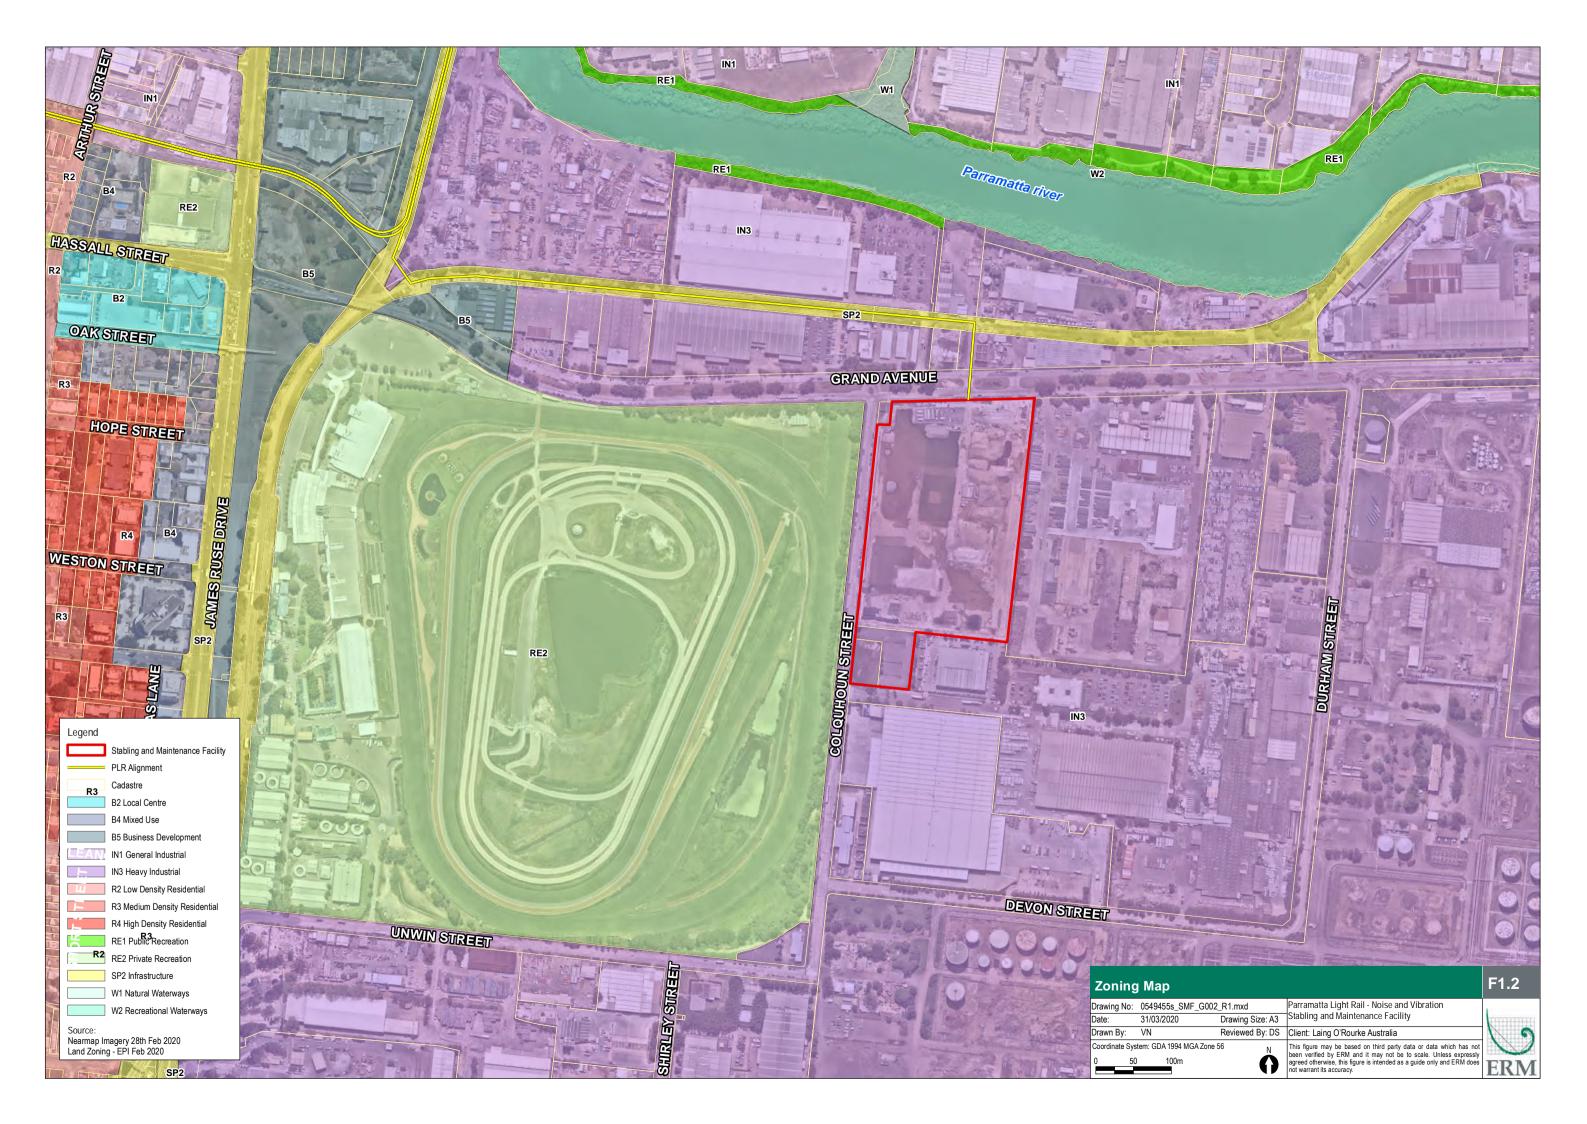

CoA - E42 Compliance Relevant to this CNVIS Table 1-1

Item No.	Compliance Requirement	Section in this CNVIS
(a)	A description of the proposed activities	Section 1.1 and 5.1
(b)	Predicted noise and vibration levels and compliance, based on background noise levels	Chapter 5 and 6
(c)	Examination of alternative methods of construction that would potentially reduce noise and vibration if the potential noise and vibration exceeds the relevant criteria	Chapter 7
(d)	Description and commitment to work practices which limit noise and vibration	Chapter 7
(e)	Description of specific noise and vibration mitigation treatments and time restrictions, including respite periods, duration and frequency	Chapter 7.3
(f)	Justification for any activities to be undertaken outside the specific construction hours defined in Conditions E21 and E22	Chapter 7.3
(g)	Internal noise audit systems including recording of daily hours of construction, progressive impact assessments as work proceeds, conducting informal checks by the Acoustic Advisor,	Chapter 7.2
(h)	Assessment of potential noise from the proposed construction methods including noise from construction vehicles and noise impacts from required traffic diversions	Chapter 5
(i)	Community consultation and notification	Section 5.1.3 and 7.2
(j)	All reasonable and feasible measures including adopting the least noisy available construction methods, systems and equipment	Chapter 5 and 7
(k)	Additional noise and vibration mitigation measures as negotiated with affected residents and other sensitive receivers.	Section 7.2.2

Project No.: 0549455

Page 2

2. ASSESSMENT METHODOLOGY

This chapter describes the assessment methodology adopted to assess potential construction noise and vibration impacts at the closest and/or potentially most affected sensitive receptors situated in the vicinity of the Project.

Nuisance, or an unacceptable level of noise and vibration amenity, may arise from construction activities associated with new or existing developments. These potential environmental issues are common to larger scale construction works and in this case are recognised in the broader Parramatta Light Rail project approval documents requiring the preparation of this CNVIS, and the mitigation and management of potential impacts during the approved works and activities.

This CNVIS has been conducted and documented to address these potential issues and applies directly to the construction phase of the Project. It applies only to construction activities, tasks, products and services on the site over which LORAC has control or influence.

On this basis, this CNVIS considers the following acoustical factors:

- Air-borne construction noise;
- Ground-borne construction noise:
- Road traffic noise during construction; and
- Ground-borne construction vibration.

Blasting activities are not required for the Project and are therefore not addressed in this CNVIS.

All sound pressure levels presented in this report (e.g. noise levels predicted at a receptor) are in decibels referenced to 2×10^{-5} Pa. All sound power levels presented in this report (e.g. noise levels assigned to specific sources) are decibels referenced to 10^{-12} W.

An acoustics glossary of relevant acoustical concepts and terminology is provided in Appendix A.

2.1 Scope of Work

To assess project construction noise and vibration (including road traffic noise), the following scope of work will be undertaken as part of the assessment:

- Review and validate the available project and third-party data and information as considered relevant to the CNVIS.
- Review aerial photography, zoning data, cadastre data and third-party assessments conducted in the area to identify potential residential and other sensitive receptors situated within the potential area of influence of the Project works.
- Identify significant (air-borne and ground-borne) noise and vibration generating plant, equipment and machinery that may be in use or activities that will be undertaken as part of the Project works and their likely/known emissions to develop applicable assessment scenarios.
- Review and validate third-party assessments conducted in the area to establish representative baseline noise levels for the area and then develop project-specific noise and vibration criteria in accordance with recognised NSW policy and guidelines as applicable to project activities.
- Complete a quantitative assessment of key acoustical factors including potential noise and vibration impacts associated with construction aspects of the Project. The quantitative assessment was completed by predicting project noise levels (via modelling where possible) for the scenarios developed, with vibration predicted via spreadsheet calculations. A qualitative assessment of low-risk acoustical factors was also completed.

Page 6

- Provide a comparison of predicted levels to the project-specific noise and vibration criteria at receptors, identify any levels that exceed criteria and determine the magnitude and extent of any impacts.
- Recommend mitigation, management measures and/or monitoring options suitable to the predicted levels and designed to minimise impacts as far as is feasible, reasonable and practicable to implement.

2.2 Policy Setting

In NSW, noise pollution is regulated through the *Protection of the Environment Operations Act 1997* (POEO Act) as the key piece of environmental protection legislation. Noise pollution is defined under the POEO Act as:

'the emission of offensive noise, which means noise that by reason of its level, nature, character or quality, or the time at which it is made, or any other circumstances, is harmful (or is likely to be harmful) to or interferes unreasonably (or is likely to interfere unreasonably) with the comfort or repose of a person outside the premises from which the noise is emitted.'

Various noise assessment guidelines endorsed by NSW consent and regulatory authorities provide a guideline framework and methodology for deriving acceptable levels and standard methods for assessing and measuring construction and operational impacts with due regard to the POEO Act. The guidelines and standards are discussed in **Section 2.3** below.

The key documents, policy, guidelines and standards relevant to the Project works are summarised below.

This CNVIS has been developed to address the requirements of the PLR (Stage 1) Critical State Significant Infrastructure Consolidated Conditions of Approval (CoA) (SSI 8285 MOD2) dated January 2019.

CoA – E42 outlines the requirement for Construction Noise and Vibration Impact Statements to be prepared for each construction site prior to noise and vibration impacts occurring and include specific mitigation measures identified through consultation with affected sensitive receptors.

2.3 Relevant Policy, Guidelines and Standards

This assessment has been conducted with due regard to and in accordance with the following policy, guidelines and standards:

- German Institute for Standardisation DIN 4150 (2016) Part 3 (DIN4150-3) Structural Vibration
 Effects of Vibration on Structures.
- International Organisation for Standardisation (ISO) 9613-2:1996 (ISO 9613:2) Acoustics Attenuation of Sound during Propagation Outdoors - Part 2: General Method of Calculation.
- International Organisation for Standardisation (ISO) 17534:2015 (ISO 17534:2015) Acoustics
 Software for the Calculation of Sound Outdoors, as achieved by the modelling software referenced in this report.
- NSW Department of Environment and Climate Change (DECC) NSW Interim Construction Noise Guideline (ICNG, 2009), July 2009.
- NSW Department of Environment, Climate Change and Water (DECCW) NSW Road Noise Policy (RNP), March 2011.
- NSW Department of Environment and Conservation NSW Environmental Noise Management Assessing Vibration: a Technical Guideline (the NSW Vibration Guideline), February 2006.
- NSW Environment Protection Authority Noise Policy for Industry (NPI, 2017), October 2017.

Page 7

- Standards Australia AS1055-2018 (AS 1055) Description and Measurement of Environmental Noise.
- Standards Australia AS IEC 61672.1-2004 (AS 61672) Electro Acoustics Sound Level Meters Specifications Monitoring or Standards Australia AS 1259.2-1990 (AS 1259) - Acoustics - Sound Level Meters – Integrating Averaging as relevant to the device.
- Standards Australia AS/IEC 60942:2004/IEC 60942:2003 (IEC 60942) Australian Standard -Electroacoustics - Sound Calibrators.
- Standards Australia AS 2436-2010 (AS 2436) Guide to Noise and Vibration Control on Construction, Demolition and Maintenance Sites.
- Transport for NSW (TfNSW) Construction Noise and Vibration Strategy, Version 4.1 (CNVS or ST-157/4.1), dated April 2019.

Further information regarding the application of the key policy and guidelines is provided below.

NSW Interim Construction Noise Guideline 2.3.1

The NSW Department of Environment and Climate Change (DECC) – NSW Interim Construction Noise Guideline (ICNG), July 2009 presents an accepted method by which construction noise impacts may be assessed for a range of receptor types for works completed in NSW. It provides a set of recommended standard hours of construction, as reproduced below:

- Monday to Friday: 7 am to 6 pm;
- Saturday: 8 am to 1 pm; and
- No work on Sundays or public holidays.

The ICNG encourages works to occur within the recommended standard hours of construction unless justification is provided. It focuses on minimising construction noise impacts, rather than only on achieving numeric noise levels, and recognises that some noise from construction sites is inevitable.

The ICNG encourages organisations involved with construction, maintenance or upgrading works (e.g. large scale contractors or Government agencies) to develop their best-practice techniques for managing construction noise and vibration, and implementing feasible and reasonable mitigation measures.

In this case, the ICNG is the suitable guideline document to quantifiably assess potential noise emissions and impacts associated with project construction. The ICNG assessment methodology has been adopted to develop project-specific construction noise management levels (refer Chapter 4), assess potential impacts (refer Chapter 5) and recommend any necessary mitigation, management measures or provisions for monitoring (refer Chapter 7).

Table 2-1 details the construction noise management levels for residential noise sensitive receptors developed in accordance with ICNG.

Page 8

Table 2-1 Construction Airborne Noise Management Levels for Residential Receptors (ICNG)

Time of day	Noise management level, L _{eq} – dBA	How to apply
Recommended standard hours (SH): Monday to Friday 7 am to 6 pm Saturday 8 am to 1 pm No work on Sundays or public holidays	Noise affected Rating Background Level (RBL) + 10 dBA	The noise affected level represents the point above w hich there may be some community reaction to noise. Where the predicted or measured LAeq, 15 minute is greater than the noise affected level, the proponent should apply all feasible and reasonable work practices to meet the noise affected level. The proponent should also inform all potentially impacted residents of the nature of works to be carried out, the expected noise levels and duration, as well as contact details.
	Highly noise affected 75 dBA	The highly noise affected level represents the point above which there may be a strong community reaction to noise. Where noise is above this level, the relevant authority (consent, determining or regulatory) may require respite periods by restricting the hours that the very noisy activities can occur, taking into account: times identified by the community when they are less sensitive to noise (such as before and after school for works near schools, or mid-morning or mid-afternoon for works near residences if the community is prepared to accept a longer period of construction in exchange for restrictions on construction times.
Outside recommended standard hours (OOH) - All other times including Public Holidays	Noise affected Rating Background Level (RBL) + 5 dBA	A strong justification would typically be required for works outside the recommended standard hours. The proponent should apply all feasible and reasonable work practices to meet the noise affected level. Where all feasible and reasonable practices have been applied and noise is more than 5 dBA above the noise affected level, the proponent should negotiate with the community. For guidance on negotiating agreements see section 7.2.2 of the ICNG.

www.erm.com Version: 1.0 Project No.: 0549455 Client: Laing O'Rourke Australia Construction Pty Ltd (LORAC)

2.3.2 Construction Noise and Vibration Strategy

The Construction Noise and Vibration Strategy (CNVS) outlines the approach to be taken to mitigate and manage construction noise and vibration from Transport for NSW (TfNSW) Infrastructure and Place Division (IP) projects.

The CNVS provides the methodology by which noise and vibration from I&S construction projects can be assessed and mitigation measures identified and applied.

The CNVS is applicable to all IP projects including urban centres, multimodal transport hubs and interchanges, and infrastructure installation and upgrades for buses, trains, light/heaw rail and ferries.

Typical construction projects covered by this strategy include (but are not limited to):

- Station upgrades commuter car parks, easy access, transport interchanges;
- Light rail infrastructure:
- Bus priority infrastructure; and
- Ferry fleet and infrastructure upgrades.

Noise Policy for Industry 2.3.3

Responsibility for the control of noise emissions in NSW is typically vested in Local Government and the NSW Environment Protection Authority (EPA). The Noise Policy for Industry (NPI, 2017) and relevant application notes provide a framework and methodology for deriving limit conditions for consent and licence conditions.

The NPI is designed for large and complex industrial sources and outlines processes designed to strike a feasible and reasonable balance between the operations of industrial activities and the protection of the community from noise levels that are intrusive or unpleasant.

The NPI measurement and evaluation methodology to quantify existing ambient and background noise levels has been adopted for this CNVIS, with the baseline values utilised to derive construction noise criteria. The NPI assessment terminology is outlined in more detail in Appendix A of this report.

Potential Sleep Disturbance Issues

As stated in the NPI the potential for sleep disturbance from maximum noise level events generated by premises during the night-time period needs to be considered. The term "sleep disturbance" is considered to be both awakenings and disturbance to sleep stages.

To evaluate potential sleep disturbance or awakening issues associated with the construction of the Project the NPI screening method has been adapted as follows. There is limited potential for sleep disturbance or awakening issues to occur, where:

- The predicted project night-time noise level (Leq. 15 minute in dBA) at any residential receptor remains below 40 dBA (or the prevailing night-time background noise level plus 5 dBA), whichever is the greater; and
- The predicted project night-time noise level (Lmax in dBA) at any residential receptor remains below 52 dBA (or the prevailing night-time background noise level plus 15 dBA), whichever is the greater.

These screening method features have been adopted for likely maximum noise level events from construction vehicles associated with the Project.

Project No.: 0549455

Page 10

2.3.4 NSW Road Noise Policy

The NSW Road Noise Policy (RNP) outlines the range of measures needed to minimise road traffic noise and its impacts. It is intended for use by acoustics specialists as well as:

- Road project proponents;
- Determining authorities and regulators involved in the approval and construction of road projects and land use developments that generate additional traffic on existing roads; and
- City and transport planners and policymakers dealing with issues such as route corridors, heavy vehicle transport and building codes.

The RNP aims to identify the strategies that address the issue of road traffic noise from existing roads, new road projects, road redevelopment projects and new traffic-generating developments. In this case, the RNP is considered the suitable document to qualitatively assess potential noise emissions and impacts associated with construction road traffic.

The RNP vary based on road type and are dependent on the development being assessed (refer to **Chapter 4**). The criteria values from the RNP were considered in the assessment of potential construction impacts, they are used to provide guidance on potential short-term and temporary impacts associated with heavy vehicle haulage and/or other like vehicles that may be required as part of the construction.

2.3.5 Vibration Guidelines and Standards

For the purposes of this CNVIS, the effects of vibration in buildings can be divided into three main categories: human comfort (annoyance), building damage (cosmetic/structural) and sensitive equipment (scientific/medical). An overview of the applicable standards and guidelines is provided below.

- Human Comfort (annoyance): The NSW Vibration Guideline provides guidance for assessing human exposure (comfort or annoyance issues) to vibration. The publication is based on British Standard (BS 6472–1992) Evaluation of Human Exposure to Vibration in Buildings (1 Hz to 80 Hz), dated 1992.
- Cosmetic and Structural Damage: There is currently no Australian policy or guideline for assessing the potential for building damage (cosmetic and structural) from vibration. To achieve the requirements of the CNVS, British Standard BS 7385 Part 2-1993 'Evaluation and measurement for vibration in buildings Part 2' has been considered for project works where applicable. BS 7385 provides safe limit guideline values, below which vibration is considered insufficient to cause structural or cosmetic damage to buildings. If a heritage building or structure is found to be structurally unsound a more conservative standard has been adopted i.e. German Standard DIN4150 Part 3-1999 (DIN4150-3) Structural Vibration Effects of Vibration on Structures, dated 1999. DIN4150-3 presents a set of safe limit values below which cosmetic or structural damage is unlikely to occur.
- The NSW Vibration Guideline, BS7385 and DIN 4150-3 criteria vary based on vibration type, receptor type and are dependent on the component frequency of the vibration event (refer **Section 4.4**). The criteria values from the NSW Vibration Guideline, BS7385 and DIN 4150-3 were considered in the assessment of potential impacts but are not reproduced here.
- Sensitive Scientific and Medical Equipment: Some scientific equipment (e.g. electron microscopes and microelectronics manufacturing equipment) can require more stringent objectives than those applicable to human comfort.
- Where manufacturer's data for the identified vibration sensitive scientific and/or medical instruments are not available, generic vibration criterion (VC) curves as detailed in this CNVIS and presented **Section 4.4** will be adopted as vibration goals.

Page 11

2.4 Noise Modelling (Air-borne Construction Noise)

The methodology, inputs and assumptions that have informed the construction and operational noise modelling are outlined below:

Table 2-2 Noise Modelling Features, Inputs and Assumptions

ID	Feature	Description
1	Noise modelling softw are	Brüel and Kjær's Predictor 7810 (Version 12) noise modelling software package was utilised to calculate noise levels using the International Organisation for Standardisation (ISO) 9613-2:1996 (ISO9613:2) - Acoustics - Attenuation of Sound during Propagation Outdoors - Part 2: General Method of Calculation noise propagation algorithms (international method for general purpose, 1/1 octaves). Meteorological corrections have been calculated via the CONCAWE method (Report no. 4/18, The propagation of noise from petroleum and petrochemical complexes to neighbouring communities, Prepared by C.J. Manning, M.Sc., M.I.O.A. Acoustic Technology Limited (Ref.AT 931), CONCAWE, Den Haag May 1981).
		■ For sound calculated using ISO9613:2, the indicated accuracy is ± 3 dBA at the source to receiver distances of up to 1000 metres and unknown at distances above 1000 metres.
		The Predictor softw are package allowed 3D elevation data to be combined with ground regions, water, foliage, significant building structures etc. and receptor locations, to create a detailed and accurate representation of the site and surrounding area. The noise model allowed for the quantification of noise levels from multiple sources, based on sound power or pressure levels emitted from each source. The model computed the noise propagation in the assessment area of influence to specifically quantify A-weighted decibels (Leq, 15 minute in dBA) at identified receptors.
2	Construction Noise Level Predictions	Sound Power Level (Lw, dBA) data incorporated into the project-specific noise models were provided by the client, obtained from relevant Australian Standards or adapted from a proprietary source term database available at the time of the assessment. This assessment has considered standard good practice mitigation measures via noise modelling by adopting the midpoint values for all sound power levels. However, Site hoarding has not been included as part of the noise modelling scenarios.
		3D 2 metres interval elevation data, zoning data and cadastre (spatial data) was obtained from the NSW Government - Land and Property Information (LPI). Buildings near the Project were included in the noise model based on this spatial data or manually digitised from aerial photography. Building regions were then included for the broader areas surrounding the Project.
		Potentially sensitive receptor locations were identified (detailed in Section 3.2) to assess construction noise impacts. These locations were selected to ensure the most affected points were assessed. The receptor locations adopted for this assessment were presented in Figure 1-1 to Figure 1-3 .
		Noise levels were calculated at 1.5 metres (m) above ground level for all receptors, in accordance with the NPI and ICNG. It is noted that ambient, background and project noise levels may be higher at receptor heights above 1.5 m. Receptor heights above

		1.5 m have not been included as part of this assessment. Where AMMM requirements are triggered at ground level they will also apply at levels above.
		In all cases, noise has been assessed at the most-affected point at or within the residential property boundary or, if that is more than 30 m from the residence, at the most-affected point within 30 m of the residence. In assessing amenity noise levels at commercial or industrial premises, the noise level is to be assessed at the reasonably most-affected point on or within the property boundary.
		 A ground factor of 0.5 w as adopted for the modelling area (0.0 is hard, 1.0 is soft).
		To accurately represent general construction emissions, capturing the size, layout and number of noise generating plant / equipment, "area sources" were utilised to predict LAeq, 15 minute noise levels. A separate area source was placed in the model for each phase of works to represent the distribution of noise across the broader project site during each work phase.
		The noise assessment scenarios and modelling data are summarised in Chapter 5 and presented in detail in Appendix B . All Lw, dBA values have considered and applied the relevant TfNSW CNVS penalties for offensive noise characteristics, prior to modelling.
3	Meteorological Conditions	General meteorological conditions for the project-specific noise models included a temperature of 12.2°C (annual mean minimum), and humidity of 73% (annual mean for 9 AM statistics), representative of average conditions for the area. An assumed atmospheric pressure of 101.33 kPA was adopted. These temperature and humidity values were determined based on annual average weather data publically available from the Bureau of Meteorology (BOM) Weather Station situated at Parramatta North (Masons Drive):
		- Site number: 066124
		- Locations: Latitude: 33.79° South / Longitude: 151.02° East
		- Elevations: 55 metres.
		For this model a Pasquill–Gifford stability Category D conditions and calm source to receptor winds (0.5 m/s) were adopted to represent neutral conditions (i.e. standard meteorological conditions as defined in the NPI).

2.5 Vibration Assessment

To assess potential vibration impacts the approach outlined in the TfNSW CNVS guideline was adopted. The TfNSW CNVS guideline outlines the applicable safe work distances for various vibration generating equipment/activities.

The most significant vibration generating equipment that would potentially be used in the construction activities of the Project include the following:

- Vibratory Roller;
- Excavator with Hammer; and
- Piling Rig Bored.
- Handheld vibration generating equipment have also been considered for this assessment including; Jackhammers, Compactors / Whacker Packers and Concrete Vibrators.

2.6 Ground-borne Noise Assessment

As outlined in **Section 2.5** above, potential sources of vibration are limited to the use of a vibratory roller, excavator with a hammer and bored piling rig. Ground-borne construction noise is usually present on tunnelling projects when significant tunnel boring equipment is operated underground.

Ground-borne noise impacts (generated by vibration) from the Project are therefore not anticipated as significant vibration generating source(s), with the potential to generate perceptible ground-borne noise, does not form part of the Project design.

Also, the ICNG assessment of ground-borne noise impacts from construction activities only applied to residential receptors. As there are no residential receptors in close proximity of the Project site, ground-borne noise is highly unlikely to be audible or perceptible at any surrounding residential receptors at any times during the construction of the Project. Based on this understanding, it is expected that ground-borne noise generated by the construction works will comply with the requirements of the ICNG. Therefore, further assessment of ground-borne noise impacts is not considered to be necessary and will not be undertaken in this CNVIS.

Given the limited potential for any ground-borne noise impacts to occur, no further recommendations for specific mitigation and management measures are warranted or provided in this assessment.

2.7 Cumulative Impacts

Airborne Noise: noise impact assessments are generally based on predicting project-specific levels at the closest and/or most affected receptors and then comparing these to criteria or management levels that apply to the type of emission being considered. To assess potential cumulative impacts a varied approach has been adopted as described below.

The construction noise management levels are based on both fixed values identified in the ICNG and existing noise levels measured at locations surrounding the site. The ICNG management levels focus on the direct impacts from the site under assessment, cumulative impacts are beyond the control of LORAC, are temporary in most circumstances and are best managed by local or state consent authorities for significant projects. Therefore, a qualitative assessment of potential cumulative impacts has been conducted but limited discussion regarding cumulative impacts is required.

Road Traffic Noise: the road traffic noise criteria (RNP) are fixed values but are derived to assess the site noise level contribution (i.e. project vehicles on public roads) and the effects of cumulative road traffic noise impacts. Therefore, the RNP criteria address potential cumulative impacts without further discussion required.

Vibration: the vibration criteria (the NSW vibration guideline and DIN4150-3) are again fixed values derived to assess the site vibration level contribution, cumulative impacts will unlikely occur in most circumstances due to the lack of impact from existing influential sources. In addition, the CNVS provides a conservative vibration damage screening level per receiver type is given below:

- Reinforced or framed structures: 25.0 mm/s.
- Unreinforced or light framed structures: 7.5 mm/s.

At locations where the predicted and/or measured vibration levels are greater than shown above (peak component particle velocity), a more detailed analysis of the building structure, vibration source, dominant frequencies and dynamic characteristics of the structure would be required to determine the applicable safe vibration level. This analysis would also consider any cumulative impacts of existing vibration sources.

Where vibration sensitive scientific and/or medical instruments are likely to be in use inside an identified vibration sensitive receptor. Background vibration monitoring may be required in combination with the manufacturer or CNVS criteria to establish specific screening criteria. Cumulative impacts from existing vibration sources would be considered in the development of these screening criteria.

No heritage structures were found to be within the potential area of vibration impact generated by The Project and have been excluded from this assessment.

Therefore, a qualitative assessment of potential cumulative impacts from vibration has been conducted but limited discussion regarding cumulative impacts is required.

Community Consultation: with the above features in mind cumulative impacts associated with nearby construction works (e.g. other contractors associated with PLR) will be managed through the community consultation process. TfNSW takes the lead on communications that are occurring within TfNSW land and the project works undertaken by LORAC will be included as a combined notification. Further detail of the community consultation process is detailed in the following document: Great River City – *Communication and Engagement Plan - PLR1SOM-GLR-ALL-PM-PLN-000007* (Communication and Engagement Plan) (2019).

3. EXISTING ENVIRONMENT

A key element in assessing environmental noise impacts is an understanding of the existing ambient and background noise levels in the vicinity of the closest and/or potentially most affected receptors situated in proximity to the site. The noise environment of the receptors that are located in the vicinity of the Project is best described as 'urban' - defined by the NSW Environment Protection Authority (EPA) NPI as an area with an acoustical environment that:

- Is dominated by 'urban hum' or industrial source noise, where urban hum means the aggregate sound of many unidentifiable, mostly traffic and/or industrial related sound sources;
- Has through-traffic with characteristically heavy and continuous traffic flows during peak periods;
- Is near commercial districts or industrial districts; and
- Has any combination of the above.

The Project site is located in a "heavy industrial" zone as defined on an LEP or other planning instruments, and adjacent to a "private recreation" zone which is the Rosehill Garden to the west. Nearest residential zones are located approximately 870 kilometres to the west, across James Ruse Drive. The nearest residential zones include a mixed of "mixed-use" residential/commercial, low-density residential, medium density residential and high-density residential zones.

3.1 Noise Catchment Areas

Three 'Noise Catchment Areas' (NCA) have been established surrounding the SAM Facility works. These NCAs were adopted from those presented in Technical Paper 13 of the PLR EIS (*Parramatta Light Rail, Stage 1 Noise and Vibration Impact Assessment, prepared by SLR dated August 2017*). These NCA are described below in **Table 3.1**. These NCA were established to approximate areas of land that may experience similar existing noise levels.

Table 3.1 Noise Catchment Areas

NCA	Description	Reference Image
NCA11	This NCA consists of mixed use (commercial) and residential (dw elling) receptors that are situated on the western side of Arthur Street, west of the project site. Ninety three (93) receptors are situated within NCA11. The properties in this NCA are in the broader study area and are not under major influence from the project site.	
NCA12	This NCA consists mostly of industrial and commercial receptors, with the majority of residential (dwelling) and other sensitive (e.g. educational) receptors situated on the western side James Ruse Drive, west of the project site. Three hundred and eighty three (383) receptors are situated within NCA12. The properties in this NCA are in the primary study area and are the most influence from the project site.	

NCA	Description	Reference Image
NCA14	This NCA consists of mostly of industrial and commercial receptors with some educational and residential (dw elling) receptors that are situated on the northern side of the Parramatta River, north of the project site. One hundred and eighty (180) receptors are situated within NCA14. The properties in this NCA are in the broader study area and are not under major influence from the project site.	

3.2 Potentially Sensitive Receptors

In accordance with CoA - E20, ERM conducted a detailed land use survey on 26 March 2020 by undertaking a walk-through of the surrounding areas to the Project site. The detailed land use survey has identified sensitive receptor locations closest to and/or potentially most affected by the Project's construction activities. The survey was conducted within 1.5 kilometres radius from the Project site.

3.2.1 Residential Receptors

The nearest and/or potentially most affected residential receptor areas in relation to the Project site are the residences to the west of James Ruse Drive, between Oak Street and A'Becketts Creek. Most of the residential properties in the surrounding area have been identified to be either single storey or two-storey low-rise buildings. Seven multi-storey residential apartment buildings identified in the surrounding area and they are all located along James Ruse Drive. The multi-storey apartments identified are:

- APX Apartments, 8 Hope Street, Rosehill three levels;
- Raceview Apartments, 120 James Ruse Drive, Rosehill nine levels;
- Ascot Apartments, 3-5 Weston Street, Rosehill eight levels;
- Rydges Hotel, 116-118 James Ruse Drive, Rosehill nine levels;
- Waldorf Apartments, 110-114 James Ruse Drive, Rosehill 12 levels;
- 102-108 James Ruse Drive nine levels; and
- 82-88 james Ruse Drive five levels.

3.2.2 Sensitive Receptors (Non-Residential)

The nearest non-residential receptors in relation to the Project site are:

- Industrial premises to the north, east and south of the Project site;
- Educational facilities
 - Rosehill Community School (103-105 Hassall Street, Rosehill);
 - Rainbow Village Child Care (42 Weston Street, Harris Park);
 - Rosehill Montessori Kindergarten (42 Weston Street, Harris Park);
 - Little Angels Kindergarten (29 Prospect Street, Rosehill);
 - Rosehill Public School (Prospect Street, Rosehill);
 - Fun2Learn Early Learning Centre (2-4 Virginia Street, Rosehill); and
 - Kinderoo Preschool (38 Eleanor Street, Rosehill).
- Place of worship BAPS Shri Swaminarayan Mandir (40 Eleanor Street, Rosehill);
- Offices and retail outlets precinct bounded by Hassall Street to the north, Oak Street to the south,
 James Ruse Drive to the east and Arthur Street to the west;
- Active Recreational Area Rosehill Garden racecourse adjacent to the west of the Project site and Rosehill Bowling Club located at James Ruse Drive and Hassall Street; and
- The James Hardie, Research & Product Development Centre (James Hardie) located at 10 Colquboun St, Rosehill NSW 2142 was identified to have scientific equipment and would, therefore, require vibration impacts assessed to the more stringent generic vibration criterion (VC) curves. Refer Section 4.4.3 for further detail.

3.2.3 Representative Receptors for Modelling

Six hundred and fifty (650) representative receptors locations have been identified to be the closest and/or potentially most affected locations situated within the potential area of influence of SAM Facility works. A full list of the 650 receptor locations is listed in **Appendix C**. The closest receptors to the site are indicated in **Figure 1-3** with the top 40 detailed in **Table 3-2** below.

These locations were established based on the receptors identified in the PLR (Stage 1) Westmead to Carlingford via Parramatta CBD and Camellia Environmental Impact Statement (EIS), prepared by for Transport for NSW (TfNSW), dated August 2017), the detailed land use survey undertaken on 26 March 2020, review of aerial photography, land use / cadastre data and the results of preliminary noise modelling. These locations do not represent all receptors located in the vicinity of SAM Facility works but have been selected for the purposes of this noise and vibration impact assessment; they are considered to be representative of locations that will potentially experience the highest impacts associated with SAM Facility works, and will be the most affected during construction.

 Table 3-2
 Representative Sensitive Receptors

Receptor ID	Receptor Address	Receptor Type	GPS Co-ordinates (UTM, Zone 56H)	
			Easting	Northing
2781 - 2789	2781 - 2789		317816	6255991
2790	13a Grand Avenue, Camellia 2142	Industrial	317859	6255993

3.3 Existing Background Noise Levels

Existing conditions have been quantified from the data presented in Technical Paper 13 of the PLR EIS (*Parramatta Light Rail*, *Stage 1 Noise and Vibration Impact Assessment*, *prepared by SLR dated August 2017*). Environmental noise monitoring was conducted by SLR at sixteen (16) locations along the PLR alignment during October 2016 to inform the EIS. These monitoring locations are identified in the EIS as B.01 and B.16.

Supplementary data has been obtained from other reports relevant to the Project site, these are:

- PLR Camellia Stabling and Maintenance Facility, Construction Noise and Vibration Impact Statement (CNVIS), prepared by ERM for Ventia Pty Ltd, dated June 2019 (ERM 2019).
- PLR Camellia Stabling and Maintenance Facility, Construction Noise and Vibration Management Plan (CNVMP), prepared by ERM for Ventia Pty Ltd, dated August 2019 (Ventia 2019).

The ERM/Ventia 2019 report provides more recent baseline noise data measured in the vicinity of the SAM Facility relevant to the NCA12 and this data has adopted for this Project. The SLR 2017 report provides baseline data for NCA11 and NCA14 as this data adopted for this Project.

The RBLs adopted for each NCA are summarised in **Table 3.3** below.

Table 3.3 Rating Background Noise Levels (RBL)

Noise Catchment Area (NCA)	Rating Background Noise Levels (RBL) in dBA				
	Daytime (7am - 6pm)	Evening (6pm - 10pm)	Night-time (10pm - 7am)		
NCA11	43	40	34		
NCA12	44	44	41		
NCA14	45	43	38		

- 1. Source: SLR 2017, ERM/Ventia 2019
- 2. Daytime is the period from 7am to 6pm Monday to Saturday; or 8am to 6pm on Sundays and Public Holidays;
- 3. Evening is the period from 6pm to 10pm; and
- 4. Night time is all remaining periods.

RBLs are utilised to establish project specific noise management levels (NMLs) for residential receptors, this is further outlined in **Chapter 4**. Non-residential NMLs are established from fixed values derived from the ICNG.

4. PROJECT SPECIFIC MANAGEMENT LEVELS AND CRITERIA

This Chapter presents the construction and operational noise assessment criteria established for the Project based on the assessment methodology presented in **Chapter 2** and in accordance with the ICNG.

4.1 Air-Borne Noise Management Levels

The project-specific construction "Noise Management Levels" (NML), for works within and outside the recommended standard hours for construction, are presented in **Table 4-1** below.

These NML have been established with due regard to the requirements of the ICNG for all identified residential (dwelling) and other sensitive (non-residential) receptors. NML for all periods are provided for completeness despite construction works is limited to the recommended standard hours for construction presented in the ICNG.

For residential (dwelling) receptors the NML are based on the RBL values presented in Section 3.3.

As per **Section 2.3.3** of this report, two thresholds have been considered to establish sleep disturbance criteria based on which impacts to residential receptors can be evaluated.

Table 4-1 Construction Noise Management Levels (NML)

Receptor Type	Construction Noise Management Levels in dBA				HNM L, Leq, 15 minute, dBA	Sleep Disturk Criteria in dB	
	Standard Hours	Out-of-Hours			Daytime (Standard	Night-time only	
	Day	Day	Evening	Night	Hours)	Leq, 15 minute	Lmax
Residential NCA11	53	48	45	39	75	40	52
Residential NCA12	54	49	49	46	75	46	56
Residential NCA14	55	50	48	43	75	43	53
Educational Facility	55 ¹	55 ¹	55 ¹	55 ¹	_2	_2	_2
Medical Facility	55 ¹	55 ¹	55 ¹	55 ¹	_2	_2	_2
Places of Worship	55 ¹	55 ¹	55 ¹	55 ¹	_2	_2	_2
Active Recreation	65	65	65	65	_2	_2	_2
Passive Recreation	60	60	60	60	_2	_2	_2
Commercial	70	70	70	70	_2	_2	_2
Industrial	75	75	75	75	_2	_2	_2

External goal of 55 dBA applies. The ICNG recommends that construction noise levels do not exceed 45 dBA (Leq, 15minute) internally within school classrooms, hospital wards and places of worship when in use. For the purpose of the CNVIS the internal noise level has been translated to an external level of 55 dBA (Leq, 15minute) based on the accepted level of attenuation (10dB) that is readily achieved through windows, partially opened for ventilation.

2. Dash "-"indicates that these criteria do not apply to that receptor.

4.2 Road Traffic Noise Management Levels

The ICNG does not include any criteria to assess off-site traffic noise associated with construction and demolition. Criteria for off-site road traffic noise applicable to 'existing residences affected by additional traffic on existing roads generated by land use developments' are specified in the RNP.

An objective of the RNP is to protect sensitive receptors against excessive decreases in amenity as the result of a project by applying apply relevant permissible noise increase criteria. In assessing feasible and reasonable mitigation measures, an increase of up to 2 dBA represents a minor impact that is considered barely perceptible to the average person.

On this basis, as outlined in the CNVS, construction traffic NMLs set at 2 dBA above the existing road traffic noise levels during the daytime and night-time periods are considered appropriate to identify the onset of potential noise impacts. Where the road traffic noise levels are predicted to increase by more than 2 dBA as a result of construction traffic, consideration would be given to applying feasible and reasonable noise mitigation measures to reduce the potential noise impacts and preserve acoustic amenity.

In considering feasible and reasonable mitigation measures where the relevant noise increase is greater than 2 dB, consideration would also be given to the actual noise levels associated with construction traffic and whether or not these levels comply with the road traffic noise criteria in the RNP, refer **Table 4-2**.

Table 4-2 Road Traffic Noise Management Levels

Category	Applicable Road	Noise Management Level – dBA	
		Daytim e ¹	Night-time ²
Sub-arterial roads	e.g. James Ruse Drive	Leq,15 hour ≤ 60 (external)	Leq,9 hour ≤ 55 (external)
Local roads	e.g. Grand Avenue	Leq,1 hour ≤ 55 (external)	Leq,1 hour ≤ 50 (external)

Source: CNVS and RNP

4.3 Ground-Borne Noise Management Levels

In accordance with the ICNG and the CNVS, the management levels for ground-borne noise management levels applies to residential receptors only.

Ground-borne noise is noise generated by vibration transmitted through the ground into a structure. The following ground-borne noise levels for residences are nominated in the ICNG and ICNG indicate when management actions would need to be implemented. These levels recognise the temporary nature of construction and are only applicable when ground-borne noise levels are higher than air-borne noise levels.

The ground-borne noise levels are for evening and night-time periods only, as the objectives are to protect the amenity and sleep of people when they are at home. Ground-borne noise management levels from the ICNG are summarised in **Table 4-3** below.

^{1.} Daytime means between 7:00 amand 10:00 pm, Monday to Sunday inclusive; and

^{2.} Night time means between 10:00 pm to 7:00 am, Monday to Sunday inclusive.

Table 4-3 Ground-Borne Noise Management Levels

Receptor Type	Noise Management Levels – dBA			
	Daytime ¹	Evening ²	Night-time ³	
Residential (internal)	Human comfort vibration objectives only	40	35	

Source: ICNG and CNVS

- 1. Daytime means between 7:00 amand 6:00 pm, Monday to Sunday inclusive;
- 2. Evening means between 6:00 pmand 10:00 pm, Monday to Sunday inclusive; and
- 3. Night time means between 10:00 pm to 7:00 am, Monday to Sunday inclusive.

As ground-borne noise from the Project's construction activities is highly unlikely to be audible or perceptible at any surrounding residential receptors, the assessment of ground-borne noise impacts is not considered to be necessary and will not be undertaken in this CNVIS. The ground-borne noise management levels have been presented in this section for completeness of the CNVIS.

4.4 Vibration Management Levels

Based on the CNVS methodology, impacts from vibration will be considered in terms of effects on building occupants (human comfort), the effects on the building structure (structural/cosmetic damage) and the effects on sensitive medical/scientific equipment. The following construction vibration management levels / criteria will apply to the Project as presented below.

4.4.1 Human Comfort

The NSW Vibration Guideline and the CNVS provide guidance for assessing human exposure to vibration. These documents are based on *British Standard (BS 6472–1992) – Evaluation of Human Exposure to Vibration in Buildings (1 Hz to 80 Hz) dated 1992*. The vibration dose values recommended in BS 6472-1992 for which various levels of adverse comment from occupants may be expected are presented in **Table 4-4**.

Table 4-4 Human Comfort – Vibration Dose Values

Location	Assessment Period	Preferre	ed Values	Maximum Values		
		z axis	x and y axes	z axis	x and y axes	
Continuous Vibration (m/s	²)					
Critical Areas	Daytime or Night-time	0.005	0.0036	0.010	0.0072	
Residences	Daytime	0.010	0.0071	0.020	0.014	
	Night-time	0.007	0.005	0.014	0.010	
Offices, schools, educational institutions and places of w orship	Daytime or Night-time	0.020	0.014	0.040	0.028	
Workshops	Daytime or Night-time	0.040	0.029	0.080	0.058	
Impulsive Vibration (m/s²)		,			,	
Critical Areas	Daytime or Night-time	0.005	0.0036	0.010	0.0072	
Residences	Daytime	0.30	0.21	0.60	0.42	
	Night-time	0.10	0.071	0.20	0.14	
Offices, schools, educational institutions and places of w orship	Daytime or Night-time	0.64	0.46	1.28	0.92	
Workshops	Daytime or Night-time	0.64	0.46	1.28	0.92	
Intermittent Vibration (m/s	1.75)	,			,	
Critical Areas	Daytime or Night-time	0.10		0.20		
Residences	Daytime	0.20		0.40		
	Night-time	0.13		0.26		
Offices, schools, educational institutions and places of w orship	Daytime or Night-time	0.40		0.80		
Workshops	Daytime or Night-time	0.80		1.60		

^{1.} Daytime is 7am-10pm and Night-time is 10pm-7am.

4.4.2 Building Damage (Structural/Cosmetic Damage)

To achieve the requirements of the CNVS, British Standard BS7385: Part 2-1993 (BS 7385) – Evaluation and Measurement for Vibration in Buildings – Part 2 – Guide to Damage Levels from Groundborne Vibration, dated 1993 is presented in **Table 4-4** and will be considered during works where applicable. BS 7385 provides safe limit guideline values, below which vibration is considered insufficient to cause structural or cosmetic damage to buildings.

For continuous and impulsive vibration, the preferred and maximum values are weighted acceleration values (Wg for z-axis and Wd for x and y-axis).

^{3.} For intermittent vibration, the preferred and maximum values are Vibration Dose Values (VDVs), based on the weighted acceleration values.

Table 4-5 Building Damage (BS 7385) – Peak Particle Velocity

Line	Type of Building	Peak Particle Velocity (PPV in mm/s) in the Frequency Range of Predominant Pulse					
		4 Hz to 15 Hz	4 Hz to 15 Hz				
1	Reinforced or framed structures Industrial and heavy commercial buildings	50mm/s at 4 Hz and above	•				
2	Unreinforced or light framed structures. Residential or light commercial type buildings	15mm/s at 4 Hz increasing to 20mm/s at 15 Hz	15mm/s at 4 Hz increasing to 20mm/s at 15 Hz				

Source: BS 7385 and CNVS

For most construction activities involving intermittent vibration sources such as rock breakers, piling rigs, vibratory rollers and the like, the predominant vibration energy occurs at frequencies greater than 4 Hz (usually in the 10 Hz to 100 Hz range). On this basis, a conservative vibration damage screening level per receptor type is given below:

- Reinforced or framed structures: 25.0 mm/s
- Unreinforced or light framed structures: 7.5 mm/s

At locations where the predicted and/or measured vibration levels are greater than shown above (peak component particle velocity), a more detailed analysis of the building structure, vibration source, dominant frequencies and dynamic characteristics of the structure would be required to determine the applicable safe vibration level.

Heritage Structures: in accordance with the CNVS, if a heritage building or structure is found to be structurally unsound (following inspection) a more conservative cosmetic damage criteria of **2.5 mm/s** peak component particle velocity from the German Institute for Standardisation – DIN 4150 (1999-02) Part 3 (DIN4150:3) – Structural Vibration - Effects of Vibration on Structures, dated 1999 would be considered.

According to the *Pre-Construction Structural Condition Survey of Endeavour Energy Building* report, Revision D, dated 04/10/2018 prepared by BG&E, there were no heritage structures identified in close proximity to the Project. The DIN4150:3 criteria for heritage structures are therefore not used for assessment in this report.

4.4.3 Sensitive Scientific and Medical Equipment

Some scientific equipment (e.g. electron microscopes and microelectronics manufacturing equipment) can require more stringent objectives than those applicable to human comfort.

Where it has been identified that vibration sensitive scientific and/or medical instruments are likely to be in use inside the premises of an identified vibration sensitive receptor, objectives for the satisfactory operation of the instrument would be sourced from manufacturer's data. Where manufacturer's data is not available, generic vibration criterion (VC) curves as detailed in the CNVS and presented below in **Table 4-6** and would be adopted as vibration goals.

It should be noted that these criteria are very conservative, therefore baseline vibration measurements may be undertaken at receptors that are identified to contain sensitive scientific/medical equipment prior to construction activities being undertaken. The baseline data in combination with the VC curves presented below would ascertain project/equipment specific vibration criteria.

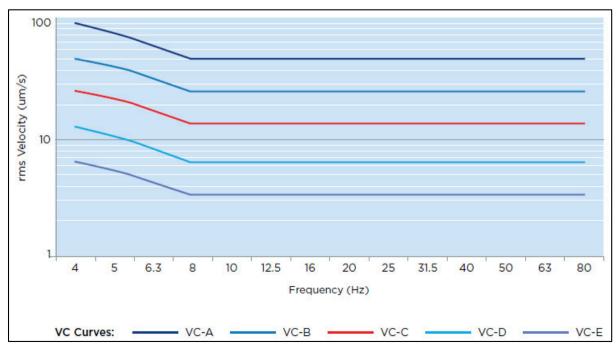

Consultation with James Hardie has identified that existing potentially vibration sensitive equipment is located within the X-Ray and Chemical Laboratory of the Research & Product Development Centre. These sensitive scientific equipment include an XRF (x-ray diffraction), TGA (thermogravimetric analysis) and LECO (metallography).

Table 4-6 Application and Interpretation of the Generic Vibration Criterion (VC) Curve

Criterion Curve	Max Level (μm/sec, rms) ¹	Detail Size (microns) ²	Description of Use
VC-A	50	8	Adequate in most instances for optical microscopes to 400X, microbalances, optical balances, proximity and projection aligners, etc.
VC-B	25	3	An appropriate standard for optical microscopes to 1000X, inspection and lithography equipment (including steppers) to 3-micron line widths.
VC-C	12.5	1	A good standard for most lithography and inspection equipment to 1-micron detail size.
VC-D	6	0.3	Suitable in most instances for the most demanding equipment including electron microscopes and E-Beam systems, operating to the limits of their capability.
VC-E	3	0.1	A difficult criterion to achieve in most instances. Assumed to be adequate for the most demanding of sensitive systems including long path, laser-based, small target systems and other systems requiring extraordinary dynamic stability.

- 1. As measured in one-third octave bands of frequency over the frequency range 8 to 100 Hz.
- The detail size refers to the line widths for microelectronics fabrication, the particle (cell) size for medical and pharmaceutical research, etc. The values given take into account the observation requirements of many items depend upon the detail size of the process.

Figure 4-1 Vibration Criterion (VC) Curves (Source: CNVS)

Baseline Vibration Measurements

A baseline vibration monitoring campaign was conducted in March 2019 to gain an understanding of the existing conditions experienced within the James Hardie, Research & Product Development Centre (James Hardie) located at 10 Colquboun St, Rosehill NSW 2142. This monitoring is documented in the PLR – Camellia Stabling and Maintenance Facility Construction Vibration Impact Assessment (CVIA), prepared by ERM for Ventia Pty Ltd, dated April 2019 (ERM 2019a). Prior to enabling works and remediation activities of the SAM Facility commencing, it was important to quantify the existing vibration conditions to ascertain project-specific vibration goals for any future attended monitoring that becomes necessary to measure and assess compliance.

Based on the results and findings of the ERM 2019a report, it was concluded that:

- Event based vibration monitoring (attended measurements) are necessary at the commencement
 of vibration generating activities (within close proximity to the James Hardie building) to confirm
 that vibration levels align with those presented in this report i.e. below 0.300 mm/s (PPV).
- Continuous vibration monitoring (unattended with audible, visible and SMS alarms) should be conducted at the nearest sensitive receptors/building whenever vibration generating activities need to be undertaken within 21 metres from the James Hardie laboratory containing sensitive equipment.
- If measured vibration levels, associated with the project's activities are:
 - Below and compliant with the relevant TfNSW CNVS guideline values, no further mitigation and/or management measures are required.
 - Compliant with the measured baseline safe limits, no further mitigation and/or management measures are required but due care should be taken to prevent any significant increase in vibration.
 - Above the measured baseline safe limits presented in this report, works should cease until further mitigation and/or management measures can be implemented.
 - Refer **Table 4-7** below for Vibration monitoring strategy.

Table 4-7 Vibration Monitoring Strategy (Sensitive Equipment)

Monitoring Result	Response
Less than 0.250 mm/s (PPV)	Continue to monitor.
Greater than 0.250 mm/s (PPV), less than 0.300 mm/s (PPV)	 Confirm that vibration event was caused by construction activities (e.g. visual confirmation or corresponding frequency). Email notification of result. Continue to work but implement: perform attended evaluation; reassess criteria if required; and/or consult with James Hardie If vibration event was not site related, continue to monitor.
Greater than 0.300 mm/s (PPV)	Confirm that vibration event was caused by construction activities (e.g. visual confirmation or corresponding frequency). Email notification of result. If construction did cause vibration, cease current construction activity. Alternative construction methodologies required to continue work. If vibration event was not site related, continue to monitor.

4.5 Threshold for Additional Mitigation Measures

The project-specific mitigation measures are a feature to be outlined in the CNVMP and are defined based on the activities proposed and potential impacts. "Standard" mitigation (and practices) applicable to the Project works are described in Section 8 of the CNVS and the actions set out must be implemented on the construction of the Project.

Where the predicted "mitigated" construction noise levels are above the project specific (ICNG) noise management levels (NMLs), the Additional Mitigation Measures Matrix (AMMM) identified in Section 8 of the CNVS is to be implemented. The approach, guided by the AMMM, is primarily aimed at proactive engagement with affected sensitive receptors rather than additional noise reducing mitigation. The AMMM applies to all receptor types where these receptors are in-use.

The types of additional mitigation measures are listed in **Table 4-8** and described in the CNVS.

Table 4-8 Additional Mitigation Measures

Measure	Abbreviation
Alternative accommodation	AA
Alternative construction methodology	AC
Duration reduction	DR
Project notification	PN
Project-specific respite offer	RO
Respite period	RP
Specific notification, individual briefings or phone call	SN
Verification monitoring	V
Source: CNVS	

The project-specific AMMM for construction (air-borne) noise are identified in **Table 4-9**. Any air-borne noise level exceedances of the AMMM thresholds are highlighted in red, blue, olive green or purple (as shown in **Appendix C**) as is applicable to the findings of this assessment. The project-specific AMMM for ground-borne noise and ground-borne vibration are identified in **Table 4-10** and **Table 4-11** respectively.

5. IMPACT ASSESSMENT

This chapter presents an evaluation of the magnitude and extent of any potential impacts associated with the project.

5.1 Air-borne Construction Noise

An overview of the indicative noise generating construction activities anticipated to occur during construction of the SAM Facility is presented in **Table 5-1** below. This staging has been provided by LORAC for this noise and vibration assessment. The indicative construction schedule/hours of work that was considered for this assessment is also provided. Details of these construction works and scenarios are presented in **Appendix B**.

Based on the noise modelling methodology described in **Chapter 2** of this report, air-borne noise emissions (Leq, 15 minute in dBA) have been predicted for the key project noise generating stages, work elements, equipment and associated activities.

These construction emission sources/scenarios are summarised below in **Table 5-1**. The indicative construction schedule/hours of work (provided by LORAC) that was considered for this assessment is also provided. The detailed noise modelling data and assessment scenarios are provided in **Appendix B**. An overview of the indicative proposed plant and equipment, and their sound power levels (Lw) are presented in **Appendix B**. Sound power levels provided in **Table 5-1** are based on the likely usage of each piece of plant/equipment during a worst case 15-minute period.

The predicted noise levels are provided in **Table 5-2** to **Table 5-4** for each scenario. Due to the large number of receptors only the 20 most affected receptors in each scenario have been displayed in this section of the CNVIS. For the full set of receptor results, refer to **Appendix C**. A compliance assessment for all 30 Scenarios is also provided in **Appendix C**. In these compliance tables:

- Predicted noise levels above the Highly Noise Affected Management Level (HNML) of 75 dBA (Leq, 15 minute) are highlighted in bold and underlined typeset.
- Out-of-Hours Work (OOHW) for this assessment are limited to daytime non-standard hours i.e. work occurring outside the recommended standard hour of construction during the daytime period on Saturday and Sunday;
- N/A identifies that the works are not proposed to occur during that assessment period (i.e. evening and night –time periods)

The predicted values do not represent a constant noise emission that would be experienced by the community on a daily basis throughout the Project's construction schedule, they will only be experienced for limited periods of time when those specific activities are occurring, and they will not be experienced over the whole assessment period (e.g. daytime, evening or night time periods).

The AMMM requirements for each assessment scenario is shown in each table in **Appendix C** based on the thresholds and colours identified in **Table 4-9** above. As night-time works are not proposed for the SAM Facility works, prediction of potential maximum noise events and comparison to sleep disturbance criteria have not been undertaken.

Table 5-1 Construction Scenarios and Indicative Construction Schedule

Scenario ID	Project Phase	Activity	Schedule	Hours of Work	Potential (AB / GB / Vibration) Impact/s	Sound Power Level (LW) in dBA
SCN 01	General	Establishment/operation of site facilities	3/02/2020 - 11/05/2021	7am-6pm	AB Noise	115
SCN 02	General	Clearing and grubbing	17/02/2020 - 18/02/2020	7am-6pm	AB Noise	124
SCN 03	General	Survey and inspections	3/02/2020 - 11/05/2020	7am-6pm	AB Noise	112
SCN 04	General Landscaping 26/10/2020 - 7/10/2021 7am-6pm AB Noise		AB Noise	122		
SCN 05	General	Deliveries	3/02/2020 - 20/01/2022	7am-6pm	AB Noise / Vibration	117

SCN 15	Roads and Access	Road works (trimming, compacting)	08/09/2020 - 08/09/2021	7am-6pm	AB Noise / Vibration	118

PARRAMATTA LIGHT RAIL - STABLING AND MAINTENANCE (SAM) FACILITY

Construction Noise and Vibration Impact Statement (CNVIS)

SCN 16	Roads and Access	Road paving and surfacing	10/09/2020 - 01/12/2020	7am-6pm	AB Noise	117
SCN 17	Roads and Access	Kerb, guttering and footpaths	7/10/2020 - 02/09/2021	7am-6pm	AB Noise / Vibration	115
SCN 18	Electrical	LV/Comms CSR routes and cabling	21/07/2020 - 22/09/2020	7am-6pm	AB Noise	111
SCN 19	Electrical	Install power and lighting	3/09/2020 - 12/01/2021	7am-6pm	AB Noise	112
SCN 20	Electrical	Earthing, bonding and switch rooms	4/01/2021 - 08/02/2021	7am-6pm	AB Noise	115
SCN 21	Electrical	Internal electrical fit-out	08/01/2021 - 3/08/2021	7am-6pm	AB Noise	112
SCN 22	Electrical	Install lighting poles and pits	05/07/2021 - 31/08/2021	7am-6pm	AB Noise	111
SCN 23	Rail Systems	Install CSR routes and cabling	09/02/2021 - 19/10/2021	7am-6pm	AB Noise	117
SCN 24	Rail Systems	OHW Footings Construction	02/03/2021- 07/05/2021	7am-6pm	AB Noise	113
SCN 25	Rail Systems	OHW wiring installation	23/02/2021 - 16/09/2021	7am-6pm	AB Noise	113
SCN 26	Rail Systems	Signal installation and cabling	09/02/2021 - 19/10/2021	7am-6pm	AB Noise	117
SCN 27	Rail Systems	Install points, interlocks, stops and buffers, detection devices etc.	02/11/2020 - 19/02/2021	7am-6pm	AB Noise	117
SCN 28	Track	Track slab construction	10/11/2020 - 13/10/2021	7am-6pm	AB Noise	118
SCN 29	Track	Construct turnouts and crossovers	31/08/2020 - 29/09/2020	7am-6pm	AB Noise / Vibration	114
SCN 30	Track	Sleeper and rail installation	10/11/2020 - 4/03/2021	7am-6pm	AB Noise	118

^{1.} Hours of work and schedule are subject to change based on updated project scheduling. This will result in ongoing consultation with sensitive receptors.

5.1.2 Managing Concurrent Works

Air-borne noise levels have been predicted via 3D noise modelling for a range of works and activities associated with the projects construction. These predicted noise levels are detailed in the results tables above and address each work area/activity so that any additional mitigation and management measures (to those already incorporated into the construction design and noise modelling) may be defined for each representative worst-case assessment scenario.

This method is typical of NSW construction projects especially those of the scale of the PLR project, where there is a large temporal boundary (multiple years of construction program). In these cases there is limited potential for significantly increased noise levels and associated impacts to occur due to concurrent works.

This is primarily due to the dominant influence of the works conducted at or near the most affected receptor (on which the CNVIS and CNVMP is based), which will mask the influence of other works occurring at the time.

The construction schedule / timing of works is also an influence when considering this potential as in many cases there are different activities that will be undertaken at the same location over the course of the construction schedule i.e. they will not occur concurrently.

The precautionary nature of the predictive inputs that consider all plant, equipment and/or machinery operating concurrently for each scenario are also an influence when considering this feature. The predicted values do not represent a constant noise emission that would be experienced by the community on a daily basis throughout the project's construction schedule, they will only be experienced for limited periods of time when those specific activities are occurring, and they will not be experienced over the whole daytime, evening or night time period.

When evaluating potential effects of concurrent work it is also important to consider how noise levels add together. For example, if two separate activities are occurring and the noise level from each is 55 dBA at the receptor, then the resultant noise level is 58 dBA. This increase in noise level (3 dBA) will be just perceptible and a significant change in impact unlikely. If two separate activities are occurring and the noise level from one is 55 dBA and the other is 53 dBA, then the resultant noise level is 57 dBA. This increase in noise level (2 dBA) will be hardly perceptible in practice and a significant change in impact is highly unlikely.

Cumulative impacts may occur with other construction projects proposed for the area. Where issues arise associated with nearby construction works (e.g. other contractors) cumulative impacts will be managed through the community consultation process as outlined in **Section 2.7**. A noise prediction tool will also be used by LORAC and coordinated to accommodate changes in conditions. The prediction tool will be able to accommodate cumulative noise impacts where necessary.

Based on this information the CNVMP will provide a set of provisions, safeguards and monitoring contingencies are provided in the unlikely event that additional issues associated with concurrent works are identified and further mitigation is required. These provisions, safeguards and contingencies are based on the recommendations outlined in **Chapter 7** of this report.

5.1.1 Discussion of Results

The resultant noise levels are summarised below:

- The highest predicted (LAeq, 15 minute) noise level is 83 dBA associated with the "Clearing and Grubbing" (SCN02) works at the adjoining commercial receptor to the south of the Project site. Other scenarios with the similarly elevated predicted noise levels at receptors are associated with "Installation of services and fencing" (SCN06) and "Concrete Works" (SCN11) works.
- Predicted construction noise levels (LAeq, 15 minute) from the following scenarios are below the NML for both daytime standard hours and daytime non-standard hours: SCN01, SCN03, SCN05, SCN08, SCN09, SCN12, SCN13, SCN14, SCN15, SCN16, SCN17, SCN18, SCN19, SCN20, SCN21, SCN22, SCN23, SCN24, SCN25, SCN26, SCN27, SCN28, SCN29 and SCN30.
- Predicted construction noise levels (LAeq, 15 minute) from SCN04, SCN07, and SCN10 are below the NML for daytime standard hours, however above the NML for daytime non-standard hours at select receptors.
- The prediction construction noise levels (LAeq, 15 minute) for all scenarios i.e. SCN01 to SCN30 are below the HNML (75 dBA) for all residential receptors.
- In accordance with the AMMM, during construction scenarios where noise levels exceed the NML for daytime standard hours, Project Notification, Specific Notification / Individual Briefing and Verification Monitoring will be required at the closest and most affected receptors.
- In accordance with the AMMM, during construction scenarios where noise levels exceed the NML for daytime non-standard hours, Project Notification and Verification Monitoring will be required at the closest and most affected receptors. It should be noted that some commercial and industrial receptors may not be operational during daytime non-standard hours, this will be determined through community consultation.

5.1.2 Summary of Findings

The predicted noise levels summarised above in **Table 5-2** to **Table 5-4** and presented in **Appendix C** are typical of construction works and activities undertaken in the vicinity of residential, industrial and commercial land use precincts. These predicted values do not represent a constant noise emission that would be experienced by the community on a daily basis throughout the Project's construction schedule.

The predicted noise levels will only be experienced for limited periods of time when works are occurring; they will not be experienced over the whole assessment period (e.g. daytime, evening or night time periods). Construction noise emissions will be temporary and do not represent a permanent impact on the community and the surrounding environment.

Some noise from construction sites is inevitable, such that the ICNG focuses on minimising construction noise impacts, rather than only on achieving numeric noise levels. These results and noted exceedances identify that best-practice construction noise management and control techniques will be required to reduce noise levels as far as practicable. To minimise impacts, additional noise control, mitigation and management measures may also be warranted, refer **Chapter 7**. These will need to be implemented in conjunction with community and stakeholder consultation and notification processes outlined in the AMMM in **Section 4.5**.

Page 41

5.1.3 Additional Mitigation and Exceedances

Where the predicted construction noise levels are above the NML, the AMMM identified in Section 8 of the CNVS and **Section 4.5** of this CNVIS should be implemented. Predicted values at select receptors exceed the project-specific NML. The level by which they exceed the NML varies depending on the assessment scenario, the receptor proximity to the activity and the time of day.

A comparison of the predicted construction noise levels to the NML is required to establish the necessary mitigation AMMM requirements. This comparison is provided in **Appendix C**.

Any noise level exceedance of the AMMM thresholds (refer **Table 4-9**) is highlighted in red, blue, olive green or purple to illustrate the extent and level of AMMM required.

The AMMM is only applicable to commercial or other sensitive receptors (e.g. offices / places of worship) when these receptors are in use it should be noted that these receptors may not be in use during all OOHW periods. Specific mitigation measures will be determined in consultation with nearby receptors as detailed in **Section 7.2.2** and will be managed, on an ongoing basis throughout the community consultation process, as the project progresses.

Guidance Note

During construction works, actual noise levels will vary depending on the number of items of equipment, their exact location within the site, their usage and how many items of equipment operate concurrently at any one time. A receptor will, therefore, experience a range of noise levels. Construction noise level predictions have been conducted to identify results for representative worst-case scenarios, as the predicted values consider the cumulative emission (and potential impact) of all equipment sources working concurrently.

It is not possible or warranted to reflect potential impacts, to model every plausible activity, task or usage for each noise generating source and location, hence the conservative approach adopted here has been applied to ensure that representative realistic worst-case noise predictions were conducted.

Furthermore, area sources were utilised to reflect the potential distribution of noise across the Project area, and the potential emissions from activities undertaken at various locations within and around the site.

This assessment has considered standard good practice mitigation measures via noise modelling by adopting the midpoint values for all sound power levels. However, it should also be noted that the predicted noise levels presented in **Appendix C** have not considered the recommended project-specific mitigation and management measures outlined in Section 8 of this CNVIS.

With the implementation of the recommended mitigation and management measures outlined in **Chapter 7** a reduction in the predicted noise levels would be expected.

Extent of Additional Mitigation

The locations at which additional mitigation measures should be implemented will vary within for each phase of work. Not all receptors will qualify for the same level of mitigation, and some receptors do not require further consideration for any additional mitigation measures (i.e. if predicted impacts are below management levels).

The additional mitigation is generally limited to the closest buildings (e.g. first row of buildings) situated in the vicinity of the Project, as identified in the results presented in **Appendix C**.

Therefore, it is recommended that the type and extent of any additional mitigation measures be established in accordance with the requirements of the CNVS but evaluated in the context of the broader community consultation program i.e. in conjunction with community and stakeholder consultation and notification processes.

For example, regular community consultation will be undertaken such as meetings, newsletters, factsheets, notifications and the TfNSW website for project updates. Additional mitigation/management

measures would be re-considered, where work conditions change or if a complaint or concern is raised about a particular phase of works.

Furthermore, these measures should be validated during the preparation of the CNVMP (and any subsequent out-of-hours work applications) and confirmed to be suitable and effective during works.

Working Outside Standard Hours

With due regard to the AMMM, the extent of additional mitigation required will increase for out-of-hours work (refer Appendix C) compared to that assessed for works within the standard hours. More mitigation is necessary for accordance with the CNVS for works undertaken outside the recommended standard hours for construction. This feature is a well-accepted element of good industry practice construction noise management; high noise generating activities should be avoided in the evening, at night and on the weekends as receptors are generally more sensitive during those periods.

In accordance with the requirements of the ICNG and the CNVS suitable recommendations, which can be practically implemented on site, should be provided in the CNVMP. Construction noise levels will be reduced and impacts minimised with the successful implementation of these recommendations. Impacts may not be reduced to negligible levels for all receptors during all construction activities; however, the recommendations are designed to ensure that any residual impacts are minimised as far as is practically achievable.

Additionally, a project briefing conducted by the Australian Turf Club (ATC) concluded that high noise impact works (e.g. impulse or tonal noise emissions) shall be limited to recommended standard hours (as defined in **Section 7.3**), starting no earlier than 8am. This will be in line with the scheduled finish of track work as advised by the ATC.

5.2 **Construction Road Traffic Noise**

In accordance with the RNP and the CNVS (as outlined in Section 4.2), construction traffic NMLs are set at 2 dBA above the existing road traffic noise levels during the daytime and night-time periods and are considered appropriate to identify the onset of potential noise impacts. Where the road traffic noise levels are predicted to increase by more than 2 dBA as a result of construction traffic, consideration would be given to applying feasible and reasonable noise mitigation measures to reduce the potential noise impacts and preserve acoustic amenity.

Based on information provided in the Technical Paper 3 of the EIS (Parramatta Light Rail Construction Traffic and Transport Impact Assessment Report, prepared by GTA Consultants, dated August 2017). it is understood that construction traffic haulage routes are expected to be along James Ruse Drive and Grand Avenue. It is estimated that a maximum of 103 heavy vehicle movements (inbound and outbound) and 334 light vehicle movements may be required each day during the construction period.

Due to the high volume of traffic movement on James Ruse Drive, it is anticipated that construction road traffic noise associated with the Project is very likely to comply with the 2 dBA increase allowance. Therefore, residential receptors along the James Ruse Drive haulage route are not likely to notice an increase in the average road traffic noise levels during construction.

The Roads & Maritime Services Construction Road Traffic Noise Estimator was used to confirm compliance with the 2 dBA increase allowance. A screen shot of the construction traffic noise calculation is presented in Figure 5-1 below. The following assumptions were input into the Construction Road Traffic Noise Estimator.

- All day traffic volume on James Ruse Drive 32,569 for northbound traffic and 46,391 for southbound traffic (traffic volumes extracted from Roads & Maritime Services Traffic Volume Viewer website, 2018 numbers at counter station id: 72013).
- The daytime (7am to 10pm) traffic volume is assumed to be 62.5% of the total all day traffic and the night-time (10pm to 7am) traffic volume is assumed to be 37.5% of the total all day traffic.
- Heavy vehicle volumes are assumed to be 10% of the total traffic volume in each direction for each period.

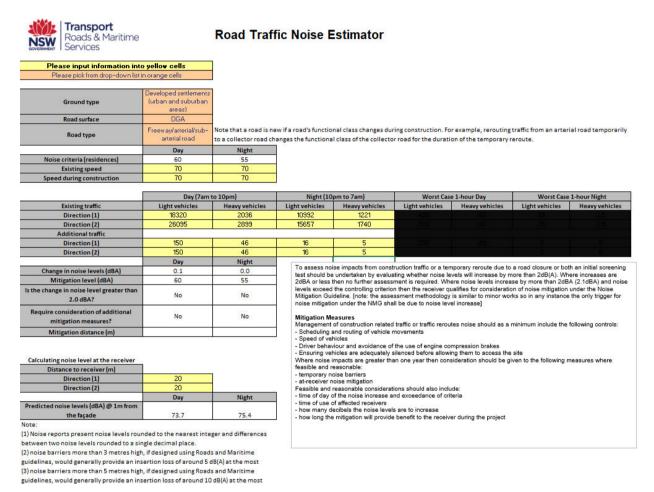

Project No.: 0549455

While no night-time works are anticipated during the SAM Facility works, 10% of the Project traffic volumes have been assumed to occur during the night-time period to account for vehicles arriving to site prior to 7am.

Given that there are no residential receptors along Grand Avenue, the assessment of construction road traffic noise will not be required as the RNP criteria are only applicable to residential receptors.

From the above assessment, management or mitigation measures to control construction road traffic noise associated with the Project will not be required.

Figure 5-1 Construction Road Traffic Noise Estimator - James Ruse Drive

5.3 **Potential Cumulative Impacts**

Project No.: 0549455

As noted in **Chapter 4**, the NML is based on existing noise levels measured at locations surrounding the site and focus on the direct impacts from the site under assessment. Furthermore, cumulative construction noise impacts are beyond the control of LORAC, are temporary in most circumstances.

Cumulative impacts may occur with other construction projects proposed for the area, therefore due care may be required of consent authorities to manage any works occurring concurrently. Where issues arise associated with nearby construction works (e.g. other contractors associated with PLR) cumulative impacts will be managed through the community consultation process as outlined in **Section 2.7**. In accordance with CoA - E32, LORAC must consult with proponents of other construction works in the vicinity of the Project and take reasonable steps to coordinate works to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receptors. Cumulative impacts involving works conducted by non PLR contractors should also be considered and managed as far as practicable.

6. VIBRATION IMPACT ASSESSMENT

This chapter outlines the ground-borne vibration impact assessment results and findings as relevant to the Project.

6.1 Construction Vibration

With respect to the construction plant identified in the assessment scenarios presented in **Appendix B**, the highest levels of vibration would be expected to occur due to construction activities involving vibratory rollers, excavators with hydraulic hammers and bored piling/drilling. Handheld vibration generating equipment have also been considered for this assessment including; Jackhammers, Compactors / Whacker Packers and Concrete Vibrators.

These activities have been identified to occur during the following scenarios; SCN03, SCN04, SCN05, SCN06, SCN08, SCN09, SCN10, SCN11, SCN13, SCN14, SCN15, SCN17 and SCN29. A summary of these scenarios is provided in **Appendix B**.

As outlined in **Section 2.5**, the vibration was assessed based on the applicable safe work distances published in the TfNSW CNVS. These safe working distances are outlined in **Table 6-1** below. For handheld vibration generating equipment not listed in the CNVS, the safe working distances for Jackhammer has been adopted.

Table 6-1 Ground-Borne Vibration Safe Working Distances

Plant Item	Rating / Description	Safe Working Distance – metres (m)			
		Cosmetic Damage (BS 7385)	Human Comfort (BS 6472)		
Vibratory Roller	< 50 kN (Typically 1-2 tonnes)	5 m	15 m to 20 m		
	< 100 kN (Typically 2-4 tonnes)	6 m	20 m		
	< 200 kN (Typically 4-6 tonnes)	12 m	40 m		
	< 300 kN (Typically 7-13 tonnes)	15 m	100 m		
	> 300 kN (Typically 13-18 tonnes)	20 m	100 m		
	> 300 kN (> 18 tonnes)	25 m	Human Comfor (BS 6472) 15 m to 20 m 20 m 40 m 100 m 100 m 7 m 23 m 73 m 20 m n/a 50 m Avoid contact with		
Small Hydraulic Hammer	(300 kg - 5 to 12t excavator)	2 m	7 m		
Medium Hydraulic Hammer	(900 kg – 12 to 18t excavator)	7 m	23 m		
Large Hydraulic Hammer	(1600 kg - 18 to 34t excavator)	22 m	73 m		
Pile Driver - Vibratory	Sheet Piles	2 m to 20 m	20 m		
Piling Rig - Boring	≤ 800 mm	2 m (nominal)	n/a		
Piling Rig - Hammer	12 t downforce	15 m	50 m		
Jackhammer	Handheld	1 m (nominal)	Avoid contact with structure		

Source: CNVS

6.1.1 Discussion of Results

As noted above vibration intensive equipment/plant are anticipated to be used in thirteen (13) separate construction work scenarios. Where reasonable and feasible all vibration intensive works should be undertaken outside the cosmetic damage (BS7385) safe working distances to avoid structural vibration impacts.

The nearest receptors that would potentially be impacted by the vibration of the Project's construction activities are the industrial buildings to the north, across Grand Avenue, and the James Hardie Research Centre building to the south of the Project site.

The industrial buildings to the north are approximately 50 metres from the northern boundary of the Project site, and the James Hardie Research Centre building is approximately 20 metres from the southern boundary of the Project site.

As the nearest residential receptors are approximately 800 metres from the Project site, vibration impacts are assessed be negligible and are deemed to comply with the VMLs for residential receptors.

Grand Avenue Industrial Buildings (North of Project Site)

Based on the separation distances between the Grand Avenue buildings to the nearest boundary of the Project site, vibration impacts are likely to comply with the building damage VMLs but likely to exceed the human comfort VMLs. The human comfort VMLs are likely to be exceeded if a heavy vibratory roller (≥ 7 tonnes) or a large hydraulic hammer is used. It is recommended that vibration intensive works conducted near or at the northern boundary should either:

- use a light vibratory roller (< 7 tonnes) and a small or medium hydraulic hammer during the Project works; or
- adhere to the safe working distances presented Table 6-1 during the Project works.

James Hardie Research Centre (South of Project Site)

Due to the close proximity of the James Hardie Research & Product Development Centre (James Hardie) building to the Project, vibration impacts have the potential to exceed the critical sensitive scientific equipment vibration criterion and human comfort VMLs, but are likely to comply with the cosmetic damage VMLs. The cosmetic VMLs will comply provided vibratory roller > 18 tonnes is not used during the Project works.

Adherence to the safe working distances for human comfort might not be a practical measure to achieve levels below the sensitive scientific equipment vibration criterion and human comfort VMLs. The refore it is recommended that the vibration monitoring strategy outlined in **Section 4.4.3** be implemented to ensure that the most stringent VMLs for sensitive equipment are achieved. Adopting this approach will also ensure that human comfort VMLs are achieved.

Attended vibration measurements will be required at the commencement of vibration generating activities (in close proximity to the James Hardie Building) to confirm that vibration levels satisfy the criteria for that vibration generating activity.

As outlined in **Section 4.4.3**, continuous vibration monitoring with audible, visible and SMS alarms is also recommended at the nearest sensitive receivers whenever vibration generating activities need to take place inside the calculated safe-working distances. This monitoring strategy will need to be implemented in conjunction with community and stakeholder consultation and notification processes outlined in the AMMM for ground-borne vibration in **Section 4.5**.

Guidance Note

This assessment has utilised the safe work distances for the vibration generating construction activities and equipment established with due regard to the Project. The Project safe work distances were derived from BS7385 as relevant to cosmetic damage to buildings.

BS7385 is a frequency (Hz) dependant criterion (less stringent at higher frequencies) and as such, works and activities may be able to occur at distances closer than those nominated in **Table 6-1** without any cosmetic or structural damage impacts occurring. Monitoring will be required during vibration intensive activities to establish compliant levels during the early stages of the Project works.

6.1.2 Summary of Findings

Best-practice construction vibration management and control techniques should be implemented to reduce vibration levels as far as practicable. Recommendations for mitigation and management measures in relation to ground-borne vibration are outlined in Chapter 7.

To minimise impacts to human comfort, additional mitigation and management measures will also be warranted. These will need to be implemented in conjunction with community and stakeholder consultation and notification processes outlined in the AMMM for Ground-borne Vibration in Section 4.5.

For works outside the recommended standard hours for construction, letterbox drops, monitoring and a range of other additional mitigation measures from the AMMM will be required at the most affected locations during select construction activities associated with the Project.

7. RECOMMENDATIONS

This chapter presents any recommendations for construction noise and/or vibration mitigation, community consultation, management measures or monitoring options.

The focus of this section is construction noise and vibration associated with the Project that has the potential to generate impacts at the closest and/or potentially most affected sensitive receptors or structures. Recommendations implemented to minimise impacts that these receptors will also assist to minimise impacts on the broader community.

The project-specific mitigation measures (refer **Section 7.2**) have been defined based on the activities proposed and potential impacts. "Standard" mitigation (and practices) applicable to the Project are described in **Section 7.1** below.

7.1 Standard Mitigation Measures

The overall objective of construction noise and vibration management is to limit impacts on nearby receptors. This can be achieved by implementing the requirements of the CNVS which reflects the intent and purpose of the ICNG. Therefore, the following hierarchical approach should be used as far as practicable:

- Where site noise levels are above goals or criteria, implement reasonable and feasible good practice environmental controls to minimise noise and vibration emissions and/or exposure duration at affected receptors.
- Where the use of best practice environmental control mitigation measures do not adequately address exceedances of goals or criteria, adopt alternative measures to minimise impacts on the community.
- Liaise with the local community regarding scheduled works which are predicted to have increased impacts.

It is recommended that the standard noise mitigation measures presented in Section 8 of the CNVS be adopted for all works undertaken as part of the Project. The management, source control and path control measures applicable to air-borne noise should be implemented.

Prior to the commencement of works, a Construction Noise and Vibration Management Plan (CNVMP) should be prepared and implemented in accordance with the requirements of the CNVS and this CNVIS. The CNVMP should take into consideration measures for reducing the source noise levels of construction equipment by construction planning and equipment selection where reasonable and feasible. The CNVMP should outline the commitments LORAC will make on the implementation of the mitigations and management measure recommended in this CNVIS.

7.2 Project Specific Mitigation/Management Measures

In addition to the measures set out in Section 8 of the CNVS, any specific mitigation measures are to be identified in the CNVMP. The following project-specific mitigation/management measures should be implemented to minimise impacts as far as is feasible and reasonable. It is recommended that:

- In accordance with CoA E27, Highly Noise Intensive Works that result in an exceedance of the applicable NML at the same receptor must only be undertaken:
 - 1. Between the hours of 8:00 am to 6:00 pm Monday to Friday.
 - 2. Between the hours of 8:00 am to 1:00 pm Saturday.
 - 3. In continuous blocks not exceeding three (3) hours each with a minimum respite from those activities and works of not less than one (1) hour between each block.

As per Table 1 of the CoA, Highly Noise Intensive Works include rock breaking, rock hammering, sheet piling, pile driving and any similar activity.

- Any site buildings, equipment or other useful obstacles/objects should be positioned to act as a temporary barrier to minimise noise emissions towards the residential receptors situated in the first row of buildings surrounding the Project. Other barriers such as temporary enclosures should also be used. Site emissions may be reduced by these barriers by between approximately 3 dBA and 6 dBA where they can break line of site.
- All mechanical plant and equipment are to be selected to provide quieter and less vibration emitting construction methods where feasible and reasonable. Quieter mechanical plant and equipment should be selected where feasible and reasonable.
- All mechanical plant and equipment are to be silenced by the best practical means using current technology (where reasonable and feasible). Mechanical plant, including noise-suppression devices, should be maintained to the manufacturer's specifications. Internal combustion engines are to be fitted with a suitable muffler in good repair.
- Extended periods (e.g. >3 hours) of high noise level generating plant, equipment or machinery (excavators, hand tools, grinders etc.) should be avoided.
- The site and staging works are proactively managed to avoid unnecessary clustering of plant, equipment or machinery near receptors.
- The site should be orientated to minimise the need for reversing of equipment or vehicles, particularly during any out-of-hours work. Furthermore, non-tonal or broadband movement/reversing warning systems (such as reversing squawker) for equipment and vehicles should be utilised, especially if they will operate during OOHW or for extended periods or in close proximity to the most affected receptors. Occupational health and safety requirements for use of warning systems must be followed.
- All plant, equipment or machinery (and heavy vehicles, trucks etc.) should be turned off when not in immediate use.
- In accordance with CoA E31 noise generating works near places of worship, educational institutions and noise and vibration-sensitive businesses and critical working areas (such as theatres, laboratories, operating theatres, and mental health services and accommodation) must not be timetabled within sensitive periods, unless otherwise agreed with the affected institutions, and at no cost to the affected institution. This must be determined through ongoing consultation with the community during construction. It is understood that the only receptor that this CoA would be applicable to is the adjoining James Hardie Research & Product Development Centre (James Hardie).
- In accordance with CoA E33 construction noise mitigation measures must be implemented in accordance with Tables 4, 5, 6 and 7 of the CNVS, regardless of the number of sensitive receivers impacted.
- Vibration monitoring is undertaken at the James Hardie building at the commencement of vibration generating activities to confirm that vibration levels satisfy the criteria for that vibration generating activity. It is also recommended that the vibration monitoring strategy outlined in **Section 4.4.3** be implemented to ensure that the most stringent VMLs for sensitive equipment are achieved. Adopting this approach will also ensure that human comfort VMLs are achieved.
- Continuous vibration monitoring with audible, visible and SMS alarms should be conducted at the nearest sensitive receivers whenever vibration generating activities need to take place inside the calculated safe-working distances.
- In accordance with CoA E42(q) the following shall be implemented: internal noise audits including recording of daily hours of construction, progressive impact assessments, informal checks by the AA, providing active and communication links to Council and surrounding residents and sensitive receivers. Along with a number of other communication techniques (e.g. meetings and newsletters)

Page 49

TfNSW has established a project website: www.parramattalightrail.nsw.gov.au. TfNSW will post information about the project on the website as an active communication link.

A summary of the AMMM triggered by construction noise emissions from The Project has been presented in Table 7-1.

Table 7-1 AMMM Summary

Scenario	Triggered Measures		Applicable Receptors				
	Day Standard	Day Non- Standard					
SCN 02	PN, V, SN	-	5579, 5581				
	-	PN, V	5450, 5451, 5454, 5460, 5466, 5468, 5515, 5518, 5555 5556, 5581, 6245, 6307				
SCN 04	PN, V, SN		5581				
		PN, V	6307				
SCN 06	PN, V, SN	-	2786, 2787, 2788, 2789, 2790, 2791				
		PN, V	2774, 2775, 2776, 5447, 5450, 5451, 5454, 5460, 5466, 5504, 5515, 6245, 6307				
SCN 07	PN, V, SN	-	2788, 2789, 2790				
SCN 11	PN, V, SN	-	2785, 2786, 2787, 2788, 2789, 2790, 2791				
		PN, V	2762, 2774, 2775, 2776, 2788, 2789, 2790, 5432, 5437, 5438, 5440, 5442, 5443, 5444, 5445, 5447, 5448, 5449, 5450, 5451, 5454, 5459, 5460, 5466, 5468, 5504, 5506, 5515, 5518, 5546, 5547, 5555, 5556, 5557, 5558, 5559, 5560, 5561, 6245, 6307, 6311				

PN = Project Notification, V = Verification Monitoring, , SN = Specific notification, individual briefings, phone 1.

7.2.2 Mitigation/Management Measures identified through consultation with sensitive receptors

Community consultation is to be undertaken according to the Communication and Engagement Plan. Consultation is to be implemented and tracked through the PLR website and databases. Other methods are detailed in Table 10 of the Communication and Engagement plan. Table 8 of the Communication and Engagement Plan outlines the key site specific issues related to The Project and proposed mitigation measures.

7.2.2.1 Rosehill Gardens Racecourse

Project No.: 0549455

Early consultation with nearby receptors in accordance with CoA - E42 identified one receptor with specific mitigation/management requirements. Rosehill Gardens Racecourse is situated to the west of the project site, adjacent to Colquhoun Street. The Racecourse consists of horse stables and grandstand buildings, located on the eastern boundary of the precinct.

Version: 1.0

^{2.} Construction scenarios that did not trigger AMMM have been excluded from this table

Through consultation with this receptor, the following specific noise mitigation controls have been nominated to address the impact to the Rosehill Gardens Racecourse. A specific project briefing was held with the Australian Turf Club (ATC), the stakeholder managing Rosehill Gardens Racecourse, prior to commencing remediation activities (namely conducted under a Review of Environmental Factors) to discuss the nominated control measures. The briefing discussed an update of the project operation on the controls and communication protocols and, in particular, around specific events such as the racing calendar and shows. Measures concluded from this briefing include:

- Shade cloth shall be continuously established around the perimeter of the site as a physical barrier between the racecourse and the site.
- High noise impact, (e.g. impulsive or tonal noise emissions) shall be limited to recommended standard hours (as defined in Section 7.3), starting no earlier than 8am. This will be in line with the scheduled finish of track work as advised by the ATC.
- High noise and vibration generating activities, as measured at the boundary, may only be carried out in continuous blocks, not exceeding three hours each, with a minimum respite period of one hour between each block.

7.2.2.2 James Hardie Research & Product Development Centre

Early consultation with James Hardie prior to commencing remediation activities (previously conducted under a Review of Environmental Factors) identified no specific mitigation measure requirements for noise and vibration. However, following the pre-construction structural assessment, scientific equipment was identified and further vibration assessment was conducted.

James Hardie is a warehouse structure situated to the south of the project site, adjacent to Colquboun Street. The Research Centre is located on the southern boundary of the precinct. Through consultation with this receptor, the following specific vibration mitigation controls were nominated to address the impact to the James Hardie Research Centre:

- A Construction Vibration Impact Assessment (CVIA) was performed to determine specific vibration goals and safe working distances for vibration (ERM 2019a).
- Baseline data was collected prior to commencement of activities and project / equipment specific vibration goals (ERM 2019a).
- Vibration monitoring and ongoing consultation was carried out during enabling works and remediation activities within the safe working distances. No complaints or impacts to sensitive equipment were recorded.
- Ongoing consultation with James Hardie to determine any additional mitigation measures required as works progress.

Construction Hours 7.3

Work within the Recommended Standard Hours

Project No.: 0549455

Confining construction activities (including the delivery of plant and equipment) to the recommended standard hours for construction wherever feasible and reasonable help reduce impacts by limiting potentially noisy construction activities to the daytime, when background noise levels are higher, and by providing respite from construction noise during the evening, overnight and on weekends.

In accordance with CoA - E21, it is recommended that construction works should be limited as far as possible to the recommended standards hours for construction, these are Monday to Friday 7 am to 6 pm; Saturday 8 am to 1 pm; and no work on Sundays or public holidays.

That said, CoA - E23 states that works may be undertaken in the Camellia and Rosehill precincts 24 hours a day, seven days a week provided that sensitive receivers are not affected by noise levels of greater than 5 dBA above the rating background level at any residence in accordance with the *Interim* Construction Noise Guideline (DECC, 2009), between 10.00 pm and 7.00 am.

Works outside the Recommended Standard Hours

Any works that become necessary outside the standard hours should be justified and additional mitigation measures (refer **Section 7**) implemented to reduce noise impacts to acceptable levels.

In accordance with CoA – E23, works may be undertaken in the Camellia and Rosehill precincts 24 hours a day, seven days a week provided that sensitive receivers are not affected by noise levels of greater than 5 dBA above the rating background level at any residence in accordance with the *Interim Construction Noise Guideline* (DECC, 2009), between 10.00 pm and 7.00 am.

CoA - E25 also states that work may be undertaken outside of the hours defined in CoA - 21, but only if one or more of the following applies:

- a) For the delivery of materials required by the NSW Police Force or other authority for safety reasons;
 or
- b) Where it is required in an emergency to avoid injury or the loss of life, to avoid damage or loss of property or to prevent environmental harm; or
- c) Where different hours of works are permitted or required under an EPL in force in respect of the Project; or
- d) Works approved under the Out-of-Hours Work Protocol for works not subject to an EPL; or
- e) Construction that causes LAeq(15minute) noise levels:
 - i. No more than 5 dBA above the rating background level at any residence in accordance with the *Interim Construction Noise Guideline* (DECC, 2009), and
 - ii. No more than the 'Noise affected' noise management levels specified in Table 3 of the Interim Construction Noise Guideline (DECC, 2009) at other sensitive land uses, and
 - iii. No more than 15 dBA above the night-time rating background level at any residence during the night-time period, when measured using the L1(1 minute) noise descriptor, and
 - iv. Continuous or impulsive vibration values, measured at the most affected residence are no more than the maximum values for human exposure to vibration, specified in Table 2.2 of Assessing Vibration: a technical guideline (DEC, 2006), and
 - v. Intermittent vibration values measured at the most affected residence are no more than the maximum values for human exposure to vibration, specified in Table 2.4 of Assessing Vibration: a technical guideline (DEC, 2006).

7.4 Maximum Levels for Plant and Equipment

It is recommended that plant and equipment noise levels should not exceed the maximum allowable noise levels for construction equipment presented in Table 19 of the CNVS or those presented in this report (**Appendix B**), whichever is the lowest value. This will ensure that noise levels above those predicted here do not occur.

Where values lower than those modelled are achieved a noise level reduction to the predicted values presented in this report will occur. For example, if the equipment is selected so that an overall reduction of 10 dBA is achieved, then noise levels at nearby receptors will also reduce by approximately 10 dBA.

Page 52

7.5 Noise and Vibration Monitoring Requirements

A noise monitoring program is to be carried out for the duration of the works in accordance with the requirements specified in the CoA - C9. The methodology for any construction monitoring should be determined by a suitably qualified acoustics engineer, the findings of this CNVIS should inform the monitoring locations and frequency, amongst other key features.

Monitoring for the Project works should be implemented at the commencement of works and at regular intervals throughout the Project (i.e. when new construction activities commence) to quantify the airborne noise, ground-borne noise and vibration levels associated with construction activities. Monitoring would also be required in the event of a complaint being received and should be conducted at the most affected receptor in accordance with Appendix A of the CNVS.

Any noise monitoring that is undertaken should compare the measured site noise level contributions, determined in the absence of any influential source not associated with the Project to the predicted noise levels presented in this CNVIS.

Operator attended noise measurements are preferred (due to the influence of existing ambient noise sources) and are to be undertaken to confirm that the actual measured noise levels are consistent with the predictions in this CNVIS.

Attended noise measurements are recommended at the potentially most affected receptor(s) from the commencement of construction activities to confirm that the noise levels (air-borne and ground-borne) in the adjacent community are consistent with the predictions this CNVIS. Other potentially affected receptors should also be considered as part of the monitoring regime depending on the phase of works.

At this stage, noise monitoring should be targeted at the commencement of each new construction activity/phase of work to verify the predicted noise levels. Continued monitoring of work phases and activities would then be considered on a case by case basis, or where triggered by the AMMM.

Vibration monitoring is recommended at the commencement of vibration generating activities to confirm that vibration levels satisfy the criteria for that vibration generating activity. It is recommended that the vibration monitoring strategy outlined in **Section 4.4.3** be implemented to ensure that the most stringent VMLs for sensitive equipment are achieved. Adopting this approach will also ensure that human comfort VMLs are achieved.

Continuous vibration monitoring (attended or unattended with audible, visible and SMS alarms) should be conducted at the nearest sensitive receptors whenever vibration generating activities need to take place inside the calculated safe-working distances.

At this stage, vibration monitoring should focus on sensitive medical/scientific equipment located at the James Hardie Research Centre. Monitoring of other work phases and activities should be considered on a case by case basis (i.e. if vibration generating activities are required). Monitoring devices should be located on the James Hardie building where vibration intensive works are required within safe working distances.

8. CONCLUSION

This CNVIS was completed for LORAC to assess construction aspects of the Project as part of Stage 1 - PLR construction. The assessment was conducted to achieve a scope of works that allowed for the successful identification of potential receptors situated in the vicinity of site emission sources and identification of significant noise and vibration generating plant, equipment and/or activities associated with the Project works and their likely/known emissions. The overall assessment methodology is presented in **Chapter 2** of this report.

Existing ambient and background noise levels in the area were quantified and noise and vibration criteria developed in accordance with recognised NSW standards and guidelines as applicable to the Project activities and developed applicable assessment scenarios.

Existing background noise levels were adopted from existing investigations and described as per the information presented in **Chapter 3**. Noise assessment criteria (refer to **Chapter 4** of this report) were then developed with due regard to the existing noise levels and in accordance with recognised NSW standards and guidelines as applicable to the project works. Relevant construction assessment scenarios were developed based on project information provided and are presented in **Chapter 5**.

Following the qualitative assessment of less significant acoustical factors i.e. ground-borne noise and blasting, LAeq, 15 minute construction noise levels were predicted and compared to criteria to establish compliance, evaluate potential impacts and develop potential mitigation/management measures where necessary to reduce levels and minimise impacts.

The construction noise assessment (incl. road traffic) is presented in **Chapter 5** of this report. The construction vibration assessment is presented in **Chapter 6** of this report. The full set of noise modelling results and findings are presented in **Appendix C**.

The CNVIS identified construction noise levels have the potential to exceed the applicable criteria, limits and thresholds. Therefore, noise reducing mitigation, management measures, safeguards and/or provisions for monitoring were established for the proposed construction and are outlined in **Chapter 7** of this report. Although a number of exceedances are identified, these are associated with predicted 15 minute noise values calculated via modelling for the purposes of the assessment, in accordance with the ICNG and the CNVS. These values do not represent a constant noise emission that would be experienced by the community on a daily basis throughout the Project.

The vibration assessment concluded that best-practice construction management and control techniques should be implemented to reduce vibration levels as far as practicable. Recommendations for mitigation and management measures in relation to ground-borne vibration were then outlined in **Chapter 7** of this report. To minimise impacts to human comfort, additional mitigation and management measures will also be warranted. These will need to be implemented in conjunction with community and stakeholder consultation and notification processes outlined in the AMMM for Ground-borne Vibration in **Section 4.5**.

It is recommended that a CNVMP is prepared to outline the commitments LORAC will make on the implementation of the mitigations and management measure recommended in this CNVIS.

Construction noise and vibration levels will be reduced and impacts minimised with the successful implementation of the recommendations provided in **Chapter 7** of this report. Impacts may not be reduced to negligible levels for all receptors during all construction activities; however, the recommendations presented here will ensure that any residual impacts are minimised as far as is practically achievable. These recommendations will need to be implemented in conjunction with community and stakeholder consultation and notification processes.

Glossary - Acoustical Concepts and Terminology

What Is Noise And Vibration?

Noise

Noise is often defined as a sound, especially one that is loud or unpleasant or that causes disturbance¹ or simply as unwanted sound, but technically, noise is the perception of a series of compressions and rarefactions above and below normal atmospheric pressure.

Vibration

Vibration refers to the oscillating movement of any object. In a sense noise is the movement of air particles and is essentially vibration, though in regards to an environmental assessment vibration is typically taken to refer to the oscillation of a solid object(s). The impact of noise on objects can lead to vibration of the object, or vibration can be experienced by direct transmission through the ground, this is known as ground-borne vibration.

Essentially, noise can be described as what a person hears, and vibration as what they feel.

What Factors Contribute To Environmental Noise?

The noise from an activity, like construction works, at any location can be affected by a number of factors, the most significant being:

- How loud the activity is?
- How far away the activity is from the receiver?
- What type of ground is between the activity and the receiver location e.g. concrete, grass, water or sand?
- How the ground topography varies between the activity and the receiver? For example, is it flat, hilly, mountainous? Blocking the line of sight to a noise source will generally reduce the level of noise; and
- Any other obstacles that block the line of sight between the source to receiver e.g. buildings or purpose built noise walls.

How To Measure And Describe Noise?

Noise is measured using a specially designed 'sound level' meter which must meet internationally recognised performance standards. Audible sound pressure levels vary across a range of 10⁷ Pascals (Pa), from the threshold of hearing at 20µPa to the threshold of pain at 200Pa. Scientists have defined a statistically described logarithmic scale called Decibels (dB) to more manageably describe noise.

To demonstrate how this scale works, the following points give an indication of how the noise levels and differences are perceived by an average person:

- 0 dB represents the threshold of human hearing (for a young person with ears in good condition).
- 50 dB represents average conversation.
- 70 dB represents average street noise, for example local traffic.
- 90 dB represents the noise inside an industrial premises or factory.
- 140 dB represents the threshold of pain the point at which permanent hearing damage may occur.

¹ Copyright © 2011 Oxford University Press

Human Response to Changes in Noise Levels

The following concepts offer qualitative guidance in respect of the average response to changes in noise levels:

- Differences in noise levels of less than approximately 2 dBA are generally imperceptible in practice, an increase of 2 dBA is hardly perceivable.
- 5 dBA Differences in noise levels of around are considered to be significant.
- Differences in noise levels of around 10 dBA are generally perceived to be a doubling (or halving) of the perceived loudness of the noise. An increase of 10 dBA is perceived as twice as loud. Therefore an increase of 20 dBA is four times as loud and an increase of 30 dBA is eight times as loud
- The addition of two identical noise levels will increase the dBA level by about 3 dBA. For example, if one car is idling at 40 dBA and then another identical car starts idling next to it, the total noise level will be about 43 dBA.
- The addition of a second noise level of similar character which is at least 8 dBA lower than the existing noise level will not add significantly to the overall dBA level.
- A doubling of the distance between a noise source and a receiver results approximately in a 3 dBA decrease for a line source (for example, vehicles travelling on a road) and a 6 dBA decrease for a point source (for example, the idling car discussed above).
- A doubling of traffic volume for a line source results approximately in a 3 dBA increase in noise. halving the traffic volume for a line source results approximately in a 3 dBA decrease in noise.

Terms to Describe the Perception of Noise

The following terms offer quantitative and qualitative guidance in respect of the audibility of a noise source:

- **Inaudible / Not Audible -** the noise source and/or event could not be heard by the operator. masked by extraneous noise sources not associated with the source. If a noise source is 'inaudible' its noise level may be quantified as being less than the measured L₉₀ background noise level, potentially by 10 dB or greater.
- Barely Audible the noise source and/or event are difficult to define by the operator, typically masked by extraneous noise sources not associated with the source. If a source is 'barely audible' its noise level may be quantified as being 5 - 7 dB below the measured L₉₀ or L_{eq} noise level, depending on the nature of the source e.g. constant or intermittent.
- Just Audible the noise source and/or event may be defined by the operator. However there are a number of extraneous noise sources contributing to the measurement. The noise level should be quantified based on instantaneous noise level contributions, noted by the operator.
- Audible the noise source and/or event may be easily defined by the operator. There may be a number of extraneous noise sources contributing to the measurement. The noise level should be quantified based on instantaneous noise level contributions, noted by the operator.
- **Dominant** the noise source and/or event are noted by the operator to be significantly 'louder' than all other noise sources. The noise level should be quantified based on instantaneous noise level contributions, noted by the operator.

The following terms offer qualitative guidance in respect of acoustic terms used to describe the frequency of occurrence of a noise source during an operator attended environmental noise measurements:

- Constant this indicates that the operator has noted the noise source(s) and/or event to be constantly audible for the duration of the noise measurement e.g. an air-conditioner that runs constantly during the measurement.
- Intermittent this indicates that the operator has noted the noise source(s) and/or event to be audible, stopping and starting intervals for the duration of the noise measurement e.g. car passby's.
- Infrequent this indicates that the operator has noted the noise source(s) and/or event to be constantly audible, however; not occurring regularly or at intervals for the duration of the noise measurement e.g. a small number of aircraft are noted during the measurement.

How to Calculate or Model Noise Levels?

There are two recognised methods which are commonly adopted to determine the noise at particular location from a proposed activity. The first is to undertake noise measurements whilst the activity is in progress and measure the noise, the second is to calculate the noise based on known noise emission data for the activity in question.

The second option is preferred as the first option is largely impractical in terms of cost and time constraints, notwithstanding the meteorological factors that may also influence its quantification. Furthermore, it is also generally considered unacceptable to create an environmental impact simply to measure it. In addition, the most effective mitigation measures are determined and implemented during the design phase and often cannot be readily applied during or after the implementation phase of a project.

Because a number of factors can affect how 'loud' a noise is at a certain location, the calculations can be very complex. The influence of other ambient sources and the contribution from a particular source in question can be difficult to ascertain. To avoid these issues, and to quantify the direct noise contribution from a source/site in question, the noise level is often calculated using noise modelling software packages. The noise emission data used in may be obtained from the manufacturer or from ERM's database of measured noise emissions.

Acoustic Terminology & Statistical Noise Descriptors

Environmental noise levels such as noise generated by industry, construction and road traffic are commonly expressed in dBA. The A-weighting scale follows the average human hearing response and enables comparison of the intensity of noise with different frequency characteristics. Time varying noise sources are often described in terms of statistical noise descriptors. The following descriptors are commonly used when assessing noise and are referred to throughout this acoustic assessment:

- Decibel (dB is the adopted abbreviation for the decibel) the unit used to describe sound levels and noise exposure. It is equivalent to 10 times the logarithm (to base 10) of the ratio of a given sound pressure to a reference pressure.
- dBA the unit used to measure 'A-weighted' sound pressure levels. A-weighting is an adjustment made to sound-level measurement to approximate the response of the human ear.
- dBC the unit used to measure 'C-weighted' sound pressure levels. C-weighting is an adjustment made to sound-level measurements which takes account of low-frequency components of noise within the audibility range of humans.
- dBZ or dBL the unit used to measure 'Z-weighted' sound pressure levels with no weighting applied, linear.

- Hertz (Hz) the measure of frequency of sound wave oscillations per second. 1 oscillation per second equals 1 hertz.
- Octave a division of the frequency range into bands, the upper frequency limit.
- 1/3 Octave single octave bands divided into three parts.
- L_{eq} this level represents the equivalent or average noise energy during a measurement period. The L_{eq, 15 minute} noise descriptor simply refers to the L_{eq} noise level calculated over a 15 minute period. Indeed, any of the below noise descriptors may be defined in this way, with an accompanying time period (e.g. L_{10, 15 minute}) as required.
- L_{max} the absolute maximum noise level in a noise sample.
- L_N the percentile sound pressure level exceeded for N% of the measurement period calculated by statistical analysis.
- L₁₀ the noise level exceeded for 10 per cent of the time and is approximately the average of the maximum noise levels.
- L₉₀ the noise level exceeded for 90 per cent of the time and is approximately the average of the minimum noise levels. The L₉₀ level is often referred to as the "background" noise level and is commonly used as a basis for determining noise criteria for assessment purposes.
- Sound Power Level (Lw) this is a measure of the total power radiated by a source. The Sound Power of a source is a fundamental property of the source and is independent of the surrounding environment.
- Sound Pressure Level (L_P) the level of sound pressure; as measured at a distance by a standard sound level meter with a microphone. This differs from Lw in that this is the received sound as opposed to the sound 'intensity' at the source.
- **Background noise** the underlying level of noise present in the ambient noise, excluding the noise source under investigation, when extraneous noise is removed. This is described using the L90 descriptor.
- **Ambient noise** the all-encompassing noise associated within a given environment. It is the composite of sounds from many sources, both near and far. This is described using the Leq descriptor.
- Assessment Background Level (ABL) is a single figure background level representing each assessment period (day, evening and night). Its determination is by the tenth percentile method, of the measured L₉₀ statistical noise levels.
- Rating Background Level (RBL) is the overall single figure background level representing each assessment period (day, evening and night) over the whole monitoring period (as opposed to over each 24 hour period used for the ABL). This is the level used for assessment purposes. It is the median value of:
- All the day assessment background levels over the monitoring period for the day;
- All the evening assessment background levels over the monitoring period for the evening; or
- All the night assessment background levels over the monitoring period for the night.
- Cognitive noise noise in which the source is recognised as being annoying.
- **Masking** the phenomenon of one sound interfering with the perception of another sound. For example, the interference of traffic noise with use of a public telephone on a busy street.

- Extraneous noise noise resulting from activities that are not typical of the area. Atypical activities may include construction, and traffic generated by holiday periods and by special events such as concerts or sporting events. Normal daily traffic is not considered to be extraneous.
- Most affected location(s) locations that experience (or will experience) the greatest noise impact from the noise source under consideration. In determining these locations, one needs to consider existing background levels, exact noise source location(s), distance from source (or proposed source) to receiver, and any shielding between source and receiver.
- Noise criteria the general set of non-mandatory noise level targets for protecting against intrusive noise (for example, background noise plus 5 dB) and loss of amenity (for example, noise levels for various land uses).
- Noise limits enforceable noise levels that appear in conditions on consents and licences. The noise limits are based on achievable noise levels which the proponent has predicted can be met during the environmental assessment. Exceedance of the noise limits can result in the requirement for either the development of noise management plans or legal action.
- Project Specific Noise Levels target noise levels for a particular noise generating facility. They are based on the most stringent of the intrusive criteria or amenity criteria. Which of the two criteria is the most stringent is determined by measuring the level and nature of existing noise in the area surrounding the actual or propose noise generating facility.
- Compliance the process of checking that source noise levels meet with the noise limits in a statutory context.
- Non-compliance development is deemed to be in non-compliance with its noise consent/ licence
 conditions if the monitored noise levels exceed its statutory noise limit by more than 2 dBA, dBC
 or dBZ.
- Feasible and Reasonable measures feasibility relates to engineering considerations and what is practical to build. reasonableness relates to the application of judgement in arriving at a decision, taking into account the following factors:
 - Noise mitigation benefits (amount of noise reduction provided, number of people protected);
 - Cost of mitigation (cost of mitigation versus benefit provided);
 - Community views (aesthetic impacts and community wishes);
 - Noise levels for affected land uses (existing and future levels, and changes in noise levels).
- Meteorological Conditions wind and temperature inversion conditions.
- **Temperature Inversion** an atmospheric condition in which temperature increases with height above the ground.
- Adverse Weather weather effects that enhance noise (that is, wind and temperature inversions) that occur at a site for a significant period of time (that is, wind occurring more than 30% of the time in any assessment period in any season and/or temperature inversions occurring more than 30% of the nights in winter).

Operator Attended Noise Measurements

Table A. 1 below presents typical abbreviations that are used to describe common noise sources that may be noted during environmental noise measurements.

Table A1 General Field Note Abbreviations

Noise Source	Abbreviation
'Wind-blow n vegetation'	WBV
'Car pass-by'	СР
'Operator Noise'	OP
'Animal Noise'	AN
'Distant Traffic'	DT
'Near Traffic'	NT
'Aircraft Noise'	AN
'Metal on Metal contact'	MMC

During operator attended noise measurements, the sound level meter will present the instantaneous noise level and record acoustical and statistical parameters. In certain acoustical environments, where a range of noise sources are audible and detectable, the sound level meter cannot measure a direct source noise level and it is often necessary to account for the contribution and duration of the sources.

Noted Percentile Contribution – Table A.2 presents noise level deductions that are typically applied based on the percentage contribution of a noise source(s). Noted Time Contribution - Table A.3 presents noise level deductions that may be applied based on the percentage of time that a noise source(s) is audible during a 15 minute measurement.

Where the noise emission from a source is clearly detectable and the contribution can be measured, these deductions are not necessary.

Table A2 Noise Level Deductions - Noted Percentile Contribution

Percentage Contribution	Noise Level Adjustment, dBA
5%	-13.0
10%	-10.0
15%	-8.2
20%	-7.0
25%	-6.0
30%	-5.2
35%	-4.6
40%	-4.0
45%	-3.5
50%	-3.0
55%	-2.6
60%	-2.2
65%	-1.9

Project No.: 0549455

Percentage Contribution	Noise Level Adjustment, dBA
70%	-1.5
75%	-1.2
80%	-1.0
85%	-0.7
90%	-0.5
95%	-0.2
100%	0.0

^{1.} **EXAMPLE**: the measured Leq. 15 minute noise level is 49 dBA and the site contribution was observed to be 10% of this level (extraneous noise sources were noted to dominate the measurement), therefore the Leq, 15 minute noise level deduction is 10 dBA, with a resultant noise level contribution of approximately 39 dBA.

Table A3 Noise Level Deductions - Noted Time Contribution

Event Duration (minutes)	Noise Level Adjustment, dBA
1	-11.8
2	-8.8
3	-7.0
4	-5.7
5	-4.8
6	-4.0
7	-3.3
8	-2.7
9	-2.2
10	-1.8
11	-1.3
12	-1.0
13	-0.6
14	-0.3
15	0.0

EXAMPLE: the measured Leq. 15 minute noise level contribution of an excavator was noted to be 56 dBA, however it was only audible for six minutes during the 15 minute measurement period, therefore the Leq, 15 minute noise level deduction is 4 dBA, with a resultant noise level contribution of approximately 52 dBA.

Ref: 5518_PLR1SOM-GLR-CNVIS SAMF Rev1_AA_Endorsement_5July2021 5 July 2021

RE: PLR1SOM-GLR (CNVIS - SaMF) Adequacy for Submission (AA Review)

, Appointed Acoustic Advisor (AA), reviewed the following documentation with regard to the PLR – Stage 1 project:

Title:	Document	Version	Review
	Reference:	Status	Date
Parramatta Light Rail - Stabling and Maintenance (SAM) Facility Construction Noise and Vibration Impact Statement (CNVIS)	rpt-002001.01.s3.01.01-	Version 1.0 12-03-21	02-07-2021

Pursuant to the requirements of the Conditions of Approval for the CSSI-8285, including A29(e), the CNVIS documents identified above have been reviewed by the AA for consistency with the CNVS and requirements of the CoA and EPL (Environmental Protection Licence – 21347, 3-Jan-2020).

The review confirms the documents have incorporated the recommendations and changes requested by the AA, in ensuring the documents meet the acoustic requirements of the Terms of Approval (NSW Government – Infrastructure Approval (Application No.: SSI 8285)), requirements of the EPL, as well as best practice methodologies for acoustics.

Yours sincerely		
Senior Environmental Engineer		

Appendix J – Consistency Assessment Approval (TfNSW Template – if required)

Senior Manager Environment
Parramatta Light Rail

Review of Site Establishment Management Plan – Ancillary Facilities
Supply, Operate and Maintain (SOM) Contract (Package 5) Parramatta Light Rail
(PLR1SOM-GLR-ALL-PE-PLN-001002 Rev 0)

Pursuant to SSI8285 Condition of Approval A23 (d) i), as the approved Environmental Representative, I confirm that I have reviewed the Site Establishment Management Plan – Ancillary Facilities, Supply, Operate and Maintain (SOM) Contract (Package 5) Parramatta Light Rail (PLR1SOM-GLR-ALL-PE-PLN-001002 Rev 0), dated 12 May 2021, prepared by Great River City Light Rail, for consistency with the requirements of the Conditions of Approval.

In my opinion the aforementioned document is consistent with the requirements included in or required under the terms of the Conditions of Approval for the Parramatta Light Rail (Stage 1) development.

Yours sincerely,		
Environmental Representative
